

Free Trade Demo of My Most Successful Trading Technique With My 22-Year-Old Son

If he pulls it off, he'll double his money... without touching stocks, bonds, or any conventional investments.

*

Grant Tries to Double His Money

Webinar Script

JEFF

<to wide, unless otherwise indicated>

(caption: Jeff Clark, retired \$200 million money manager)

JEFF: Hi, I'm Jeff Clark.

I'm here with my 22-year-old son, Grant... who's extremely nervous right now... because I'm about to do something I might never do again.

You see, throughout our industry, I'm known as a trader who spent more than two decades generating millions of dollars for high-net-worth investors. Along the way, I managed accounts worth up to \$20 million apiece.

But here's the thing...

When I tell people how easy it is to apply my trading technique in their own brokerage accounts... to achieve the same kind of 100%+ gains I showed my former clients...they often don't believe me.

Many folks think only a "professional" can make extraordinary money in the trading world... And that's simply not true.

Especially in the volatile market we're seeing right now, where my technique absolutely thrives.

That's why, because my son Grant <gestures to Grant> is about to graduate from college this year and set out into the real world, I want to do something today that could affect not only his own finances...

But could change the way you think about trading... and help you make a lot more money in your portfolio.

In my experience, \$1,000s a week... no matter where stocks go this year, and no matter what happens with Russia, inflation or the economy.

In short, I'm going to conduct a free trade demonstration of the trading technique that was so successful... It allowed me to quit my career as a \$200 million money manager at age 42... without having to worry about money ever again.

And today, I'm going to show you how it works... with my own FLESH AND BLOOD.

Along the way — I'll even give you a FREE recommendation so you can try this technique yourself.

You see, about once a year, I hold an event like this... where I discuss how you could double your money 10 times in a single year with my technique... without touching stocks, bonds, or any conventional investments.

And it's no joke. Last year alone, you could have doubled your money 16 different times following my recommendations.

And over the years, my subscribers have seen the chance to double their money 148 times.

148! Can you imagine?

But frankly... talking about our success is always a little frustrating.

Don't get me wrong...

I enjoy showing other people the technique I've developed — like the 225% gain you could have made in 36 days recently on a play I found in the silver sector.

But the truth is, I'm a pretty quiet guy...

So I hate having to “convince” people just how easy it is to apply my technique for a chance at incredible gains, no matter what your experience.

In fact... for 6 years, I refused to even appear in a video like this.

That's why, today, I want to prove it... with real money.

The simple fact is, for 20 years, I handled more than \$200 million in Silicon Valley for some of the wealthiest CEOs in California... by doing something a lot of people are terrified of.

TRADING OPTIONS.

But I did it with a technique that's been so accurate, it's drawn quite a bit of attention... from some surprising people.

For example, nine different banks on and off Wall Street have asked me to explain how it works... along with a Vice President at Chevron and a \$125 million pension plan (which I ended up managing.)

It's a way of using options to potentially double, triple, or in some cases, even make 5 to 10 times your money, whether the stock market is booming, crashing, or doing nothing at all.

Fortunately, I've managed to convince quite a few people to try it... like John M., who said: "You now have my attention. In less than one week, I am up over \$3,600."

But...

I'm really not comfortable with all the hype.

So today... instead of me sitting here trying to persuade you just how much money you could make trading options... I want to demonstrate my technique... here and now... with my own son.

Meet Grant.

He's 22 years old... in his senior year at Loyola Marymount University in Los Angeles.

Until recently, Grant had no investing experience whatsoever.

He'd never bought a stock, bond, or an option. In fact, he had no idea what an option even was.

When he's not doing homework, he spends most of his free time playing sports. Baseball, basketball, flag football. Heck, just about everything.

So as you can imagine... Grant is super competitive.

Especially with his younger brother, Carson.

And that's where this story gets really interesting...

You see, back in 2020, my other son — Carson — and I were stuck in the house together during lockdown.

And for the first time, Carson showed a special interest in what I do for a living...

One day he pulled me aside and said, “Dad, can you show me how to make money in the markets?”

You see, both of my sons know I’ve done well for myself.

We live in a beautiful house in Northern California...

With a game room... A wine cellar... A pool and jacuzzi... All the nice things my two sons want for themselves someday.

So I took Carson aside... and showed him exactly how my technique works.

I even recorded the whole thing live on camera and broadcast it to an audience of more than 50,000 people around the world.

Well... Carson’s a quick learner.

By using my technique, Carson made 114% in just two weeks on a Bank of America trade — without buying a single share.

In fact — after I walked him through it — Carson went on to nail a number of other big winners in the options market. With gains like 59% in six days on the iShares Brazil ETF, and 171% in seven days on the VanEck Vectors Gold Miners Fund.

JEFF (with Grant visible beside him): So... what’s the result of all this?

My other son — Grant — has become INCREDIBLY JEALOUS.

GRANT: Well hey... look... If my younger brother is making all that money trading options, I want a piece of that too!

If HE can double his money... so can I!

So I’m determined to do it... right here, right now. Let’s go.

JEFF: I’ll tell ya...

As a father of two sons... If you do something nice for one son, you’ve got to do something nice for the other.

So... after teaching my other son Carson how to double his money...

Today, it’s Grant’s turn.

And we couldn't have picked a better time to do this.

You see, I've been extremely excited about the market lately...

Back in 2020, the pandemic caused the worst stock market crash since 2008. And while that was bad news for most people...

I was overjoyed.

You see, I warned of a bear market 10 months before the 2008 crisis... which turned out to be one of the most successful years of my nearly 40-year career.

You could have doubled your money 10 different times in 2008 by using my options technique.

So when 2020 came around, I was ready. I'd already warned about a market crash — twice — before the coronavirus wiped out stocks. And sure enough... you could have doubled your money 9 different times — in 2020 alone — by applying my technique.

Today, I'm predicting the volatility will continue.

Whatever happens next with the market... I expect we'll continue to see huge swings over the coming weeks and months... which is the perfect environment for the technique I'm sharing today.

It's how I once made 10 times my money just before Black Monday 1987...

And how you could have made 14 times your money in 2 months by using my technique during the dot-com meltdown in 2000.

And that's why, today — here and now — I've agreed to walk my son Grant through my full technique...

I figure, I taught him how to read... how to throw a baseball... And now, as he gets ready to graduate from college this spring... it's time for me to teach him the most valuable skill I know.

In short: He'll try to DOUBLE his money... in 14 days or LESS.

And I'm going to document the entire process along the way for you, free of charge... so you can see how this works for yourself... And why I believe it's the only options technique that could make anyone — even total beginners — \$1,000s a week.

<to Grant>

Grant, you ready to get started?

GRANT: Yeah, I'm ready, dad. Let's do this.

*

JEFF and GRANT
(seated at table with open laptop)

JEFF
<to Grant, unless otherwise indicated>

JEFF: OK. Well, Grant, here we are... in front of a very large audience. You've got your laptop open and your brokerage account open...

And here's what we're going to do.

We're going to take a nice chunk of the money you've been making on the side in college and try to double it.

GRANT: Sounds good to me.

JEFF: Now, Grant, before we get started... I just want to say one thing.

You spent 18 years living under my roof, preparing to be an adult. And now I'm paying your college tuition.

So, what I'll show you today is your graduation present.

Use it wisely...

GRANT: Hold on a sec, dad... This is my graduation present? I could really use a new car. Those 2022 Jeep Wrangler's sure look cool...

JEFF: Grant, trust me...

Learn what makes this technique possible... and you could buy your own Jeep Wrangler... In fact, I don't think you'll ever have to worry about money ever again.

GRANT: Wow, Dad... that's a pretty bold claim.

JEFF: Just watch what I show you today very carefully... take notes... and I think you'll be very pleased with the results.

Now, go ahead and log into your brokerage account.

<B-ROLL: Logging into brokerage account>

And before we get underway, I just want to lay down a few ground rules for you and everyone watching.

First, this is NOT a simulation. This is REAL money. YOUR money, Grant.

That means if you lose money on this trade, it's your responsibility. You won't be reimbursed.

Do you understand that?

GRANT: I do.

JEFF: Good.

<to wide>

Second, I want to make very clear...

What you're about to see is purely educational. Do not consider this an actionable recommendation.

At the end of today's presentation, I'll give you a FREE recommendation that you can go off and use on your own.

But for the moment, this trade is strictly for my son, Grant.

And finally... today we'll be BUYING OPTIONS, which most people have no clue how to properly do.

But over the next few minutes, I'm going to show you a secret to placing a single trade that could double your money, ideally in 14 days or less, with less risk than buying stocks.

All by doing the same thing I did back when I managed \$200 million.

<B-ROLL: Photos of Jeff at his old firm>

You see – at my old firm, I handled accounts worth up to \$20 million apiece, for entrepreneurs, startup founders, pro athletes, you name it. One client made about \$180,000 a year, for almost a decade, by doing what I'll share today.

[Testimonial Graphic — “\$40,000 in profits this week...” —Brad K.]

More recently, I shared this with a fellow named Brad K. who told me he's made \$40,000 in a week.

<to Grant>

So Grant, you're in good company.

GRANT

Sounds good. Well, let's get this show on the road...

JEFF

<B-ROLL: Screenshots // Interactive Trade Demo Screen Record>

OK. Now first off, Grant, go ahead and scroll up to the tab that says "Trade." Click that... Good.

And now, you've got this little window here that lets you enter all the information.

GRANT

Dad, hold up a sec.

Is this day trading?

JEFF

No. This DOES NOT involve buying and selling stocks at all. And I rarely rush into things.

<to wide>

By the way, there's a big misconception about people like me who trade for a living. Day traders often grab at every opportunity to profit. And that's not what I do at all.

GRANT

What do you mean?

JEFF

Well, Grant, I'm an options trader.

But keep in mind...

Whatever you may think about options – whether you think options are risky, or whether you don't even know what an option is – what you're about to watch is something 99% of the public has never seen before. And that's why I've agreed to jump right into a trade today and demonstrate it.

<to Grant>

In fact, Grant, before you were even born, I was hired as the Dean of a business school, even though I don't even have an MBA... all based on how successful this thing has been.

GRANT

Got it. So Dad, you're an options trader... but you don't do anything risky, right?

You seem really cautious, from what I've seen. I mean, you wake up at 4 a.m. and study hundreds of charts.

JEFF

That's right. I don't ever execute a trade unless my technique shows an opportunity to make a LOT of money, very quickly. If I don't see it, I stay away.

Now, Grant, I want you to write this down: Patience is key.

But it's the way I FIND these trades that I think you'll find surprising – and even a little strange.

GRANT

Well, let's hope you find one today. Fingers crossed!

JEFF

You're not getting cold feet, are you?

GRANT

Well, until recently, I'd never bought a stock before... Never bought a bond... option... I'm an absolute beginner when it comes to trading.

So, yeah, I'm a little freaked right now.

What if I mess up and lose all my money?

JEFF

Well, I was actually YOUNGER than you are, Grant, when I tried this options technique for the first time.

I just turned 18, opened my first brokerage account, and, literally, the very first time I tried it, I tripled my money in a few hours.

GRANT

Ah, come on... I bet you just got lucky...

