

**50** Corridor TMA + **Sac** TMA

# UPGRADE TO E-BIKE

STOP SWEATING. START RIDING MORE.  
WITH ELECTRIC ASSIST.

## HOW IT WORKS

- A battery mounted on the bike powers a small motor, offering assistance when you pedal
- Charge mounted on the bike powers a small motor, offering assistance when you pedal.
- Current ebikes achieve a range between 20 and 100 miles on a single charge.
- Set the level of assist from low to high, depending on your preference, needs, and desired battery range.

**Most popular ebikes cost between \$600 and \$4,000.**

**To learn more, check out your local bike shop.**
