

Countstacker

High-Care flavor stacking system

The concept

The Countstacker Flavor is a high-care solution for stacking multiple products in the desired quantities and seamlessly feeding them between the flights of an FW3000 (or other) flow wrapper. This version excels in hygiene and cleanliness, making it highly suitable for flavor-coated products.

Hygienic operation

Designed with hygiene in mind, all product-contact parts can be easily removed for thorough cleaning and quick flavor changeovers. Removable parts can be placed on a trolley for cleaning in a dedicated area. The washdown infeed belt supports high-pressure cleaning, while the Countstacker on rails ensures easy access. This makes the machine a unique and ideal solution for flavored products.

Vision system

Equipped with an advanced vision system, the Countstacker continuously monitors product flow and automatically adjusts machine settings for optimal performance. Integrated blockage detection ensures reliability, while external light compensation maintains consistent operation under varying lighting conditions.

Flexible formats and configurations

The machine offers high flexibility in pack formats and configurations. The standard version features up to 15 channels, with smaller (lower-capacity) versions available with 10 channels. It can stack multiple products on top of each other up to a maximum stack height of 55 mm, and also allows stacks to be placed in sequence (up to three stacks). Format changes, such as 2x3 or 3x2 configurations, can be carried out quickly and easily.
