The Agentic Cloud Defender

Prowler is the Agentic Cloud Defender for any cloud. We help organizations continuously secure cloud infrastructure, SaaS, containers, and Infrastructure as Code across multi-cloud environments. Built on an open-source foundation, Prowler combines deterministic security checks, compliance mappings, and AI-driven investigation, prioritization, and guided remediation to reduce risk faster while keeping teams in control.

World's Most Widely Adopted Open Cloud Security Platform

46M+ Downloads	**14K+** GitHub Stars	**310+** Contributors Worldwide
2,000+ Checks	**60+** Compliance Frameworks	**20+** Cloud Providers

Prowler OSS: Free, self-managed

CLI scanner, Local Server, and SDK.

`github.com/prowler-cloud`

Prowler Cloud: Managed & Agentic · $99 per scanned account/month

Everything in OSS, plus Lighthouse AI + MCP server, custom dashboards and reporting, Autonomous Engineer for remediation, Real-time Detection, and Alerts and notifications.

Prowler Private Cloud: In your cloud (VPC) or on-prem

Everything in Cloud, plus air-gapped deployment, data residency of choice, private providers/checks/compliance, Local Registry, and white-glove onboarding.

Prowler for MSSPs: Partners

Managed platform for MSPs, MSSPs, and resellers with multi-customer management, centralized billing, and immediate remediation plans.

TRUSTED BY INNOVATIVE CLOUD SECURITY LEADERS

Key Capabilities

Lighthouse AI

An autonomous virtual Gen-AI assistant built with Agentic AI tools presents a chat interface, enabling users to ask complex operational or analytical questions as if they were talking to a colleague.

Prowler MCP

Brings cloud security context within agentic workflows by integrating with popular tools such as Cursor, Claude Code, or Visual Studio. Prowler MCP detects misconfigurations, assesses risk, and can automatically generate or submit remediation pull requests, all without leaving the coding environment.

Prowler Hub

The registry at the center of the agentic cloud security universe. 2,000+ open, versioned artifacts (detections, remediations, and compliance packs) consumable by humans and by every AI security agent through MCP.

Attack Paths

Unified Knowledge Graph maps all cloud resources with the relationships that link them. Prowler turns cloud complexity into clear risk paths, enabling teams to understand, prioritize, and eliminate real-world attack routes.

Compliance and Audits

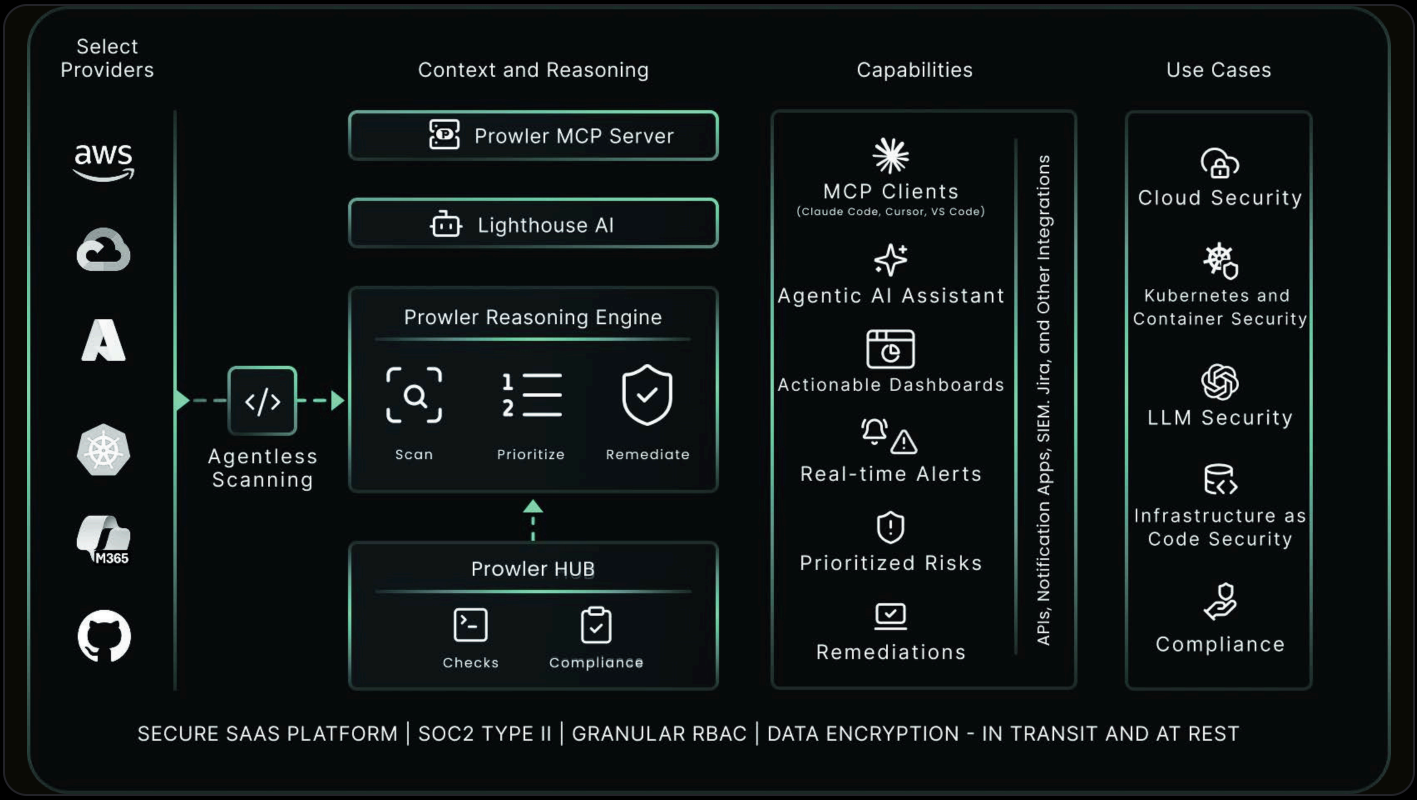
Easily demonstrate adherence to industry and regulatory standards with automatic mapping against compliance framework requirements.

Infrastructure as Code Security

Shift security left and catch misconfigurations, policy violations, and risks in code and CI/CD pipelines before resources are provisioned.

Prowler ThreatScore

Weighted risk prioritization scoring that helps you focus on the most critical security findings first.



Multi-cloud coverage:	AWS · Microsoft Azure · Google Cloud · Kubernetes · GitHub · Microsoft 365 · Oracle Cloud (OCI) · Alibaba Cloud · Cloudflare · OpenStack · Vercel · Okta · Google Workspace · MongoDB Atlas · IaC · LLM
