

Weight Loss Study with AI Pre-Screening

Background

In a competitive weight-loss study where rapid enrollment was critical, Pantheon Clinical Research used Inato's AI Patient Pre-Screening to reduce manual medical record review. This allowed their site the speed and accuracy needed to outpace competitors while maintaining high eligibility accuracy and data quality.

Records Reviewed Per Hour

Reviewing 62 records traditionally takes an estimated 186 CRC hours. With Inato, that same review was completed in just over 5 hours, at approximately 5 minutes per record.

181

hours saved reviewing patient records in a single trial

The time savings from using Inato was equivalent to

4.5 weeks

of manual work

\$4,521

Direct CRC labor savings using Inato

97.5%

Screening success rate
