

NIV Software Engineer

North Island Ventures is hiring a Software Engineer to build out a bleeding edge AI investment stack. This software will help our team generate investment ideas, analyze them, and synthesize information prior to making investment decisions.

NIV engineering supports all facets of the investment process. We have three primary responsibilities:

1. Develop our proprietary NIV investment agent.
2. Maintain portfolio tracking tools to monitor our positions and streamline operations.
3. Support the investment team with data analysis and pipelines.

Your skillset:

- Operate independently with an ownership mentality: You will be expected to own your work end-to-end. You have built and maintained production systems. You will be operating in a low overhead environment with hands on support.
- Mastery of fundamentals: You should have deep knowledge of your preferred programming language, be comfortable with software engineering fundamentals and be able to apply your knowledge to a variety of problems. You will strive to be an [Expert Generalist](#).
- Strong verbal & written communication: We are a cross-functional team. You will need to explain our tech and your plans to other team members.
- Excited to work in investing and learn about the investment process.
- Live in or be willing to relocate to NY and work in our Union Square office 4 days per week.

Nice to have:

- Experience with AI coding tools.
- Experienced developing full stack applications in either Python or TypeScript.
- Prior experience at a startup, small team, or other environment with high ambiguity.
- Knowledge of data science and data engineering.

About North Island Ventures

North Island Ventures is a crypto-focused investment firm founded by Travis Scher, James Hutchins, and Glenn Hutchins. We manage \$500M+ across three funds.
