

Job Description for Equity Research Analyst

North Island Ventures is seeking an Equity Research Analyst to join our crypto hedge fund team. The Analyst's primary responsibilities include:

1. Surface and underwrite prospective crypto related public equity investments
2. Perform thematic research on emerging technology trends
3. Monitor existing positions

The essence of the role is to conduct in-depth research primarily on publicly listed crypto companies to surface, underwrite, and recommend prospective investments. The Analyst must be able to think critically about emerging technological innovations and their impact on our investible universe and have interest in crypto / blockchain technology.

We are fundamental thesis driven investors. We conduct in-depth independent research to surface and underwrite investments. We invest in public crypto assets including large to small market cap tokens, public equity of crypto related companies, and derivatives.

There will be an emphasis on communication skills, analytical abilities, investment instincts, and cultural fit. We work as a cohesive team and expect everybody at NIV to think like an owner, not an agent. While the first few months will involve hands-on training, the Analyst must be a self-starter and independent thinker who can operate with minimal supervision.

The candidate must live or be willing to relocate to NYC. We work from the office four days per week.

Requirements

- Critical thinking, deep curiosity, intellectual flexibility, and hard working
- Excellent written and verbal communication skills
- Demonstrated interest in and passion for crypto
- 2-5 years of full-time work experience
- Background in investment banking, consulting, or public markets investing is preferred

About North Island Ventures

North Island Ventures is a crypto-focused investment firm founded by Travis Scher, James Hutchins, and Glenn Hutchins. We manage \$500M+ across three funds.
