BICO INC. GRINDING PLATES

Bico grinding plates are available in a variety of materials and hardness to provide you with the best performance for your type of sample.

All plates (discs) are 8" in diameter and bear the Bico part number on the back side. A set of two (2) plates is required when running the machine: One stationary plate (with hole) located on the door, and one revolving plate located on the flange. New machines are factory supplied with the UA-51/52 Standard Iron Alloy Plates.

Proper installation and maintenance is very important to assure long wear and a fine grind. Perfect plate alignment is essential for optimum machine performance. The UA-1000 Plate aligner is available to assist you with this procedure.