JEFF

Well, I can tell you the second time I tried using options, I tripled my money in just a few days.

And over the next 6 weeks, I tried this technique 17 times, and nailed it 17 times in a row, turning the \$5,000 I'd started out with into about \$50,000.

Was there a learning curve? Sure. But man, I gave out huge Christmas presents that year...

GRANT

Well, when I graduate from college this spring, my plan is to travel the world.

I want to go to Europe... Latin America... maybe even parts of Asia. I'm going to take a WHOLE YEAR off and just travel from one country to another. So... I could definitely use some cash right now.

JEFF

Great. Well, let's see if we can build up your savings account by applying this technique today. And if it works... you can do this a whole bunch of times before you hit the road.

<B-ROLL: Brokerage account // Screen Recording>

OK. So Grant, here we are in your brokerage account...

You've got the trading window open... and we're going to look for a trade setup and try to double your money.

We might get lucky and make you 5 to 10 times your money. But let's keep it modest today and go for a double.

GRANT

Wait a minute. You've made ten times your money doing this? How long did that take?

JEFF

One time I did it with one of your favorite companies. Netflix.

<to wide>

Back when Grant was still living at home with me, we had a lot of family movie nights. Although, sometimes it was hard for us to agree on which movie to watch on Netflix.

GRANT

Well... at least we had sports in common.

JEFF

That's true — we both like baseball.

Anyway, way back in 2004, I found an options trade on Netflix that made us a 1,007% gain, which is eleven times your money — in just 42 days.

<B-ROLL: NFLX chart — 1,007% in 42 days>

That one took us 42 days, but it turned every \$5,000 investment into \$65,560.

That'd cover a decade of Netflix subscription fees — and you'd still have more than \$64,000 left over.

Imagine doing this on a regular basis, Grant, and you can see why I don't have to work an office job.

GRANT

OK, but hold on. What's an option trade exactly?

JEFF

I'll tell you what... Let's keep going with your trade and I'll walk you through it.

<B-ROLL: Grant trade animation>

Back in your brokerage account, I want you to click on "Transaction Type"... and select "Options."

Good.

GRANT

Dad — quick question. How many people do you know who've actually made good money trading options?

JEFF

Well, I've shared this with thousands of people and gotten thousands of notes. Including one from a gentleman named Gernot R.

Gernot emailed me to say his portfolio fell to about \$170,000 during 2008... But. With my help, he was able to get it up to \$480,000 following my technique... That nearly triples his savings.

And he didn't have the luxury of sitting right next to me.

GRANT

Who else?

JEFF

And Brad K., who I told you earlier made \$40,000 in one week... Well, he emailed me again just a two weeks later saying he made another \$65,000...

Altogether, I think Brad's made around \$155,000 using my technique.

<TEXT ON SCREEN: The investment results described in these testimonials are not typical; investing in securities carries a high degree of risk; you may lose some or all of the investment.>

But enough of that.

Let me show you an example of how this all works...

Take the company Guess, OK? The clothing maker. Used to be popular with kids your age, actually.

GRANT

Yeah, I know some kids who wear Guess.

JEFF

OK. So, Guess is a publicly traded company.

B-ROLL: GES chart

And back in May 2017, I had reason to believe the stock would go up. I knew that because of the technique I'm going to show you today.

Now, let me ask you, Grant. If you thought Guess was going up, what would you do?

GRANT

Buy the stock!

JEFF

Why?

GRANT

How else am I supposed to make money?

JEFF

Let's take a look at what happened...

<B-ROLL: GES chart>

Turns out I was right. Guess went up.

If you bought the stock, you'd have doubled your money about one year later. Not bad, right?

GRANT

Doubling your money in one year? Heck yeah!

JEFF

What if I told you that instead of waiting for an entire YEAR, you could have doubled your money in just ONE DAY instead?

GRANT

Is that possible?

<B-ROLL: GES chart>

JEFF

It's not only possible, it's exactly what happened back on May 24th, 2017 when I found and recommended an OPTIONS PLAY on Guess.

GRANT

OK, so let me get this straight...

You knew Guess stock would go up.

But instead of buying the stock, you recommended buying an OPTION on the company instead.

JEFF

Yeah. And saw a 100% gain in 24 hours.

Grant, this is the first lesson I want you to learn about options. I want you to write this down.

With options, you can make money FASTER than just buying plain old stocks.

GRANT

Awesome. Well, now I know how you paid for all those trips to Europe each summer...

JEFF

Well, the SPEED of options is what "sped up" my own retirement.

When you can double your money that quickly, you have an enormous advantage.

GRANT

OK. But Dad... before we go any further here, don't kid around with me.

Is doubling your money in one day like a regular thing for you, or is it pretty rare?

JEFF

Well, in March, you could have made 173% in just two days on a trade I recommended on PayPal.

[PYPL 173%]

In February, you could have more than doubled your money in 26 days using an options play I recommended on DBA.

[DBA 142%]

Back in December — you could have made 133% in 19 days on an options play I recommended on SOYB.

[SOYB 133%]

And in November, on another one of my recommendations, you could have made 118% in just 9 days on GDX.

[GDX 118%]

GRANT

Wow.

JEFF

Now, sometimes it can take a little longer, sure.

<B-ROLL: Waterfall Winners>

PYPL — 173% in 2 days
WPM — 225% in 36 days
SWBI — 117% in 31 days
SDQQA — 1,285% in 2 days
AEM — 153% in 31 days
GOLD — 109% in 44 days
SWBI — 225% in 27 days
XLE — 159% in 27 days
GG — 154% in 34 days
TGT — 139% in 4 days
AMZN — 300% in 14 days
CFC — 138% in 1 day
NWL — 178% in 33 days
BBBY — 117% in 14 days
MSO — 343% in 11 days
HKQHB — 490% in 25 days

For example, here's a sample of the trading recommendations I've made over the years that could have doubled your money or more.

In some cases, we saw it in 48 hours. In other cases, it took a month.

But the important thing is that the option gain was ALWAYS FASTER than the stock.

GRANT

Well, that's good to hear. I could definitely use an extra \$5,000 to help pay for my travels this summer.

JEFF

Just do as I recommend and keep an open mind.

OK. Let's keep going.

<B-ROLL: Trade View Live Interactive>

Back in your brokerage account, I want you to go to Symbol. That's where you put in the stock ticker.

GRANT

I thought we're not buying stocks today.

JEFF

That's right. We're not buying stocks. We're going to buy an option.

But in order to FIND the right option, we have to choose a company.

And the symbol tab here — the stock ticker — is just how we identify which company we're trading.

Make sense?

GRANT

Got it. So each company has its own option.

JEFF

Usually LOTS of options.

<B-ROLL: AAPL, Amazon, Tesla options>

For example, for big companies like Apple, Amazon, or Tesla, there's just ONE stock attached to it... but literally hundreds of options. And that's why most people have no

idea how to make money with options. They get overwhelmed by the choices and choose the wrong one.

GRANT

So your technique is a way of sorting through the hundreds of options... and finding the one with the highest potential gain. Is that right?

JEFF

Exactly, good. The difference between the *right* option and the *wrong* option is enormous.

And you must take dozens of factors into consideration, including all the problems facing the U.S. economy. Today, for example, I've got my eye on what's been going on in Ukraine. And I've been doing this kind of analysis for decades.

<Gateway Option — 1,391%>

Like when I found the right option for a company called Gateway back in 2000, I saw a 1,391% gain in about two months.

That's 14 times your money.

GRANT

Gateway... They made computers, right?

JEFF

Back before you were born, yeah. It was a big name in the dot-com era.

Or think about those TV commercials for Strayer Education, the online university...

GRANT

Yeah, I've seen those commercials.

<Strayer Education — 1,285%>

JEFF

Well, I once found the right option for that company. There were hundreds to choose from, but my technique narrowed it down to exactly ONE, based on all the action in the stock market.

I pulled the trigger and saw a 1,285% gain in just 48 hours.

GRANT

Holy cow. So that's like, what, 13 times your money in two days?

JEFF

Sure is. So Grant – that's why it's always so important to never rush into a trade... and to always have the proper technique. In this case, to choose the right option.

GRANT

Got it. Let's keep going. Which company should we target right now?

<B-ROLL: Interactive Trade CGC>

JEFF

OK, back to your brokerage account. I want you to type in C-G-C. That's the symbol for Canopy Growth Corporation.

GRANT

Canopy Growth Corporation? Can't we trade something a little more exciting, Dad? How about a nice, juicy trade on Tesla?

JEFF

There's a far better opportunity in the cannabis sector, Grant. Take a look...

JEFF

<B-ROLL: S&P 500 vs [AdvisorShares Pure US Cannabis ETF](#) chart animated>

After the coronavirus crash back in March 2020, most sectors have seen a MASSIVE rebound. But not all of them...

Take the S&P, for example, which tracks 500 large-cap companies in the U.S.

The S&P plummeted 33% in March 2020. Then it recovered big time, soaring 114% over the next two years.

And for a while, the cannabis sector followed right along... But then, at the beginning of 2021 it started dropping...hard.

Which has opened a fantastic trading opportunity.

GRANT

OK, so you think Canopy Growth is going to make a big move today?

JEFF

I do.

Cannabis stocks were crushed in 2021. The AdvisorShares Pure U.S. Cannabis ETF peaked last February at about \$55 per share. It's trading for less than \$25 today.

That's a brutal decline.

But for us, it's a huge opportunity — because by using my technique (which we'll get into more detail on in a moment), I can see that it's now poised for a big move UP.

I expect it'll be a top performer in 2022.

It's one of the best-looking opportunities. But, no one sees it yet.

GRANT

I see. So you think the cannabis sector is about to play “catch-up” with the rest of the stock market...?

That makes sense.

Well, in that case, why don't we just buy a whole bunch of cannabis stocks? Tilray... Curaleaf... Cronos...

JEFF

Not so fast, son.

You see, most people who agree with me would do exactly that. Just buy the stocks and hold for the long run.

And that's why most people need decades to retire.

So we're going to speed things up.

GRANT

But Dad, hold on a sec...

Some people might be fine buying and holding stocks. Isn't that how Warren Buffett made his billions?

JEFF

Sure. But keep in mind that speed is just the first benefit of using options.

There's an entire second reason why buying options is so much better than buying stocks. Let me give you an example...

You've heard of Sprouts Farmers Market, right?

GRANT

The grocery store chain? Yeah, I've heard of it.

JEFF

Well, each week I apply my technique to dozens of different companies, looking for the perfect trade.

In this case, last year, on January 13th, I applied my technique to Sprouts Farmers Market... and determined that the stock would soon go up.

In fact, I publicly announced Sprouts was "headed for a big move" in the market.

GRANT

But you didn't recommend buying the stock...

JEFF

No. I could have... but I knew the right OPTIONS play would be a whole lot better.

<B-ROLL: SFM stock vs option>

Here's why. Watch what happened...

I was right.

Sprouts went up... but if all you'd done was buy the stock, you'd have made just 16% by January 26th, about two weeks later.

Not very impressive, right?

GRANT

16%? In two weeks? I don't know, dad. That seems pretty good to me.

JEFF

Sure, Grant, it's pretty good. But you're not going to get rich making 16%.

