

# Faster trials with real-time patient data from interested sites

*Driving planning, selection, and enrollment.*

Inato connects you with interested sites worldwide who have proven patient access, so you can accelerate drug development and bring care to the patients who need it most.

## How it Works

### 1 Publish Your Trial

Post the high-level details of your trial and survey sites to gain early protocol design feedback and get early signals of site interest and patient access details.

### 2 Comprehensive Trial Applications

Once selection opens, interested sites submit comprehensive profiles outlining the full scope of their capabilities, experience, past performance, diversity breakdown, and proven patient access data.

### 4 Visible Site Performance

Selected sites use our AI patient pre-screening to drive faster enrollment and increased visibility. Your sponsor dashboard provides real-time insights into prescreening rates, fail reasons, and site activity.

### 3 Recommended Sites

Our platform provides you with a comprehensive overview of the site highlights, capabilities, and considerations. Use our AI Analyst to find the best mix of sites based on your trial goals.

## TOP THERAPEUTIC AREAS ON OUR PLATFORM

### Broaden Your Trial's Reach

Expand the pool of patients engaged in your trials when you confidently partner with sites on the Inato platform. Based in communities across the globe, sites on our platform have the motivation, experience, and proven patient access to deliver results in your trial.
