

FUTURETIME: MICRO HOMES

What we learned today:

We explored how people in the past, present, and future have solved housing challenges when space runs out! From ancient Roman apartment buildings to modern tiny homes and even 3D-printed houses, students imagined and designed their own creative micro-homes for the year 2053 — homes that could move on wheels, float on water, or even fit in a parking spot.

Quiz your family!

Which building material is being researched for its ability to repair itself?

- A) Self-healing concrete
- B) Self-healing glass
- C) Rice Krispie Treats

Ask your family

“If our cities keep getting more crowded, where do you think people will live in the future?”
