

Capital and Competence

TCF Capital, founded by Tomáš Čupr, is a strategic investment group building a technology-first ecosystem anchored by the reach and operational excellence of Rohlik Group. We focus mainly on these mandates: constructing an integrated longevity ecosystem and restructuring traditional companies through AI and process automation.

By leveraging synergies with our core assets and integrating newly acquired companies into functional ecosystems supported by our strong technological capabilities we create tech-enabled market leaders with defensible long-term value.

Strategic Focus: Three Pillars

APPLIED AI & SOFTWARE ENABLEMENT

Stage-agnostic strategy targeting AI-enabled software, infrastructure and automation—underpinning the Longevity and Business turnarounds pillars.

Dual mandate: deploying capabilities across the portfolio for operational alpha, then selectively scaling proven solutions externally as standalone products.

Focus: agentic automation in real workflows, operational platforms for modern commerce, AI-amplified software delivery and legal compliance.

Portfolio: Duvo.ai, Echota.ai, ComplifAI.

LONGEVITY

Building a vertically integrated ecosystem anchored around Pilulka and Macromo.

We deploy capital across the full maturity spectrum—from production capabilities of supplements and cosmetics, established supplement brands, to integrating early-stage AI startups focused on data-driven personalisation.

BUSINESS TURNAROUNDS CONSUMER STAPLES

Targeting struggling mature consumer staples companies (EV up to €100m) with strong brands, unique products and own production.

Value creation driven by our marketing & sales capabilities, operational stabilisation, technology integration (automating workflows, improving planning & cash conversion) and leveraging portfolio distribution/logistics (Rohlik/Pilulka).

Key example: Töpfer GmbH.

GEOGRAPHY

Geography

Primary: CEE + DACH. Secondary: selective broader Europe / transatlantic opportunities where we can underwrite a clear execution advantage and add measurable operational value.

OUR STAKE

Our Stake

We seek majority ownership or strong governance influence (including active minority structures with control-equivalent rights: board control, veto rights, reserved matters). Robust governance is a prerequisite to enforce strategic alignment and execute the operational change required for our ecosystem-building strategy.
