

EARLY ACCESS OPPORTUNITIES

Stand out to sponsors, *before a trial goes live.*

Early Access Opportunities are pre-trial windows where sponsors are actively planning their next study, before the trial opens for selection. Sites that **connect their patient data** and raise their hand on an Early Access Opportunity show up first to the sponsors — with verified patient evidence of who they can enroll.

THE DIFFERENCE IS YOUR DATA

 **Connect data**
Verified patients → **seen first**

 **Decline**
Estimates → standard queue

RECOMMENDED

CONNECT PATIENT DATA

Increase your chance of getting selected

Connect your EHR or CTMS once. Inato verifies your patient access against the protocol and surfaces your site to the sponsor before selection opens — with real patients, not estimates.

WHAT YOU GET

- ✓ Placement with the sponsor **before the trial opens broadly**
- ✓ Verified patient access shown to the sponsor, a **stronger signal than self-report**
- ✓ One connection covers **every future Early Access Opportunity**
- ✓ The same connection also accelerates pre-screening on **trials you're already running**

DECLINE DATA SHARE

Standard application once the trial is live

You can still apply once the Early Access Opportunity becomes an active trial — just like any other study on Inato.

WHAT YOU GET

- Standard application flow with self-reported patient counts
- You can opt in to share data later

Without connected data, sponsors only see estimates and your site waits for the standard selection window.
