emissions

ABOUT THE CUSTOMER

As the first UK cricket club to join the Race 2 Zero initiative, Gloucestershire County Cricket Club are dedicated to sustainability and proactively work to reduce their carbon emissions.

THEIR AIMS

Gloucestershire County Cricket Club teamed up with measurable.energy to move closer to their goal of becoming the UK's greenest cricket venue.

HOW WE HELPED

Gloucestershire County Cricket Club's energy management partner Amber, introduced measurable.energy to tackle the significant energy consuming area of plug power.

measurable.energy's technology automatically detects and eliminates wasted plug power — energy used by devices like bottle fridges, heaters, TVs, AV equipment, coffee machines, and water heaters that are often left on or in standby mode overnight.

"The immediate impact we've seen just by plugging devices into the sockets shows how small changes can make a big difference."

eliminating wasted energy in buildings
