

Checkout Audit

Continuous monitoring. Complete peace of mind.

Protect the most important page on your website

Continuous monitoring and risk detection for ecommerce checkout environments

Your checkout is where every customer transaction happens. It is also one of the most attractive targets for cyber criminals. Checkout Audit provides continuous monitoring of your checkout environment so that suspicious activity, unauthorised changes, and emerging risks can be identified before they become a serious problem.

Simple to deploy. Continuous protection. Designed for retailers.

Trusted by Ecommerce Retailers

Checkout Audit is trusted by retailers who rely on their checkout to process customer payments every day.

Our monitoring platform has been developed specifically for ecommerce environments and is already protecting checkout journeys across a range of retail sectors.

Retailers across the UK and Ireland rely on Checkout Audit to monitor and protect their checkout environments.

About Checkout Audit

Checkout Audit is a security monitoring service built specifically for ecommerce retailers.

The platform has been developed by Venditan, a UK technology company that has been delivering ecommerce and retail software solutions to retailers across the UK and Ireland for more than two decades.

Having worked closely with retailers for many years, we understand that the checkout is the most commercially sensitive part of the entire online experience. Every transaction passes through it, and every customer relies on it to be secure.

Checkout Audit has been designed to provide continuous visibility into the checkout environment so that suspicious activity, unauthorised changes, and emerging cyber risks can be detected early.

The service focuses on practical protection for retailers, providing ongoing monitoring, clear reporting, and direct access to UK based cyber security specialists who understand the retail sector.

Why Retailers Choose Checkout Audit

-  Built specifically for ecommerce retailers.
-  Developed by a retail technology specialist with 20+ years' experience.
-  Continuous monitoring of checkout activity.
-  Clear reporting designed for business leaders.
-  Direct access to UK based cyber security specialists.

Your Checkout is a High Value Target

For ecommerce retailers, the checkout is the most commercially sensitive part of the entire website.

Every customer transaction passes through it, and every customer trusts it with their payment information.

Cyber criminals increasingly target checkout pages because they provide a direct route to valuable payment data.

By inserting malicious scripts or compromising third party components used within the checkout, attackers can capture payment information without interrupting transactions.

In many cases, these compromises remain undetected for extended periods.

Without continuous monitoring, businesses may have very little visibility into what is happening inside their checkout environment.

Checkout Audit helps identify suspicious behaviour early so that potential risks can be addressed before they become serious incidents.

Checkout Monitoring Provides Early Warning of:

Unauthorised changes to checkout scripts.

Suspicious third party activity.

New vulnerabilities affecting payment pages.

Indicators of potential compromise.

How Checkout Audit Protects Your Business

Checkout Audit provides continuous monitoring of your checkout environment so that suspicious activity can be detected quickly.

The service is designed to be simple to deploy and easy to understand, providing clear visibility without complex technical integration.

What's Included

Continuous checkout monitoring

Monitoring of checkout pages to detect suspicious activity or unauthorised changes.

Monthly security reporting

Clear reports summarising monitoring activity, findings, and recommended actions.

UK based cyber security support

Direct access to specialists who understand the risks facing ecommerce retailers.

Checkout Trust Mark

A visible trust mark displayed within the checkout confirming the most recent audit date.

The Checkout Audit Trust Mark

Checkout Audit provides a visible trust mark that can be displayed within your checkout environment.

This trust mark confirms that your checkout is being actively monitored.

This visible assurance demonstrates your commitment to protecting customer transactions.

How Checkout Audit Works

Protect your checkout in three simple steps.

1.

Checkout baseline review

We establish a baseline view of your checkout environment so that future changes can be identified.

2.

Continuous monitoring

Your checkout environment is monitored regularly to detect suspicious activity or vulnerabilities.

3.

Reporting and guidance

You receive monthly reporting and practical guidance to help address potential risks quickly.

Security should not be complicated

Checkout Audit provides continuous monitoring of your checkout environment without complex deployment or technical overhead.
