

# Providence Institute for Clinical Innovation

Turning bold ideas into everyday care.

## The Power of Philanthropy

Transforming healthcare takes bold ideas and people who believe in what's possible.

At Providence, we are reimagining the future of healthcare.

We connect world-class researchers, care teams, and communities together to bring the next generation of care to all patients, everywhere.

Your support can help us:

Accelerate innovation that changes how care is delivered.

Reduce discovery time enabling our experts to focus on high-impact work.

Ensures real-time responsiveness to the evolving needs and barriers of patients and communities.

## Together, we can transform healthcare

Every dollar fuels research and solutions that directly impact lives across Providence communities, and beyond. Together, we can make care more effective, equitable, and personal for all.

Your partnership fuels discovery, innovation, and hope — bringing the future of medicine to patients today.

"We always strive to deliver the best care to our patients, but philanthropic support is uniquely transformative – it fuels our breakthroughs and helps us turn today's most innovative ideas into tomorrow's new and improved standard of care."

**Kristin Brown**

Executive Director, Providence Institute  
for Clinical Innovation

## Your Gift in Action

Your generosity can drive innovation that changes lives today and for generations to come. These examples illustrate how different levels of support create real-world impact.

### Bringing World-Class Care to Rural Communities

\$100,000

Help us redefine rural health by co-designing innovative new care models alongside rural providers and patients. Your gift supports programs that bring cutting-edge advancements closer to home, so patients don't have to travel far for world-class care.

### Advancing Breakthrough Technologies

\$250,000

Join us in partnering with world-class innovators and startups ready to deliver transformative solutions to patients. Your support helps scale real-world pilot projects like CardioScope AI, which uses AI to help stop heart attacks before they happen.

### Improving Population Health for All

\$500,000

Fuel our research into Real World Evidence (RWE) and population health initiatives. Your donation helps us uncover insights that improve outcomes systemwide like our AFib NEXT project, which revealed barriers to treatment adherence to atrial fibrillation patients and informed innovative new approaches for addressing those barriers.

### Expanding Access to Clinical Trials

\$1 Million

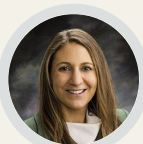

Help bring hope and potential lifesaving treatments to patients who have exhausted standard care options. Your gift supports technology that makes clinical trial access faster, easier, and more equitable ensuring patients and physicians can find the right match when time matters most. For example, we are using AI to automate the matching of patients to clinical trials, allowing us to take the right study directly to a patient and reduce the work and the worry of searching for clinical trials when standard therapies haven't worked.

## Innovation Endowments: Leave a Legacy of Impact

Although our research continues to fuel innovation, diseases are always evolving. We need to stay ahead of the curve, and to ensure real change, we need to avoid playing catch-up. You can help us create an enduring legacy by funding Precision Medicine and Whole-Person Care programs that help us lead life changing transformation. Your endowment can power:

- **Risk Awareness Programs** for early detection and disease prevention.
- **Precision Insight Programs** that tailor treatments based on genetics and environment.
- **AI and Data Solutions** to bring personalized cancer care to every patient.