With options, it was a completely different story...

<B-ROLL: SFM chart Stock vs Option chart>

Instead of buying the stock and making just 16%, you could have made 167% instead. Which more than DOUBLES your money — in about the same time span.

GRANT

Got it. So options give you the chance to basically make a LOT MORE MONEY if you find the right one.

JEFF

Exactly. For every 5% move in a stock, an options play could make you 10 to 20 times more money. And as you've already seen, you can make that gain a whole lot FASTER.

With Sprouts Farmers Market, you would have made literally 10 times more money than the stock.

There's a word for that — so write this down. It's called "leverage."

GRANT

Leverage. As in, leveraging the power of your investment to make as much money as possible?

JEFF

Very good, Grant.

GRANT

Gotcha. Well, heck, now I can why see you trade options. More money, faster.

JEFF

More money, faster.

Now, a lot of people think it's rare to see gains like that buying options...

But it's almost all I've done for 40 years now... with results so good I've never really bothered much with buying stocks, real estate, bonds, precious metals... or just about any other strategy.

Today, for example, stocks are down. If you only hold stocks, you're probably feeling stuck...

And when big market shakeups happen — or worse, major crashes like the dot-com bust, or 2008 — folks who only own stocks get hosed...

GRANT

Yeah, I remember hearing about the Crash of 2008.

I was just a kid back then, but... it sounded pretty nasty.

JEFF

Well, Grant, as it turns out, you could have doubled your money 10 different times in 2008 with my technique. Before, during, and after the crash.

That's why when people tell me options are "risky," I usually laugh.

My reaction is: Stocks are risky!

Did you know options were first invented to REDUCE THE RISK OF BUYING STOCKS altogether?

Think about where we are today.

The market is getting hammered.

The S&P 500 has had its worst start in 90 years... And the Nasdaq its worst start since 2008.

<WPM | Delta Report | 130% in 22 days>

But while most people are panicking, I recently booked a 130% gain in just 22 days.

Two and a half times your money in less than a month!

GRANT

Whoa. And meanwhile, everyone else is losing money in stocks... And it seems like people are really scared of inflation and the chance of a big recession, right?

JEFF

That's right. And yet – most people have no clue that options trading is designed for this kind of environment?

Why is that? Because most people are simply too lazy and, often, too stubborn to sit down and take the time to learn how options really work. So they ignore this type of trading entirely... despite its enormous power.

GRANT

Gotcha. Well, Dad, thanks for the 101, but let's keep going.

JEFF

OK. Now, I want you to scroll over to "Strategy," and select "Calls & Puts."

GRANT

Calls & Puts. What the heck does that mean?

JEFF

It's easy.

You see, when you trade options, there are 2 types to choose from.

For example, remember last year when you were playing in that flag football league?

GRANT

Sure, we were playing for bragging rights on campus.

JEFF

Well, I didn't tell you this at the time...

But back on April 5th, while you were preparing for the season, I went into my office and looked at the gold sector. I applied my technique... and found something interesting. Take a look...

<B-ROLL: AEM chart — down 18%>

GRANT

What is this exactly?

JEFF

This is a chart of Agnico Eagle Mines, AEM, a gold company with operations in Canada, Finland and Mexico. And at the time, it was doing terribly... The stock dropped from \$73 to \$59 in two months...

To most people, it looked like it was headed for the toilet.

So let me ask you, Grant... In this case, what would you do?

GRANT

Well, I'd probably assume gold is a dead investment. So I'd make a big bet on gold continuing to plummet.

JEFF

Well, Grant, a lot of people did exactly that last spring.

They tried to make money on gold going down.

But in this case, I applied my technique... and determined the general public was WRONG. AEM was actually on the verge of going UP.

So I recommended buying a call option.

GRANT

What's a call option?

JEFF

A call option is an option that makes money when a stock goes up. It's that simple.

So while everyone else thought the stock would go down, I recommended doing the EXACT OPPOSITE.

GRANT

And how'd it work out?

JEFF

Even better than I hoped.

<B-ROLL: AEM chart — 153% in 31 days>

You could have made a 153% gain in a single month, which more than DOUBLES your money.

GRANT

So everybody else thought gold would keep falling... they bought the wrong option... and they lost money.

JEFF

Exactly. I did the opposite.

And I was right. AEM immediately started going up, which would have more than doubled your money in one month if you'd gotten into my recommendation.

And that's what I'm recommending for you today.

I want you to buy what's known as a "call" option...

<B-ROLL: Screenshot>

So scroll down there... and select "Call." Good.

GRANT

But hold on, Dad. Why are we making this particular trade right now?

JEFF

<B-ROLL: CGC chart>

Well, remember, we're targeting Canopy Growth Corp., right? So let's take a closer look at the stock...

Here's where the market crashed back in March, 2020...

And as you know, the crash was extremely short-lived. The S&P went on to have its greatest 50-day rally in history.

GRANT

Yeah... it seems like a lot of people made money in the stock market over the past couple of years.

JEFF

Sure, and there were a lot of factors driving that.

The Fed took unprecedented action to stabilize the market.

They pumped more than \$10 trillion into the system, which now has a lot of people worried about massive inflation... which is causing a flight from cash into assets like high-quality blue chips, gold, and bitcoin.

<B-ROLL: [AdvisorShares Pure US Cannabis ETF chart](#)>

But strangely, the cannabis sector has barely benefited from all of this. We had a 2020 rally, as you can see here...

But then it lost steam and fell in 2021.

A company like Canopy Growth hasn't seen nearly the massive jump that Apple or Microsoft have, by comparison.

So, a lot of people think cannabis is a dead investment that will keep going down or just continue drifting sideways.

And for the next couple of weeks, I predict those people are going to be very, very wrong, Grant.

GRANT

Wait a sec, Dad. I think we should reconsider this.

Look at how poorly Canopy Growth has done this year. Do you REALLY think everyone is wrong?

JEFF

Well, that's where my technique gets interesting...

You see, what I've discovered over 40 years now is that doing the OPPOSITE of everybody else, in a very, very specific way, is the only truly reliable way to make huge gains in the options world.

Even if it feels painful to do so.

For example, remember last Thanksgiving a few years back?

GRANT

Thanksgiving? Sure. Turkey... Sweet potatoes... Football...

JEFF

Well, I didn't tell you this at the time...

But while you and your mother were preparing for the holiday, I was in my office. And I applied my technique to the S&P 500.

GRANT

The stock market index.

JEFF

<B-ROLL: SPY chart>

For months, the S&P 500 had been going straight up, like a rocket...

So let me ask you, Grant... In this case, what would you do?

GRANT

Well, I'd probably assume the S&P would continue going up. So I'd get a piece of that.

JEFF

Well, Grant, a lot of people did exactly that just before Thanksgiving last year.

They tried to make money on the S&P going UP.

But in this case, I applied my technique... and determined that the general public was wrong. The S&P 500 was actually on the verge of going DOWN.

So while everyone else was betting on the upside, I recommended doing the EXACT OPPOSITE. In fact, I publicly wrote: "This condition often leads to a sudden, sharp decline that appears as if from out of nowhere..."

I even remarked on how "smug" the talking heads appeared on all three major financial networks.

And I wrote, "That only happens right around a short-term peak in the market."

So I recommended buying a put option.

GRANT

What's a put option?

JEFF

A put option is an option that makes money when a stock goes down. It's that simple.

In this case, you could have made a 120% gain in just 8 days by following my recommendation.

<TEXT ON SCREEN: When trading Put Options, you may be on the hook for purchasing the underlying stock. But even in this situation, the stocks we're targeting are strong stocks to own.">

GRANT

OK Dad, so let me get this straight...

With your trading technique, you choose the right option by looking at what everyone else is doing... and then, you do the exact opposite.

JEFF

There's a SECRET to doing this, which I'll explain... but that's the gist of it.

I love to take advantage of the market when lots of people are wrong at the same time, which happens a lot.

Remember: When you buy stocks, you're trying to get into the right stock BEFORE everyone else. But with options, as I've shown you here, it's different.

GRANT

Gotcha. So going back to the trade I'm making...

What's going on with Canopy Growth that makes you think I could double my money so quickly?

JEFF

Well, everyone thinks Canopy Growth will continue to be a loser. But I've been up since 4 a.m. today, applying my technique.

And I think it's about to go up.

[CHART: Canopy Growth Corp]

In particular, I've been looking very carefully at Canopy Growth's stock chart...

Take a look...

It has what's known as an "ascending triangle" pattern.

GRANT

"Ascending triangle" pattern...? What the heck is that?

JEFF

Don't worry just now what it means.

It's just one example of how I look for a very unusual type of formation when I apply my technique.

In fact, in addition to the ascending triangle, I'm also looking at something called the MACD in this chart. And the "moving average line." All these, together, point to a classic bullish setup.

GRANT

Whoa, Dad. You've totally lost me...

JEFF

Well Grant, the bottom line is this.

If you know what to look for, each company – and its chart – contain a lot of information that can help you know EXACTLY where the stock is going next.

And that's how you choose the right option.

GRANT

Dad, I don't mean to doubt you, but...

Do you really think I could double my money in 14 days or less by betting against tens of thousands of people?

JEFF

Grant, sounds to me like you're chickening out.

Your brother didn't chicken out when he made his trade...!

GRANT

No way, dad!

And believe me — if Carson can do it, I can, too.

But I mean... what's wrong with just skipping this whole trade and buying a stock?

JEFF

Well, look, Grant.

If you want to chicken out and just buy a stock, I won't blame you. We can turn off the camera and call it a day.

But I want you to remember that I walked away from my career as a \$200 million money manager at 42 — and accomplished everything you've said you want in life... by mostly AVOIDING stocks entirely.

And the reality is, the way this year has started out, lots of smart folks think we're now in a bear market.

That means buying and holding stocks just isn't going to work anymore. Instead, you'll make a lot more money playing the short-term moves instead.

Take Dr. Pepper, for example...

GRANT

Sure. I like Dr. Pepper.

JEFF

Well, some years back, the company announced the release of a new soda formula.

If you wanted to, you could have just bought the stock, which is what most people do when they're excited about a company.

But as you've seen, Grant, I'm not like most people.

GRANT

Certainly not, Dad. Especially your taste in music.

JEFF

Well, in any case... In July of that year, I applied my technique, and found an options play for Dr. Pepper.

The stock rose 7%.

Which... OK, not bad. But again, life is too short to settle for a 7% gain.

GRANT

So basically, you didn't chicken out...

JEFF

I didn't chicken out because I have a technique I've been using for 40 years now that allows me to evaluate the hundreds of different options surrounding any given company, at any moment... and "see," BEFORE I get in, what the most likely outcome will be.

Sometimes down to the exact percentage.

<B-ROLL: PMTI chart>

For example, way back in July 2008, I found an options play for the medical company called Palomar.

And I wrote: "We're looking at a truly explosive situation here. We could make 300% gains in a month."

Now, there's a pretty bold statement. Especially considering we were in the middle of a recession.

GRANT

Yeah, that's pretty gutsy, Dad.

JEFF

But sure enough... we saw a 490% gain in just 25 days. Even better than I anticipated.

