

THE SECURE TRANSMISSION

OF DOCUMENTS

LANTECH

The **GDPR** requires confidential communication channels for **sensitive personal data**. With the „**Document Secure Box**“, we offer you a solution with an **extremely high level of security**.

Now with emergency folder and automatic notification

Security

The uploaded files are securely stored in the database using cascaded AES encryption and made available to the recipient for retrieval. The documents are then available to the client in their password-protected access.

SyncBox

The optional SyncBox can be used to initiate the retrieval and sending of documents locally so that they do not have to be logged in again and again if they are used frequently during operation. These processes are also fully logged.

Allocation of rights

As the licensed operator of the DocSecBox, you can define which rights each user has for the respective files. Can they download, print or only read them. You decide what happens to your information.

Documents double-encrypted

Upload via drag & drop

Detailed rights management

Audit-proof filing

Encrypted retrieval from anywhere

Set document statuses

Connection via REST API possible

GDPR-compliant
