

Expanded patient access to *drive progress* towards your diversity goals.

95%

of active sites are community & non-academic centers

6,400+

activated community sites across our platform

99%

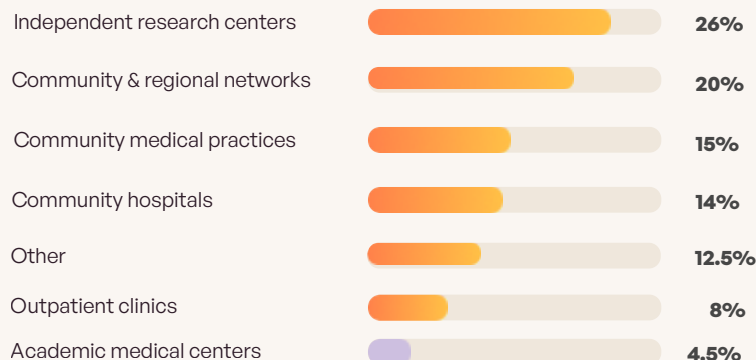

of sites that report patient demographics say they reach a diverse patient population.

78

countries & all 50 U.S. states — deep into underserved geographies

A network built on **community sites**

Fewer than 5% of Inato's active sites are academic medical centers. The overwhelming majority are community practices, independent research centers, and regional hospitals that sit closest to underserved patients.

Direct access to **underrepresented patients**

Sites report the demographics of the patients they can reach, so diversity can be targeted up front. Across sites that report this data:

43%

of sites on the Inato platform have access to Black /African American patients

42%

of sites on the Inato platform have access to Hispanic / Latino patients

1,000+

sites have ≥25% of reachable patients that are Black / African American

1,050+

sites where a majority are from underrepresented groups

How sponsors can use Inato for community & underserved enrollment

- 01 Target sites by patient demographics.** Select for Black, Hispanic/Latino, rural and underserved populations up front to support diversity goals.
- 02 Activate community sites fast.** Reach 6,400+ non-academic sites ready to run industry trials.
- 03 Go where patients live.** Coverage across 78 countries and all 50 U.S. states to extend trials into underserved geographies.
- 04 Lower the access barrier.** 970+ sites offer accessibility adaptations and 1,000+ have multilingual teams — reducing dropout for underserved patients.