B-ROLL: EWW chart

I did the same thing back on January 20th, 2010, when I found an options play on EWW, which follows a basket of Mexican companies.

In that case, I publicly announced: “We’ll make up to 300%... should be a quick trade.”

In that case, I was off slightly.

You could have made a 100% gain in 5 days... which is still double your money in less than a week.

GRANT

Wow, that’s pretty cool.

So you have, like, a crystal ball...

JEFF

Well, I can’t predict the future.

But what I CAN do is look at hundreds of options surrounding a stock... and tell you which will likely be worthless, and which have real potential to double your money, by looking for hidden information in the chart.

The simple fact is, while most people gamble with options, I use options with a precision you simply won’t hear about from any broker.

And I say that as someone who once hired 45 brokers to work for me, back at my old firm!

GRANT

So going back to Dr. Pepper, you pulled the trigger, and basically knew you would make money.

B-ROLL: Dr. Pepper chart

JEFF

<TEXT ON SCREEN/Footer Text: All investments carry risk, nothing’s ever guaranteed in the market, and past performance doesn’t imply the future.>

Well, Grant, there are no guarantees in life... But I had a high degree of certainty. And sure enough, by using an options play, I saw a 106% gain in just 2 DAYS.

15 times more money than the stock.

GRANT

That's pretty sweet, Dad...

JEFF

So, Grant, my point is... If you chicken out today... you're limiting yourself to a lifetime of making single- or double-digit gains, and that's assuming you don't get wiped out by a crash.

Meanwhile — guys like me who know the REAL SECRET to trading options will consistently make 10 to 20 times more money than you. And when crashes come along, I sleep like a baby.

In fact, I'm sleeping better now, and am more optimistic — even with all the shake-ups this year — than I have been in a long time.

GRANT

So I guess you've been waiting a long time for a market like this.

JEFF

Don't get me wrong. When markets tank, a lot of people can get wiped out. One big crash can erase a decade's worth of gains. So you've always got to be on guard, especially in the kind of rollercoaster market we're seeing today.

Am I worried? No.

But if you study the markets... you'll see that sometimes a bear market can last a loooong time... and take years to fully recover. And that's one more reason I like to avoid holding stocks.

GRANT

Ooof... I hope that doesn't happen in 2022. Heck, I'm about to graduate from college — the last thing I want is a recession.

JEFF

Well, recession or no recession... inflation or not... here's why I'm not worried about making money with this technique.

The fact is, if we see a bear market, it means just one thing.

And that is — you'll simply have MORE OPPORTUNITIES to profit.

Even during the crash itself!

GRANT

C'mon, dad... How do you figure?

JEFF

Well, let's take a look at where we are now.

The S&P is down... The DOW and the Nasdaq are all down...

If you're a buy-and-hold investor... there's nothing for you to do in this situation but sit on the sidelines and wait. And maybe you sell some your shares during the "relief rallies."

GRANT

But with options, it's a different story, right?

JEFF

You bet.

Take the coronavirus, for example. Most people didn't see the warning signs.

But on February 21st, 2020 — six days earlier — I publicly predicted that stocks would soon see a big drop.

At the time, I wrote: "We could be in for a pretty good selloff over the next several sessions."

And I predicted gold would fall too, over the short term.

So I applied my technique... and got into an options play on the VanEck Vectors Gold Miners Fund.

GRANT

You sure like to trade gold...

JEFF

I do. It's probably my favorite sector.

B-ROLL: GDX chart

Sure enough — the stock plummeted 36%, and while shareholders lost money, you could have more than tripled your money in just 8 days.

GRANT

What!? That's awesome.

JEFF

So... That's another lesson of using options...

You could make money in almost any situation, good or bad. Whether stocks go UP or DOWN.

In other words, there's a way to profit on both sides of the share price... no matter what happens to the stock, the markets or the economy.

GRANT

OK, you convinced me... Options it is.

But if I lose any money on this trade today, Dad, you're never going to hear the end of it.

JEFF

I know, son. I know.

GRANT

All right. Let's keep going.

JEFF

Good.

<B-ROLL: Trade view recording>

Scroll down to Action.

And click "Buy to open."

GRANT

“Buy to open...?” What does that mean?

JEFF

It just means the action you’re taking today is to open a trade... by buying something.

In this case, an option.

GRANT

OK, easy enough.

JEFF

Now, let me ask you something.

How much money do you want to put into this trade?

GRANT

I don’t know, five hundred bucks?

JEFF

You comfortable putting that much cash into a single trade?

GRANT

Why not? I’ve seen the notes you get.

One guy says he made \$3,600 in one week...

And another guy says he made like \$310,000 following your trading technique...

<TEXT ON SCREEN: The investment results described in these testimonials are not typical; investing in securities carries a high degree of risk; you may lose some or all of the investment.>

So, I figure, if I could double my money, let’s make it count.

JEFF

You’re the boss.

In that case, scroll down to Quantity.

And I want you to select “5.”

GRANT

Wait a minute, Dad. This is how many options I'm buying, right? Why five?

JEFF

Right now, a position in the Canopy Growth call option we're looking at trades for \$1.04.

So, if you want to invest \$500, that works out to about 5 options.

GRANT

Wait a minute... I don't follow that... Can you explain the math?

JEFF

Sure.

See, here's the really neat thing about options, Grant.

1 option gives you the same firepower as 100 shares.

So... think of it this way.

By buying 5 options right now, you're actually getting the same firepower as 500 shares!

GRANT

500 shares! Wow, that's great.

And I don't have to buy the shares, right? I mean, no matter what happens with this trade, I don't ever have to buy the stock, right?

JEFF

That's right. You're not buying any stock with this type of trade. Today or ever.

Like any other investment, all you ever risk is the money you put in.

It all goes back to that word you wrote down earlier. *Leverage*.

Just a single option gives you the same firepower as 100 shares, on the upside or the downside, without ever having to own the stock itself.

At \$1.04 an option, that means each option you buy costs \$104.

So by buying 5 options... you're investing \$520 into this trade. If you're getting cold feet, just let me know...

GRANT

Nope. I'm good! Let's do it. Let's pull the trigger.

JEFF

OK. You're almost done.

By the way, don't underestimate the power of leverage. It's the entire reason I've devoted my life to options.

For example — remember that trip we took to Sonoma Valley?

GRANT

Wine country. Sure. It's beautiful out there. The vineyard tours were amazing.

JEFF

Well, the reason we're able to take such nice trips as a family is, in part, because of how successful this technique has been.

GRANT

Well, maybe I'll get rich doing this and buy a little vineyard of my own.

JEFF

If you can master this technique, you can buy a lot more than a vineyard...

All right, let's wrap this up...

<B-ROLL: Screenshot>

Scroll down to Expiration... and choose March 18th.

GRANT

Whoa, whoa, whoa. Time out, Dad.

What's this?

JEFF

It's simple. We think Canopy Growth is going up, right?

Well, the question is: WHEN do we think that's going to happen by?

Tomorrow? A week from now? A month from now?

In this case, according to my technique, I think Canopy Growth is going to go up pretty soon. I think you'll see it happen by NO LATER THAN March 18th, about a month from now.

<to wide>

By the way, for everyone watching...

We're filming this video ahead of time. By the time you watch this, Grant's trade will already be finished. Good or bad, we're going to give you the full results TODAY... in literally the next few minutes.

And don't worry: You'll still get that FREE recommendation to place immediately after this event airs in April.

GRANT

OK, so this whole trade should be finished by March 18th.

JEFF

Yep. That's what this tab "Expiration" is for. It's just a way to ballpark how long the trade might need to play out.

GRANT

Do you always look for a specific time frame...?

JEFF

Well, it depends. For example, I once found an options play for a company called Smith & Wesson.

B-ROLL: SWBI chart

I thought the stock would go up... over at least the next two months or so.

GRANT

So what did you do?

JEFF

Well, the company caught my attention on April 27th of last year

So I chose an option with the expiration date of June 18th. About 2 months away.

GRANT

So you gave yourself 2 months to let the trade play out. How'd you end up doing?

JEFF

The stock ended up rising even faster than I anticipated. And that was perfectly fine. Instead of holding the trade all the way to June, I recommended selling early, and we closed out about a month later for a 117% gain.

GRANT

Gotcha. So you don't have to nail the exact day.

JEFF

Nope, not at all.

For example, remember the summer of 2018?

GRANT

How could I forget! That was the summer my baseball team toured the country playing in all sorts of tournaments.

JEFF

Well, on July 16th, I applied my technique... and found an options play for AdTran, an Internet service provider. I was confident the stock would go up, but I thought it might take the entire summer.

<B-ROLL: [ADTN chart](#)>

So in that case, I recommended an option with an expiration date in August.

GRANT

About a month away.

JEFF

Yeah, I figured it would take about a month. And boy oh boy, was I wrong.

<B-ROLL: ADTN chart>

Within literally seconds of pulling the trigger, the stock took off.

I saw a 127% gain just 2 DAYS LATER.

GRANT

So the fact that you were wrong about the date... and chose an option all the way through August... it didn't matter.

You could have still doubled your money...

JEFF

That's right. Because remember, you can sell the option at any time before it expires, like any other investment.

That's why I try to find the most explosive trades — like the ADTN trade which soared 127% in two days...

But it's good to have a little wiggle room, which is why I tend to recommend an expiration date a month or two out.

It's a smarter, less-risky way to trade.

<B-ROLL: Screenshot>

GRANT

Got it. In that case, I'm going with your recommendation, Dad, and I'm selecting March 18th.

OK, done.

JEFF

Perfect. And with that, you're almost finished, Grant.

Just one last thing before we place the trade...

Scroll over to “Strike.” See that?

GRANT

Strike... Yeah, I see it. Right here.

JEFF

Select \$7.50.

GRANT

OK, but hold on a sec here, Dad. What’s a Strike? What am I doing here exactly?

JEFF

Well, it’s simple, Grant.

We think Canopy Growth Corp. is going up, right? So the question is: By how MUCH do we think it’s going up?

<B-ROLL: CGC, with red line animation to Strike>

In this case, the stock is currently trading for about \$7.85.

And, according to my technique, the stock could soon rise to at least \$9 a share. And probably a lot higher.

So in this tab here – Strike – you’ll select \$7.50.

GRANT

So you’re just predicting this company will be trading somewhere ABOVE \$7.50 over the next month?

JEFF

Exactly. For example, I once predicted that Newell Brands — a consumer goods company — would rise to \$24 a share.

So I found an options play with a \$21 strike. And we saw a 179% gain in just 33 days.

GRANT

Huh. In this case, you're not predicting a very big move, are you? Just basically a small jump.

JEFF

Exactly. I'm not predicting Canopy Growth is going to skyrocket, necessarily.

I'm just looking for what I think is a highly probable movement in the share price

And then... by applying my technique... I'm looking for the RIGHT OPTION to help make the most money possible on that movement.

Remember, the right option can make you 5 to 10 times your money on just a rinky-dink 5% stock move.

So... in this case... if I'm right... this tiny move in Canopy Growth could double your money. Very quickly.

GRANT

Gotcha.

Well, I gotta say, Dad... that all makes sense and none of this has been too difficult. I mean, there's a lot of fancy vocabulary floating around here, but, overall, this is pretty straightforward.

