

Retrofit solutions

Reinventing Reliability

From upgrade to transformation

Whether it's X-fold, flowwrap, robotics or complete packaging, lines we deliver retrofit solutions that go beyond simple upgrades. From individual machine improvements to full line transformations, we help you unlock the full potential of your existing equipment while preparing your production for future demands.

Extend lifetime. Boost performance.

Through intelligent upgrades, we significantly extend the lifetime of your machinery while enhancing speed, precision and overall output. By reusing and upgrading existing equipment instead of replacing it, retrofit supports a more circular approach and helps reducing waste while delivering measurable performance gains.

In-house expertise, full control

Thanks to our in-house mechanical, electrical and software engineering and component production, we move quickly and maintain full control over quality. This independence from external suppliers reduces transport flows, lowers associated costs and limits environmental impact while ensuring shorter lead times and solutions tailored exactly to your production needs.

Seamless integration, lasting partnership

Whether through on-site interventions or fully rebuilt retrofit machines, we guarantee minimal disruption with maximum impact. Every solution is designed to operate as one aligned system, fully integrated into your existing production environment and completely supported by our commitment as your long-term partner.

Powered by best-in-class automation partners

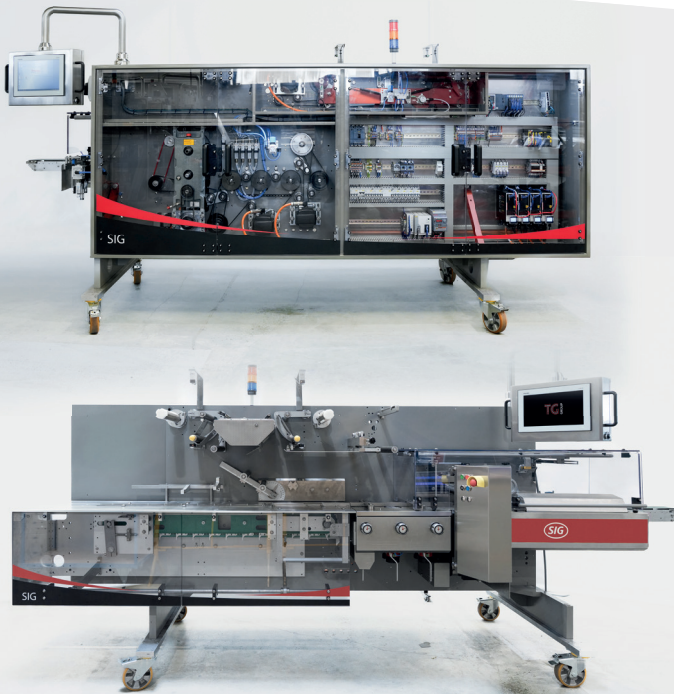

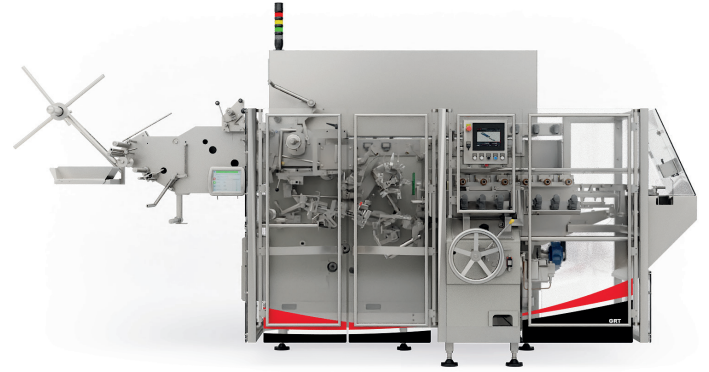

Bosch Rexroth · Sigmatek · Beckhoff · B&R · Siemens

Extensive expertise across leading packaging technologies

Rotzinger, Demarex, Syntegon, Bosch, SIGpack, Tevopharm and more

SIG X-fold machines

SIG X-fold machines, such as SIG GRT or GS series are robust and reliable X-fold machines known for its durable construction and reliable performance across a wide range of products. Its straightforward mechanical design makes it an ideal candidate for retrofit, enabling targeted upgrades in controls, precision and efficiency.

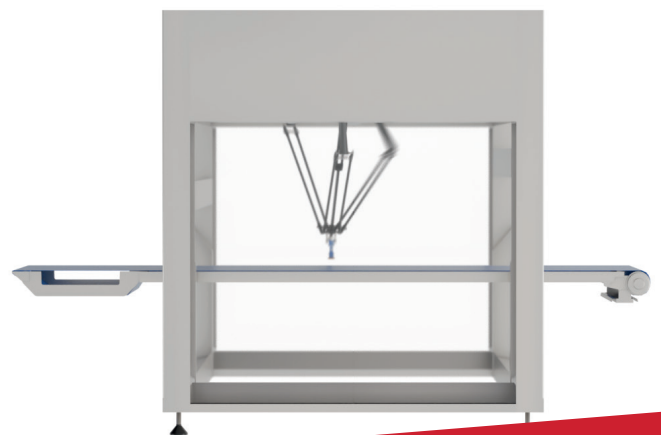

SIG flow wrap machines

SIG flow wrap machines such as the HBM, HSM, HCM, HCS etc. are high-performance flow wrappers known for their robust design and consistent pack quality at higher speeds. Its strong mechanical foundation makes it the ideal candidate for retrofit, allowing us to upgrade controls, precision and usability to current standards. Both mechanical and electrical retrofit solutions are possible, resulting in a modernised flow wrapping system that integrates seamlessly into your line.

Demaurex Robotic Solutions

We retrofit existing robotic solutions from Demarex such as Delfi, Presto and Paloma to unlock higher flexibility, speed and reliability. By upgrading controls, safety systems and motion performance, we bring older installations up to current standards. The result is a more adaptive automation setup without replacing your existing robotic infrastructure.

Specialized in both rack-and-pinion and delta configurations, we optimise performance based on your application needs.
