Digital sovereignty with georedundant data backup

Digital sovereignty refers to the ability of organizations to control data, processes, and digital tools in a self-determined, secure, and legally compliant manner. In the context of **collaboration services and file management**, this specifically means having control over storage locations, access rights, and data flows.

Secure collaboration solutions enable efficient collaboration without relinquishing control over **sensitive information** to third-party countries or non-transparent platform operators. Key aspects include data storage in trusted jurisdictions, transparent encryption strategies, clear role and permission models, and audit-proof logging.

In file management, **digital sovereignty** ensures that documents are managed in a structured, versioned, and secure manner. Companies retain control over data access, sharing, and lifecycles at all times, regardless of whether the systems are operated on-premises, in their own data center, or in a sovereign cloud.

Robust collaboration and file management services enable the seamless integration of **productivity, data protection, and compliance**—serving as the foundation for trustworthy, future-proof digital collaboration.

The **Federal Office for Information Security (BSI)** emphasizes that data sovereignty is a key prerequisite for **secure, trustworthy, and legally compliant IT** for all organizations, particularly those in the public sector. Government agencies must maintain control at all times over where data is stored, who is authorized to access it, and how it is processed.

By consistently prioritizing **data sovereignty**, businesses and the public sector strengthen their ability to act, enhance security, and build trust among partners, customers, suppliers, and, not least, citizens in digital administrative processes.

OVERVIEW OF FEATURES

☛ E-Mail System

All your essential tools in one place: Easily manage your inbox—send, reply to, and format messages, and share attachments with just a few clicks. Speed up your work with suggestions from ChatGPT or share emails directly in TeamChat rooms. Switch between apps and pick up right where you left off.

☛ Calendar

Keep track of all your meetings with an intuitive calendar. Organize your schedule, coordinate with colleagues, and manage events. With Booking, you can share your availability, invite participants, and let others book meetings in seconds—all through a modern user interface that ensures your day runs smoothly.

☛ Chat server

Chat in group or project rooms, share files, mention teammates, and pin important messages to keep everyone in the loop. Share emails in TeamChat and collaborate in a single thread—a solution that brings all team conversations together.

☛ Mobile devices

Easy integration of mobile devices via Active Sync for iOS and Android.

☛ Documents

Save files directly in LT Omni and access them from anywhere—via the web client, the mobile app, or synced with your desktop client for offline use. Easily share with individuals, groups, or guests.

☛ Office

Create, edit, and collaborate on documents in real time—fully compatible with official Microsoft formats (.docx, .xlsx, .pptx) as well as other common Office file formats. Track changes, chat within files, and speed up your work with ChatGPT suggestions. Your Office suite—designed for collaboration, efficiency, and cost savings.

☛ Desktop Client (Optional)

Stay organized and manage your emails, contacts, calendar, tasks, notes, chats, and meetings—all from your desktop. Enjoy secure communication with PGP encryption, a searchable message history, and a dark mode interface. Available for Windows or macOS.

☛ Conferences – Meet and interact in real time

Host meetings from your desktop or mobile device. Connect via video or audio, share your screen, record sessions, and invite up to 1,000 participants. Engage your audience with live chat, reactions, polls, and real-time document editing—or switch to webinar mode to present to a large audience with Q&A, live responses, and interactive polls.