JEFF

It's incredibly straightforward.

<to wide>

I tell everyone: You DO NOT need to be a genius to place an options trade.

GRANT

I'm surprised more people my age aren't doing this...

JEFF

Well, once you get the hang of it, I'm sure your friends might start to notice how you're never short on cash.

GRANT

Yeah, forget hostels and backpacking... I'd be able to stay in 5-star hotels when I travel this summer...

Okay, I'm done daydreaming. Let's go ahead and place this trade.

JEFF

Let's do it.

Scroll down to Submit. Hit that button, and you're good to go.

GRANT

OK, here goes nothing!

Boom! Done! The trade has been placed!

JEFF
(fist bump with Grant)

With that... congratulations, Grant. You've just placed an options trade!

GRANT

Now what?

JEFF

Now we wait... and see how the trade plays out.

But I don't think you should worry.

<B-ROLL: Testimonial graphics>

For example, I heard from Stephen G. recently told me he made 171% on an options play I recommended.

Another reader, Bruce, said he made a quick 100% profit...

And Jeremiah M. told me he got into a trade at \$1.36, it shot up to \$5.05 and he ended up making 271%...

<TEXT ON SCREEN: The investment results described in these testimonials are not typical; investing in securities carries a high degree of risk; you may lose some or all of the investment.>

GRANT

Got it. Well, let's hope for the best.

<to wide>

Stay tuned, and we'll see how this trade plays out.

Win or lose, I'll be back in just a minute to give you the full result.

*

INTERLUDE MUSIC

B-ROLL: Fast-forward of Grant doing various activities
Watching TV, Walking around with a mask, listening to music
Caption: Dates flash, one by one:
1 day, 2 day, 3 day...

*

GRANT

(different setting, solo — candid)

<to wide>

(caption: 3 days later)

Hey, it's Grant. It's now been three days since I placed that trade with my Dad.

Let's see what happened...

<B-ROLL: CGC chart>

We placed the trade just three days ago.

Again, with no idea what would happen next.

Dad thought Canopy Growth would go up.

Was he right?

<B-ROLL: CGC chart>

Sure enough!

I still don't understand how he knew... but man, that thing jumped almost immediately!

Take a look...

Canopy Growth rose from \$7.49 all the way up to almost \$9.61 in three days — even HIGHER than my Dad predicted.

I guess he's got a crystal ball after all.

GRANT
<to wide>

But here's the really cool part...

Canopy Growth stock popped 29% in just a few days — just like my dad predicted...

But because of my Dad's technique, we bought options instead... And I chose the RIGHT option from a list of literally hundreds...

As a result, I made a 107% gain by today, Friday, just three days later. That more than DOUBLED my money in three days!

Almost 4 TIMES MORE MONEY than if I'd bought the stock.

<B-ROLL: CGC chart>

Here's the breakdown...

I invested \$520 into the option.

Altogether, that gives me a total profit of \$556.40.

GRANT
<to wide>

To me, that's crazy!

When I was working at a valet service parking cars, it might take me four or five days to make five hundred bucks, and I'd be hustling back and forth for hours at a time.

This was a lot faster...and a LOT more fun.

And I learned a ton along the way.

I'm definitely planning on using this technique over and over again. I mean, just think! If I'd had a little more encouragement (and a little more cash), I could have put in ten times the investment and made over \$10 grand in THREE DAYS!

But chances are, if you're watching this, you have the same big question I still do...

*

<WARDROBE CHANGE>

GRANT
(different setting. Seated for interview.)

Dad, how did you pull this off?

JEFF
(Seated for interview)

I didn't place the trade. You did!

GRANT

Right, but... how can I do this all the time?

I mean, how did you know that stock would move so precisely, at that exact moment in time, and pinpoint the perfect option?

JEFF

You're not the first person to ask, Grant.

Over the years, I've received so many requests to teach this thing that I finally just wrote a research report, describing the full technique.

<Report image: *Spotting the Perfect Trade: How to Make \$1,000s a Week With Options*>

It's called: *Spotting the Perfect Trade: How to Make \$1,000s a Week With Options*.

<JEFF HANDS REPORT TO GRANT>

So Grant, here you go. You can read it right now.

<to wide>

And if you're interested, you can claim a copy too.

Inside, you'll learn all the details I didn't have time to cover with my son today.

An overview of how my technique works... including technical tricks to seeing exactly when the masses are wrong, and how to use that information to see which stocks are on the verge of going up or down.

And the all-important secret of how to pick the right option at the right time, the most valuable skill I can teach anyone.

GRANT
(holding the report)

Awesome, I can't wait to read it.

But Dad, let's get real for a second.

This obviously takes a lot of expertise.

How can I and everyone who's watching this make money with your technique, every single week, without having to spend DECADES getting good at it, the way you have?

JEFF

Well, there's a shortcut to doing this...

<Photo: 8-year-old Grant with Jeff>

You see, Grant... back when you were just 8 years old, I quit managing money for the 1%, CEOs, Executives, pro athletes...

By that point — I'd made enough money trading options that I wanted to spend more time with you, your mom and your brother.

B-ROLL: Jeff on balcony, contemplative

But I couldn't say goodbye to options.

You see, trading's almost like an addiction. Once you figure out how to make good money, you're hooked.

I didn't want to work 16-hour days anymore on the trading floor, managing other people's money. But I still wanted to be involved in the market. So I thought, why not share this thing online?

GRANT

Like on Twitter or something?

JEFF

This was back before Twitter.

Instead, I worked out a deal with a publisher on the East Coast.

And I began sharing my best options recommendations over email, every single week.

GRANT

So that's where all those notes come from.

People who subscribe to your emails...

JEFF

That's right. I launched my own trading research service, called *The Delta Report*.

Every day, I apply my technique to the market, and I email my favorite options recommendation to anyone who's interested once a week.

No experience necessary.

GRANT

Why do you call it *The Delta Report*?

JEFF

"Delta" is the name for how quickly things change in the market.

And as you've seen, when things change in the market, even by just a small percentage, that's an opportunity.

GRANT

Gotcha.

So *The Delta Report* is basically a shortcut for anyone who wants the chance to look over your shoulder and make money with your options technique... without having to wake up before dawn, like you... and do all that technical analysis.

JEFF

That's right.

Now that I quit managing money at my private firm, every week, usually on Tuesdays at 10 AM, I share my favorite options play of the week with *anyone* who's interested.

GRANT

Including me?

JEFF

If you're serious about trading options, Grant, and you're willing to learn, I'd be happy to let you receive *The Delta Report*, sure.

<to wide>

But I will say this to everyone watching.

I don't recommend you get started unless you have about \$10,000 in capital set aside. Now, it's none of my business how much money my readers put into their positions, or even if they choose to invest at all.

But I've found that folks with at least \$10,000 to play with do best.

GRANT

But I can start out smaller if I want to, right?

JEFF

Sure, you can start out however small you want.

<to wide>

I've just found that if you're not willing to invest at least \$10,000... chances are you're still in the very beginning stage... and *The Delta Report* isn't suitable for you.

GRANT

But really, Dad, I don't need any experience to get started, right?

I mean, you just saw me double my money without having any knowledge at all.

JEFF

Right, you don't have to be an expert to get started with *The Delta Report*. I've worked hard to make sure that anyone can use it, without any formal education.

I just know from experience that folks who do best with this technique have already been around the block with ordinary investing, and, frankly, they're just sick and tired of stocks and ready for something new.

Like I said, life is too short to settle for 5% gains on stocks that can crash at any time. Especially in this rollercoaster market we're seeing today.

<to wide>

Just keep in mind, you'll have to make a few clicks online to set up your brokerage account for using options, if it's not set up already. It only takes a few minutes. And I'll show you exactly what to do.

GRANT

Well, Dad, I'm going to read your report for sure. But for now, what else can I do to learn more?

JEFF

We spent a fortune creating something I'm really proud of...

<B-ROLL: Brady Bunch grid of DRT training videos>

It's a series of online training videos... designed to show anyone how to get started using options.

Altogether, it's a Master Class of 8 different videos...

Each is brief, easy-to-watch and explains step-by-step everything you need to know in order to follow my trading recommendation every week – for a chance to make thousands of dollars a week.

<to wide>

When you sign up for *The Delta Report*, you get free access to the 8-video Master Class.

For example, suppose you're completely new to trading options and you'd like a quick course on getting started. In that case, watch Video #1.

Or maybe you already have experience as a trader... and you just want some specialized tips and insight on how to predict where the market is going next. In that case, watch Video #8.

But you don't have to watch any of the videos, if you don't want to. The most important thing is the email I send each week, with my latest recommendation.

GRANT

Got it. Well Dad, thanks for everything. I've had a lot of fun with this trade.

And I'm going to make sure I get access to the *Delta Report*, because I want to keep doing this and I want to learn more.

And it sure sounds a heck of a lot easier — having you do all the hard work — and just following your recommendations...

Work smart, not hard... right?

JEFF

Grant, you may be too smart for your own good.

But it's been my pleasure. I've really enjoyed walking you through my technique.

<to wide>

Now, in the next few minutes, we're going to hold a Q&A to answer the most popular questions. And I'm also going to give you a FREE recommendation, so you can go off and try this yourself.

But if you're interested in what I've shown my son today, and you'd like the chance yourself to make money trading options... I need to make one thing clear.

For over two decades, I only shared my options plays with about 100 clients at a private money management firm in San Francisco.

I hand-selected these folks from some of the wealthiest VPs... CEOs... and entrepreneurs in Silicon Valley. Almost every client was a millionaire... and we generated millions of dollars more in profit.

The account minimum was \$250,000, and I collected a standard 2% fee.

In other words: For decades, you'd have never been able to access my work — and if you had, you would have had to pay up for it.

I was essentially “off-limits” to all but the wealthiest executives.

That's why I personally think the *Delta Report* offers the best deal you're ever likely to come across for a trading research letter...

For a tiny fraction of the price I once charged my wealthy clients... you get full access to all my best weekly options plays, for the next 12 months. Plays that could realistically double your money in under 30 days — like the one I showed my son.

As you've heard from my readers:

[TESTIMONIAL]

John M. said: "Sir, you now have my attention. I joined the team and in less than one week I am up over \$3,600 after 4 trades. You passed the test Jeff. Let's GO!!" —John M.

Gernot R. is now closer to a relaxing retirement...

"My portfolio was down to about \$170K during 2008 and just hit \$480,000. I am up over 40 % YTD. A lot of the credit for that goes to Jeff." —Gernot R.

<TEXT ON SCREEN: The investment results described in these testimonials are not typical; investing in securities carries a high degree of risk; you may lose some or all of the investment.>

Having said that, when it comes to the best investment research... you often get what you pay for. That's why I've always insisted on charging a higher-than-usual price for the *Delta Report*.

One full year of the *Delta Report* normally costs \$5,000.

If that sounds like too much money, then it probably isn't for you.

One of the reasons that we charge a lot is to keep it small. *Delta Report* is best suited for folks who are serious about seeing the best trading opportunities and are willing to pay for our elite research.

But as I told my son today...

I think trading options with my technique is actually less-riskier than buying stocks.

