

BEFORE AND AFTER TED

ABOUT US

Led by Dr. Hannah Shehata, MHA provides top-tier medical care for women. Our goal is to help women be the best version of themselves inside and out.

Our office offers gynecologic care for women of all ages. However, we recognize that female sexual health concerns are often brushed aside, especially as women get older. Therefore, MHA specializes in treating women who are in menopause and/or going through the changes of menopause. Our office offers innovative treatments for urinary leakage, loss of sexual desire, decreased sexual sensitivity, and painful sex. We also offer hormone replacement therapy.

REVOLUTIONARY HAIR RESTORATION TREATMENT

Emphasizing Female Sexual Health

WWW.MHA4WOMEN.COM

HAIR LOSS? YOU ARE NOT ALONE!

- 17% of women experience hair loss
- 25% experience hair loss after menopause
- 98% of people with hair loss report that it affects their self-esteem

WHAT IS TED?

TED stands for trans-epidermal delivery system. It is a revolutionary, FDA-approved treatment for hair restoration.

WHY CHOOSE TED?

Until recently, a hair transplant was the only way to achieve effective hair restoration. Those days are now gone. TED is like nothing else available. It can reverse most types of hair loss as long as there are still hair roots present in the area. This ultrasound-based treatment is painless, non-invasive, and has a patient satisfaction rate of 90%.

HOW DOES TED WORK?

TED is the first hair restoration system to utilize low-frequency “acoustic” soundwaves and a high-pressure air system to provide a unique solution for hair loss. This amazing technology painlessly drives a specially formulated hair serum into the follicles to achieve the following:

- Promote blood flow to the scalp
- Improve the overall hair health
- Improve hair shine
- Improve hair thickness
- Awaken dormant hair follicles
- Anchor the hair you already have to reduce shedding

HOW IS TED DIFFERENT FROM PRP?

Anyone who is a candidate for PRP should consider TED. TED is FDA-approved, painless, and needle free. PRP treatments require you to have your blood drawn so it can be spun down to extract out the plasma layer. It is then injected into your scalp to (hopefully) promote hair growth.

PRP treatments are invasive, time-consuming, and painful. They are not FDA-approved and there are no clinical studies proving their effectiveness. Additionally, these injections cause trauma to the scalp, which can lead to bleeding and swelling. It also carries a risk of infection, scarring, and/or nerve damage.

WHAT SHOULD I EXPECT DURING MY TREATMENT ?

A single TED treatment takes about 45 minutes, but expect to spend about an hour in our office as we take before photos at every visit to help you track your progress. There are no needles or pain associated with the procedure. You will hear and feel the device vibrating, similar to an electric toothbrush. Some women also report that it feels like a massage and their scalp feels warm during the treatment.

Most people will need three TED treatments spaced a month apart and a fourth treatment six months later. There is minimal downtime and TED is 100% safe.

TED is clinically proven to reverse hair loss caused by:

- Stress
- Illness
- Scalp trauma
- Hormonal imbalance
- Damage from chemicals
