

The **Site Network** Experience on Inato

Inato's Site Network Experience is built for multi-location research organizations that want centralized oversight, clearer visibility into patient access, and streamlined trial coordination across all their sites.

By integrating EHR data across your network, you unlock real-time insights that support both feasibility and enrollment — while giving your team structured roles and visibility across locations.

Who is this for?

- **New site networks** joining Inato
- **Existing site networks** currently operating as separate sites and looking to centralize

How it works:

- 1 Connect with Inato**
Reach out to our Customer Success team to begin your network setup.
- 2 Define Your Network Structure**
for Inato to set up the right experience and site locations within your network
- 3 Integrate EHR Systems (Required)**
Each site location must have an EHR integration to access the network experience.
- 4 Assign Roles & Access Levels**
This ensures seamless coordination and visibility across all locations.

Because every network is structured differently, onboarding is handled in close collaboration with our team.