It allows you the opportunity to make a lot more money, faster, especially in the kind of market we've been seeing in 2022... where we recently saw a one-day battle between bulls and bears that's happened just two others in the last century.

It's anyone's guess where stocks will go next.

And as you've seen today with my son Grant, I love teaching this stuff to other people, and sharing a new way of making money.

That's why – if you're truly interested in learning how to make money with options, and you're willing to get started now – I've arranged to make you a special offer.

If you sign up today, before this offer expires, I'll knock **\$2,500 off** the price.

In other words, we're giving you a 50% discount... which means you can receive one full year of the *Delta Report* for just \$2,500.

Now, that's the discount. But it gets even better...

Grant suggested I offer a special "FAMILY DISCOUNT" to folks like you who are watching tonight.

That means if you get in today, I'm willing to throw in a FREE bonus year.

You'll receive two full years of *The Delta Report* for HALF the price of one.

And that's not all... If you get in by MIDNIGHT TONIGHT, I'll also cut another \$500 off the price.

You'll pay just \$2,000... which gives you two full years of the *Delta Report* for less than half the price of one. But only if you get in before this offer expires at midnight tonight. After that, you'll be too late.

It's one of the best offers we've made in years.

To secure your spot, simply click the link beside your screen right now, before this special offer expires.

Or call us right now at 1-866-704-5971.

GRANT
<to wide>

And that reminds me...

I also told my Dad to make sure EVERYONE who watches this special event and joins *The Delta Report* can receive FREE access to one of the coolest features I've seen my Dad create.

Dad, can you talk about that?

JEFF

Of course.

<to wide>

When you join the *Delta Report*, you'll receive a special bonus feature that could help you make even MORE money with your subscription...

<B-ROLL: Jeff at computer>

You see, the best trading opportunities often happen very quickly...

At least once a week, I come across a situation for a substantial potential gain... over a matter of HOURS.

It might be something I spot at 1 o'clock in the afternoon, for example, and will recommend closing by 4 that same day.

That's why we developed a real-time feature.

<B-ROLL: *Delta Direct* screenshots>

It's called *Delta Direct*.

You'll receive real-time updates throughout the day – detailing super-quick trading plays that could hand you thousands of dollars in gains in just a single afternoon.

GRANT

And in *Delta Direct*, you do hour-by-hour commentary on the overall market, right? Like, that's where you post all your predictions on when the next rally or crash will happen...

<B-ROLL: Screenshots of *Delta Direct*>

JEFF

That's right. I typically post two or three times a day, commenting on what the market's doing and where I think stocks will move next over the following hours.

It's how I spot some of the best trade recommendations.

For example, I remember spotting a play in the tech sector over my morning coffee one day. If you'd seen my frantic post and jumped in, you could have more than doubled your money in just 48 hours.

GRANT

Awesome.

JEFF
<to wide>

Just remember: If you're interested, I urge you to get in now... before midnight tonight. You'll receive two full years for half the price of one. Plus an extra \$500 off.

Just remember: If you're interested, I urge you to get in today... before this offer expires. You'll receive one full year for half the price. Plus, you'll get an extra \$500 off today.

Just remember: If you're interested, I urge you to get in today... before this offer expires. You'll receive HALF OFF the price — a \$2,500 savings.

Along with free access to my real-time feature *Delta Direct*... for the next 2 years.

As a new member of the *Delta Report*, you'll receive my newest options trading play this week at 10 a.m. Eastern.

Like every options play I recommend, you'll have the potential to make a 100% gain or better... in as quickly as a few weeks to a few days. Here's just a snapshot of the kind of gains I've shown my readers over the years, like:

<SCROLL GAINS OVER JEFF AS HE CONTINUES TO READ>

<TEXT ON SCREEN // & D&D Page: "These are some of my best calls. All investments carry risk and past performance does not indicate future success. The average return since inception of Delta Report is 14%.">

As a Delta Report subscriber, you'll receive a new options recommendation by email once a week at 10 AM ET for the next year, along with full details on how to execute it.

Plus, I'll post real-time updates about the market, including my latest predictions... and any additional quick plays I see... which you can receive on our app, by email, on our website, or all three.

Within a few minutes of joining, you'll receive a password to the *Delta Report* website, where you'll have full access to:

- My research report: *Spotting the Perfect Trade: How to Make \$1,000s A Week With Options*
- *Delta Direct*
- And my 8-part Options Trading Master Class

And by the way: It'll only take you a few minutes to skim through all these materials and learn everything you need to get started right away...

I'll be in touch with you throughout the week to let you know of any important updates, and when to close each new position.

For example, right now, I see a HUGE opportunity taking shape in the gold sector. I'm finalizing the details on a trading recommendation that could make you 3 to 4 times your money if you get in immediately — when I release it in the *Delta Report*.

So if you're interested, I urge you to get in today for the best possible deal.

You'll save 50% and get a free bonus year, if you get in before this offer expires. Plus, free access to *Delta Direct* for two years.

Plus, you'll get an extra \$500 off if you order by midnight tonight.

You'll save 60% — a \$3,000 savings — if you get in today, before this offer expires. Plus, you'll get free access to *Delta Direct* for one year.

You'll save 50% — a \$2,500 savings — if you get in today, before this offer expires. Plus, you'll get free access to *Delta Direct* for one year.

And frankly, all the evidence we've seen over 17 years shows that you could make back your entire subscription cost on just a single trade.

Having said that, we offer a 100% Satisfaction Guarantee.

Take the next 90 days to look at the *Delta Report*. I think you'll experience the same kind of success that my son, Grant, just did.

But if you're not happy for any reason, no problem. Simply contact our Member Services team, and you can receive a FULL refund in the form of credit. And you can apply that credit to any other trading product from our corporate publisher, Omnia Research.

That includes an options-trading product by former \$800 million money manager Larry Benedict, who's been profiled in the legendary *Market Wizards* book for his success.

So if you enjoy our trading research, you're fully protected.

The bottom-line is: You can either keep investing the old-fashioned way, and hope you pick the right stocks and avoid the next crash...

OR... you could learn how to double or triple your money, over and over, without ever buying a single conventional investment... no matter where the market goes next... using the same technique that helped me walk away from my career as a \$200 million money manager at age 42.

To secure your spot, simply click the link beside your screen right now.

Or call us right now at 1-866-704-5971.

And with that, let's kick off the Q&A. Grant has agreed to be the moderator.

And don't forget: Tonight, you'll also receive a FREE recommendation. So be sure to have a pen and paper handy to write it down.

<to Grant>

Grant, take it away...

GRANT
(reads all questions off an iPad)

OK Dad.

First off, one common question is: Do you use special computer software to find the trades you recommend?

JEFF

Nope. It's just me and a cup of coffee, and my simple home computer.

I understand that Wall Street spends millions of dollars developing computer programs that can trade in fractions of a millisecond and use algorithms to make money.

But that's not what we do in the *Delta Report*.

My technique has always relied on my own analysis of hundreds of stock charts, my 40 years of experience, and hidden information most people never consider...

For example, with your Canopy Growth trade, I used a combination of stock patterns and what we call “divergence from the moving average” to identify a big sudden move in the stock.

Computers can’t do that kind of analysis... because a lot of it’s based on experience and intuition. In fact, sometimes I’ll turn on the TV and judge sentiment just by looking at the anchors.

Do they seem excited? Worried?

<to wide>

So frankly, Wall Street can keep their fancy computer programs. Personally, I’d rather wake up at 4 a.m., look at 1,200 different stock charts, and apply what I’ve learned as a trader on the front lines for 40 years now.

GRANT

But Dad, hold on.

What makes you so special? I mean, aren’t there literally tens of thousands of people on Wall Street who analyze stock charts and pay for behind-the-scenes information and that kind of stuff...?

JEFF

Of course. But the technique I’ve been describing today depends on a VERY PARTICULAR way I’ve developed to analyze stock charts.

I ignore a lot of the things that traders consider important.

For example, I don’t really care about price-to-earnings ratios, the dividend yield or anything like that.

<B-ROLL: Detailed stock chart>

A stock chart is a living and breathing line with dozens of items you can analyze. Like 50-day moving average, 10-day moving average. And so on. I’ve developed a way to look at ONLY the things that matter... and ignore everything else. And I’ve found that I don’t need computer software to do that.

GRANT

Let's give an example of that...

One thing you've mentioned to me is how important earnings announcements are. But you do something kind of funny with those announcements... Can you talk more about that?

JEFF

Sure. We've all seen how a stock can rise or fall dramatically based on the earnings announcement. But in *Delta Report*, we only care about how the market reacts to earnings over the very SHORT TERM.

In other words, I couldn't care less about the company itself, and how its earnings affect its long-term health.

It might be going out of business, for all I care... and I'd still consider a move in the stock as a high-upside trading opportunity.

GRANT

Right. And I'd say your *Delta Direct* feature is a good example of how you do that.

For example, that 100% gainer you saw in one day on Guess... That came after an earnings announcement, right?

JEFF

Sure did. Its earnings were better than expected... but I couldn't have cared less about the company's growth. Or whether it would overcome all the problems faced by retailers. I just knew the stock would go up over the following days, and that was all I needed.

GRANT

I was also impressed by a 70% gain you saw in just 3 days on Tupperware.

I mean, Dad, that's crazy.

Tupperware? That's actually a company?

JEFF

It is. Take a look...

B-ROLL: [Tupperware chart](#)

A few Christmases ago, on December 16th, Tupperware caught my attention. It had missed its earnings expectations, and the stock had tumbled 10%.

Then came even more bad news.

It cut its dividend , and the CEO stepped down.

So, the stock had been headed for the toilet over the previous few months. And a lot of people thought it would CONTINUE going down.

GRANT

But not you, I bet!

JEFF

Not me, no. I found the right options play for it... And sure enough, you could have come shy of doubling your money 3 days later. Just in time for Christmas.

GRANT

But what was your secret there, Dad? I mean, how did you know the stock would go up... and even predict the exact price it would rise to?

JEFF

Well, Grant, you have to read that report I gave you.

<to wide>

And that goes for you too.

Once you join *The Delta Report*, take a very close look at my special report. I think you'll find that the way we analyze a stock's movement is unlike anything you'll find anywhere else.

GRANT

Dad, speaking of that 70% gain on Tupperware and looking through your track record...

I notice that sometimes the gains you log aren't always triple-digits.

<consulting iPad>

Like, for example, you saw a 53% gain in 1 day on one of the worst days in stock market history: March 23rd, 2020.

That was on the Financial SPDR fund.

I know you want your readers to double their money... so... Do you consider those double-digit gains a disappointment?

JEFF

Absolutely not.

Would you consider a 53% gain a disappointment? Not at all.

In times of crisis... like we've over the past two years... you've got to be quick to take a profit. On March 23rd, the market saw its deepest lows of the coronavirus crash...

Stocks had fallen so hard, so fast, trading was halted three times in two weeks.

Most people were panicking.

So, yeah, I always strive to show my readers a chance to double their money.

But if I see a chance to nail a solid double-digit gain, like that 53% gain at the bottom of the market, when everyone else was panicking, I'll do that all day long.

And that money really adds up.

