

Cloud Migration

SOFTWARE LICENSE READINESS

Partner with Strategic Advisors for Cloud Risk Mitigation and Optimization

According to Gartner, the cloud migration services market is expected to reach \$448.34B by 2025, up from \$182.4B in 2018. Although the cloud provides a plethora of benefits for many organizations, cloud migrations often result in non-compliance of existing IT supplier contracts and software licenses, along with excessive spend.

Companies need to proactively mitigate supplier and financial risk when moving to the cloud. Being unprepared increases the likelihood of violating licensing rights, grants and current entitlements, resulting in significant fees owed to vendors. In addition, once companies stand up application workloads in the public cloud (SaaS included), they tend to lack the governance to optimize usage, leading to overspend or waste.

Compliance Expertise from On-premise to the Cloud

By partnering with Connor Consulting, your company can identify potential non-compliance issues ahead of any public cloud installations, which can help save you millions of dollars in IT vendor fees. We also provide actionable data (through partner technologies) and recommendations on how to best optimize your existing software licenses, hardware, virtual CPUs, and storage in any target cloud environment within 7-10 business days.

Software Contract Assessments

Cloud Compliance Reviews

Cloud Optimization & Spend Governance

Client Benefits & Outcomes

Financial

- Maximize ROI from investments
- Reduce supplier Total Cost of Ownership

Operational
