

Phase III Atopic Dermatitis

Study Basics

- **Disease:** Atopic Dermatitis
- **Phase:** III
- **Target Geography:** Global

Background

A sponsor faced significant enrollment hurdles in a complex atopic dermatitis trial. With adult enrollment halted mid-study, recruiting pediatric patients became even more difficult.

Impact

The sponsor partnered with Inato to provide motivated, community-based sites that had access to more patients. Soon after partnering with Inato, new sites were activated and began quickly screening patients.

ONE SITE SCREENED PATIENTS WITHIN

14 days

OF ACTIVATION

AND

ENROLLED

25%

OF **ALL PATIENTS** ACROSS THE STUDY

Inato achieved

123%

of its patient enrollment commitment

38%

PATIENTS ENROLLED THAT WERE DIVERSE

allowing for a more representative trial