GRANT
<consulting iPad>

Got it, and I see here that sometimes you'll recommend selling half the position to lock in a gain... even if it's only double digits.

For example, you showed a 100% gain in just 11 days back in December on SOYB, a commodities trade... You recommended closing half the position... and then let the other half ride all the way to January 4th, 2022 .

Why?

JEFF

Well, according to my technique, the stock had quite a bit more room to run. So we locked in that 100% gain on a half position... just in case the trade turned against us.

But in this case, it didn't! We ended up closing the second half of the position for a 167% gain. Enough to more than double your money.

So, often, playing it safe can help you lock in big gains, while still reaching for the home runs.

GRANT
<consulting iPad>

Moving on to another question...

It seems like speed is really important to you...

For example, you showed a 105% gain in just 7 days back in February 2020, right as the coronavirus crash was first taking shape.

And your readers seem to love this.

Do you ever recommend holding options for the super-long-term... like, just to squeeze out some extra gains?

JEFF

If it makes sense, sure. But in general, we're looking for EXTREME SPEED... because in today's volatile market, stocks can be up 300 points one day and down 1,000 points the next.

Long-term holding just doesn't work in this environment.

My technique allows us to see exactly where a stock could be headed over the short term... as short as a few days to even just a few hours... which is the best way to play the volatility we've seen this year.

That's what we did with your Canopy Growth trade.

The flip side of that is, I can't always predict the long-term future.

But with options, it doesn't matter.

As long as I know where things are going for at least the next week or two, that's just enough time to get in and out – with a very nice gain.

GRANT

Dad, I know you do a ton of research for every recommendation. But, reading through your material, it seems like occasionally, you base a recommendation on just one tiny little thing in the stock chart.

JEFF

Sure. Take the coronavirus crash, for example.

In January 2020, the market soared. But on February 5th, I wrote in the *Delta Report*:

B-ROLL: Quote graphic

“The stock market finally showed some weakness last week.

The S&P 500 hit a new all-time high at 3333 on January 17. It closed at 3225 last Friday. That’s a drop of 3.2% – which really isn’t all that bad.

But, it was enough to wipe out all of the gains for 2020... I’m looking for a deeper correction in the days ahead.”

GRANT

So how’d you play it?

JEFF

At the time, the sector that looked most vulnerable to a deeper correction was technology.

<B-ROLL: XLK chart from DRT 2-5 issue>

Take a look at this chart of the Technology Select Sector Fund (XLK).

GRANT

Looks like it was doing pretty well...

JEFF

Yeah, that’s what 99% of people saw.

But, if you look closely at the chart, you’ll notice that while the ETF made a new high, the various technical indicators were trending lower.

GRANT

What technical indicators?

JEFF

The MACD, RSI, and CCI. See the little red lines?

Now, don't worry what these mean for now. The point is that these are little-known ways of measuring how strongly a stock is trending up or down. And here, all of a sudden, we saw what I call "negative divergence."

At the time, I wrote in the *Delta Report*:

<B-ROLL: Quote graphic>

"This negative divergence was not in place prior to last week's decline. But, it's in place now. And, it's a warning sign that the current momentum is fading and the sector may be ready to shift trends from bullish to bearish."

So on February 5th, I fired off a recommendation to my readers. And sure enough, XLK did exactly what the chart suggested it would do. We saw a nice 144% gain in 19 days... and got out just before the first wave of the coronavirus crash.

GRANT

And of course, that was your trade of the week back in February, 2020, which is the primary focus of the *Delta Report*.

But you're also giving away FREE access tonight to *Delta Direct*, where you find plays like that all day long, right?

JEFF

Absolutely.

GRANT

And Dad, that brings me to one of the other big giveaways we're doing tonight.

You once told me that you have dozens of formulas and tricks and whatnot that go into your technique. Which you NEVER reveal in public. But tonight, right here, you've agreed to give away what you call a "5-minute shortcut" that anyone can use to potentially make 100% gains or better with literally just ONE GLANCE at a stock chart.

Are you still willing to do that?

JEFF

I am.

<to wide>

If you're watching at home, take out a pen and paper and write this down.

This is one of my favorite secrets.

Take a look at this chart for PayPal, for example.

<B-ROLL: PayPal chart>

Now, PayPal has had a tough year. Their most recent financial results were a huge disappointment... And the stock has plummeted 47% this year alone...

But if you've been paying attention, you'll remember, with my technique — none of that matters.

See — this is the stock chart most people were looking at.

GRANT

Ouch...

JEFF

But now, here's the chart I was looking at...

<B-ROLL: PayPal chart with all the lines>

GRANT

Whoa... What are all these extra lines?

JEFF

This is what a professional trader looks at. There's a lot more here than just the share price.

You also have what's called the 50-day moving average... the 200-day moving average... the 9-day exponential moving average... volume... you name it. And of course, to most people this is overwhelming.

GRANT

Right, I can barely tell what's going on here.

JEFF

But here's the trick I want to reveal today.

<B-ROLL: Each vanishes as mentioned>

You can ignore ALL THE NOISE in this chart.

For example, get rid of the volume. Get rid of the 200-day moving average.

Get rid of all this other junk.

And what are you left with...?

GRANT

The share price... and the 50-day moving average.

That's the average share price over the last 50 days, right?

JEFF

Very good, Grant. You're a quick learner.

Now, here's the secret. It's simple, but surprisingly effective.

Anytime a stock moves far away from its 50-day average, it's almost certain to "snap back" to that line, like a rubber band.

GRANT

I'm confused by that. Can you explain more?

JEFF

Think of it this way. You're an athlete, right?

Well, suppose you're running laps at the track.

You might run the first lap incredibly fast, in just 3 minutes.

But by the third lap or so, you start getting tired. And it might take you 4 minutes. Or even 5 minutes.

Off and on, throughout your run, you'll constantly revert back to an average pace... a pace that's particular to you.

And stocks are the same way. They have an average share price they return to again and again. And if you can spot the "extreme" movements away from that average price, you can find fantastic trading opportunities.

GRANT

Got it. So in this case, PayPal had moved far away from its average share price of \$137.28 per share.

And you used your technique to find the right option to take advantage of a potential move BACK to that average price.

JEFF

Sure did. And it worked like gangbusters. You could have made a 173% gain in just 2 days.

GRANT

Does this trick have a name?

JEFF

It's often called "reversion to the mean."

And it's just one of lots of little things that go into my technique.

GRANT

And how often do you apply this trick?

JEFF

Actually, it's one of my favorites.

For example, it's how I saw a 142% gain in 26 days on the Invesco DB Agriculture Fund just last month.

GRANT

Cool.

JEFF

<to wide>

So, there you go...

Even if you decide not to use the *Delta Report*, you've now got one of my favorite trading secrets to go off and start using on your own.

In fact, through this special offer, we're also giving away a talk I gave at this year's Legacy Investment Summit, Legacy Research's most exclusive gathering, where I detail a variation of this secret.

But personally, we urge you not to try this by yourself... because the fact is, you still need a technique to choose the RIGHT option from among the hundreds that are available for each stock.

To get started before today's offer expires, click the link beside your screen to place your order.

Or you can call us right now at 1-866-704-5971.

Remember, you'll receive 50% OFF... and ONE FREE BONUS YEAR. That's two full years of the *Delta Report* for half the price of one. Plus, if you get in by midnight tonight, you'll get an extra \$500 off.

Remember, you'll receive 50% OFF — a \$2,500 savings. Plus, you'll get an extra \$500 off. So altogether, you'll save \$3,000 if you sign up before today, before this offer expires.

Remember, you'll receive 50% OFF — a \$2,500 savings — if you sign up before today, before this offer expires.

GRANT

OK. Now Dad, moving on to the next question...

Earlier you said we might be headed for a bear market this year. But you're not very worried about it. Can you talk about that?

JEFF

Well, Grant... There are any number of factors that could cause another wave of panic in the stock market this year.

Look at the lingering effects of COVID-19... combined with inflation... that's been enough to cause a new wave of panic in the stock market this year.

<to wide>

Think about it...

Do you really think the market will hit new highs when the Fed is starting a tightening cycle? When inflation has hit 40-year highs, oil prices, a 7-year high, there's political uncertainty, and global tensions are increasing?

GRANT

Probably not... So what'll this panic look like?

JEFF

Well, if we see a bear market, then it's likely to play out in 3 distinct stages...

<TEXT ON SCREEN: Stage 1: investors dump their stocks in an attempt to hold onto any gains from the bull market>

The first move is the panic stage. That's the initial move lower that kills the bull market and brings the bear out of hibernation.

This might be what we're experiencing right now.

Stocks have come under a lot of selling pressure so far this year. Many of the most beloved names of 2021 have gotten clobbered.

And, as the market selloff continues, investors dump their stocks in an attempt to hold onto any gains from the bull market.

Lots of last year's gains were wiped out in just a couple of months.

GRANT

Gotcha. So that's the first stage of a bear market. What's the second stage?

JEFF

The second stage is an "oversold bounce."

GRANT

"Oversold bounce?"

<TEXT ON SCREEN: Stage 2: Over-selling pressure creates a 'snap back' rally, typically recovers 50 to 70%>

JEFF

Yes. This happens when stocks get so oversold, and the proverbial rubber band is stretched so far to the downside, that a "snap back" rally is inevitable.

In my experience, the bounce stage typically recovers 50% to 70% of the initial decline phase.

So, if this year's low near 4,100 proves to be the deepest low, then the oversold bounce should recover between 50% and 70% of that decline we saw in stage one.

GRANT

OK. That doesn't sound so bad. What's the third stage?

<TEXT ON SCREEN: Stage 3: "Panic stage" wipes out about half the value of the stock market>

JEFF

The third and final stage of a bear market is arguably the worst part: A brutal decline that takes out the "panic stage" low and ultimately wipes out about half the value of the stock market.

GRANT

Ouch. So if we see that third stage – that brutal decline – what happens with your technique? How would you react in the *Delta Report*?

JEFF

We would be overjoyed.

Don't forget the examples I showed you earlier, Grant. Our technique gives you the chance to make money whether stocks go up, down, or nowhere.

A crash is one of the most exciting events I look for, because it opens literally dozens of opportunities to profit as stocks make big overnight moves. Consider 2008, for example.

It was a national disaster when U.S. households lost \$5 trillion when the market crashed that year. But guess what?

2008 was one of the best years of my career.

You could have *doubled your money 10 times* that year with my technique – even during the worst panic in a generation.

GRANT

And you believe 2022 could show a similar opportunity?

JEFF

We've already shown some fantastic gains...

For example, take this recent feedback from a subscriber...

He wrote: "Jeff, I closed out my position on XLF today as you recommended. This trade brought my trading account back to where it was before the crash. It also made up for some of the mistakes that I was making before reviewing your lessons."

The investment results described in these testimonials are not typical; investing in securities carries a high degree of risk; you may lose some or all of the investment

GRANT

Awesome. So by using your technique, some people could actually end up doing even better in a bear market than during a bull market?

JEFF

Yep. That's the beauty of being a short-term trader, and the beauty of knowing how to spot the perfect options play.

GRANT

OK, but what about all the other crashes? How'd you do back in the dot-com era?

