

Multi-storey Primary School Learning Centres

Education

ATCO Structures worked with the Victorian School Building Authority (VSBA) to design and install, a total of seven modular two-storey classroom buildings, and five male and female toilet blocks at a primary school located in metropolitan Melbourne.

The classrooms measuring at 77 m² each, feature large windows, high ceilings, easy-clean surfaces, and concetina walls creating a light-filled, healthy, flexible learning space that inspires students and enhances pedagogies.

The exterior of the buildings feature Colorbond cladding and textured metal screens to increase street appeal and blend in with existing school facilities.

The installation took place over three separate dates from 2022 to 2025. ATCO Structures provided a full turnkey service including access ramps and stairs, tactile paving, concrete paths, retaining walls, and connection of utilities.

Snapshot

Location: Metro Melbourne

Date: January 2025