JEFF

On March 2nd, 2000 — 8 days before the dot-com cash — I made a single trade that netted me more money than anything else I've ever touched in my life. You can ask your mother about that one. I was dancing in the streets. It's what helped me walk away from my career in money management when I was just 42.

And going back to the Crash of 1987... I made 10 times my money the Friday before Black Monday. As always, just by using my technique.

GRANT

Dad, speaking of big moves in the market... which stocks do you think will shoot up the most this year?

JEFF

I think some of the best-performing stocks for the rest of this year will be in the biotech, cannabis, and precious metals sectors.

GRANT

Why do you say that? The same reason as my Canopy Growth trade?

JEFF

Well, for the most part, they're trading at historically cheap valuations. They lagged the market for most of last year. So, they're not as vulnerable to a "shock."

And yeah, as we saw with your Canopy Growth trade, a lot of biotech and gold stocks still need to play "catch-up" with the rest of the market.

GRANT

OK, but what about tech companies? I mean, Apple's more than quadrupled over the past decade. Don't you think we'll see a big jump in other tech stocks?

JEFF

Actually, I believe the exact opposite, Grant.

<to wide>

This is something I love doing, by the way... targeting stocks I believe are due for a fall.

Back in 2019, for example, I publicly predicted the retail company Wayfair — ticker symbol W — would see a massive drop. The stock went on to fall 59% by March 2020.

GRANT

Wow. You nailed it.

JEFF

And today, Grant, I think the next companies to fall will be in tech.

Tech stocks are now as expensive as they've ever been, versus the rest of the market. Look at Tesla, for example. It's had a parabolic run-up in 2020 and 2021. It has all the characteristics of a "bubble" stock.

So, that's a big red flag.

Most parabolic moves tend to give back all their gains over the next year. So, I think Tesla could fall down to \$350 or so.

GRANT

Nice. Well, I'll be sure to avoid Tesla.

But of course, even though you're predicting Tesla could tank...the right option could make you a killing on a move like that, right?

JEFF

You bet. Again, that's the beauty of options.

When you buy stock, the only way to make money is for the stock to go up... But with options, you can make money whether stocks go up or down.

GRANT
<consulting iPad>

OK, Dad. Great. Here's another question...

"I've always been scared of options. But I'm excited to try Jeff's technique. If I'm not happy, and decide this product isn't right for me, can I get my money back?"

JEFF
<to wide>

We offer a 100% Customer Satisfaction Guarantee.

Now, keep in mind: **We can't offer a straight cash refund...** because too many people would sign up and grab a free copy of my report and videos, then cancel. And that's not the way our business model works.

But—

GRANT
(interrupts)

But you want your readers to be happy.

JEFF
<to wide>

Of course. We want you to be happy. So here's our offer.

Sign up right now – before this offer expires – for the best possible deal on the *Delta Report*. Look over our free training videos, research report, and all of our recommended trades for the next 90 days.

We doubt you'll ask for a refund, because some folks make back the cost of their subscription on just a single trade.

But if you're not happy, simply contact our Member Services team within 90 days and you'll receive a FULL CREDIT in the amount that you spend today to apply to any other trading product of your choice from our corporate publisher, Omnia Research.

So if you like the work we do, this is one of the best offers we can make.

GRANT
<to wide>

On a personal note, I want to add to that.

My Dad spends hours at his computer each day, working on the *Delta Report*.

He takes the feedback very seriously... because he's always been the kind of guy who believes in doing right by others.

One example of that is Nike.

Dad, you remember that?

JEFF

Of course I do.

GRANT
<to wide>

In case you don't remember, back in 2018 Nike got involved in a controversy with the American flag.

They were disrespecting it.

So my Dad took immediate action. Dad, tell the audience what you did.

JEFF
<to wide>

Well, it's simple. My father — your grandfather, Grant — served 12 years in the U.S. Air Force. When he passed away a few years ago, our family received a folded American flag from the Air Force as a thank you for his service.

<B-ROLL: Photo of Jeff's father in uniform>

My Dad dedicated a large part of his life defending this country.

So, the American flag is an important symbol to me.

When I saw Nike supporting that kind of disrespect, I immediately sold all my shares of Nike stock, despite it being one of the best stocks in my portfolio. I'd rather lose money than ever sacrifice the ideals that my father taught me to believe in. That goes for the American flag, and it goes for the way I do business.

So once you sign up, if you're unhappy with something, let us know and we'll make it right. Period.

GRANT

And Dad, speaking of doing right by your subscribers... you've worked hard to make sure ANYONE can see the kind of gains we've been talking about today, no matter what their background or education, right?

JEFF

Absolutely. I'll tell you right now, if you're willing to take just 15 minutes a week to use my technique and learn, you have what it takes to make \$1,000s a week. You don't need to be good at math, or good at finding patterns, or anything other than someone who reads a simple email each week.

I've heard from people who've never done any trading at all, and professional traders who just want specialized insight. This technique can work for anyone.

GRANT

OK, Dad. Let's get to the good stuff.

Your favorite sector is gold, right? Where do you think gold is headed next this year?

JEFF

Last year, I set an upside target of \$2,000 for gold. And it recently hit that target...

At that point, gold was overbought and overextended and in need of a rest — to consolidate its recent big move higher.

But, I am looking for a much higher price on gold in the months to come. Maybe even something close to \$2,500 per ounce. And, if gold rallies like that, then gold mining stocks are going to do even better.

I love trading gold mining stocks. And, we have an excellent track record of success in that sector. I expect we'll have lots of opportunities to profit in the gold stocks this year.

- **100% in 45 days** on Gold Miners Fund
- **47% in 11 days** on SPDR Gold Shares

GRANT

Cool, thank you for that prediction.

And I assume you'll be playing each of those gold moves in the *Delta Report*?

JEFF

100%, Grant.

We're seeing some major action in the gold market right now.

But like I said, when gold goes up — even just a little bit... the right options trade could hand you 5 times, even 10 times more money...

Take February, for example... gold shot up from about \$1,800 an ounce to about \$2,050. Now, if you just own bullion, that's about a 14% move...

But instead, I recommended a trade on a gold miner ETF and we booked a 150% gain in 8 days.

And we've been making winning trades in the gold market for years.

In December 2017, we saw a 154% gain in about a month in the *Delta Report*.

And we saw two different gains over 100% on gold back in January 2018.

And last November, for instance, I recommended a gold play and booked a 119% gain in 9 days.

In April of last year, we landed a 153% gain in 31 days on AEM.

And in March of last year, we nailed a 109% gain on GOLD in 44 days.

So just imagine what we could make when gold really starts to take off this year, driven by geopolitical conflicts... inflation... and more.

GRANT

Right, you've found something like 20 different opportunities to double your money in the gold market.

JEFF

Gold is a sector I'm always eager to take advantage of, because the action is very predictable over the short term.

Whether it's going UP or DOWN.

Over the coming weeks, I think we'll see even more opportunities to potentially double your money on the right gold options.

GRANT

Here's another popular question...

Do you ever recommend buying any stocks? Especially if you know a particular company's about to go up?

JEFF

Rarely. Why would I?

You could see 5 to 10 times more gains on the right options play. Of course, nothing is 100% guaranteed in the investment world, and not every position will be a winner... no matter what approach you take.

But after developing my own options technique and using it to successfully manage \$200 million, I think options offer a greater potential to make money than any other investment. And I've found that my particular approach offers far *less risk* than what you'd normally see with an options trade.

That's the whole purpose of why I run the *Delta Report*, and that'll never change.

GRANT

Dad, some people have approached you over the past 20 years and said, "I currently own a stock... And I want to juice the gains with options." What do you say to those folks?

JEFF

There are strategies for buying stocks and then using options to dramatically leverage your gain. And there are options strategies that allow you to generate a lot of income...

based upon an underlying stock that you may or may not end up buying when the trade ends.

But in *the Delta Report*, I don't specifically focus on either of those strategies. Occasionally, we'll recommend a trading play like that if the occasion fits, but it's rare. Mostly we're looking for standard options plays, which are easier and faster, in my opinion.

GRANT

OK, Dad. Well, that brings us to the last and biggest question.

And that is: What is the FREE recommendation you promised our viewers?

Which options play do you think could help anyone who's watching this see a 100% gain or better, as I did, beginning tomorrow morning?

JEFF
<to wide>

OK. Take out a pen and paper.

In short, [Jeff to record recommendation, audio only, shortly before we air the webinar. We will display it as a text slide.]

GRANT

Love it. And by the way, here's another comment from folks who may be watching at home...

"What if I have a question before I buy?"

<to wide>

Well, heck, I can answer that one.

If you have a question that we haven't covered yet, my Dad's customer service team is standing by right now to answer any questions you have about tonight's offer...

Keep in mind: They can't give out any personalized investment advice. But they can help you better understand what you'll receive when you sign up tonight for the *Delta Report*.

Give us a call right now at 1-866-704-5971.

You'll receive 50% OFF... plus, one free bonus year if you get in BEFORE this offer expires. And don't forget: you'll also receive an extra \$500 off if you get in by midnight tonight.

You'll receive 50% OFF... plus, you'll also receive an extra \$500 off if you get in today, before this offer closes. That's \$3,000 in savings.

You'll receive 50% OFF if you get in before this offer closes. That's \$2,500 in savings.

And remember: Today's offer comes with a 90-day 100% Customer Satisfaction Guarantee.

<to Jeff>

Well, Dad, that about wraps it up.

Any final words?

JEFF
<to wide>

My message is very simple.

If my 22-year-old son with no previous experience can double his money in three days using my options technique, so can you.

It's how I handled accounts worth up to \$20 million apiece at my old money management firm. My clients generated millions of dollars in profit whether stocks went up, down, or nowhere.

One note I'm especially proud of came from a wealthy former client who said, "No matter whether the market is moving up or down, Jeff Clark somehow manages to find a strategy that works. Overall, I could not be happier with his performance."

And remember...

Today, we're in the midst of one of the most exciting markets we've seen in a decade. As the Fed shifts gears on interest rates... and fears of a massive recession grow bigger... most people have no idea what's coming next.

But in the *Delta Report*, you'll have the chance to potentially double or triple your money, every week, without touching a single stock along the way.

I urge you to join us.

To secure your spot, simply click the link beside your screen.

Or call us right now at 1-866-704-5971.

GRANT
<to Jeff>

Excellent. Well, Dad, thanks so much for walking me through this trade. I can't wait to start doing this every single week.

JEFF

You're welcome, Grant.

<to wide>

Production Note: Insert caption: April 13, 2022

And to you at home, thank you for joining us.

Just keep in mind: This special offer expires soon... at midnight tonight.

Just keep in mind: This special offer expires soon...

So, if you're interested, order now for the best possible deal.

I'm Jeff Clark. Thank you for joining us. Goodnight.

April, 2022

PICKUP LINES

JEFF

Grant only agreed to appear in this event if I offer a special "FAMILY DISCOUNT" to folks like you who are watching tonight.

That means if you accept this offer today, I'll also cut another \$500 off the price... which gives you one full year of the Delta Report for just \$2,000 — less than half the price of one year.

But only if you accept this offer today, before it expires. After that, you'll be too late."

April 2022
