CAP
ACCREDITED
COLLEGE of AMERICAN PATHOLOGISTS

OncoTwin finds the most similar real-world patients ("twins") using clinico-genomic similarity and network algorithms—then summarizes treatment journeys and observed outcomes with transparent rationale.

Transparent Match Drivers

Consistent Scoring

Observational Evidence

Three Pillars for Clinical Insights

OncoTwin augments the oncologist's decision-making by bringing the collective experience of thousands of molecularly similar cancer patients to every treatment decision. It combines patient matching, real-world outcomes, and AI-driven insights to support precision oncology care.

SIMILARITY MATCHING

Weighted clinical and genomic similarity with auditable match drivers and confidence scoring.

NETWORK INTELLIGENCE

Graph-based methods reduce one-off matches by surfacing clusters of biologically related cases.

PEER EVIDENCE (STATISTICS)

Cohort-level outcomes among similar patients (n), including durability, early failure, and treatment response trends.

AI-Powered Clinical Decision Support

Experience the future of evidence-backed oncology. OncoTwin helps oncologists move beyond static reports by matching each patient's genomic and clinical profile to thousands of global outcomes, delivering evidence-backed treatment options in real time.

Real-World Outcome Intelligence

AI trained on diverse global datasets to provide treatment paths supported by real patient outcomes.

Digital Twin Patient Models

A virtual model of each patient that predicts response patterns and simulates therapy options.

Personalized Therapy Recommendations

Insights tailored to genomic alterations, biomarkers, comorbidities, and treatment history.

Adaptive Evidence Engine

Continuously updated insights incorporating the latest studies, guidelines, and real-world data.

The Twin Report

Making clinical research faster, sharper, and more patient-aligned.

A structured, analytically rigorous patient similarity report designed for clinical interpretability and reproducibility.

A structured, analytically rigorous patient similarity report designed for clinical interpretability and reproducibility

Comparative treatment trajectories, including lines of therapy, treatment duration, and progression-related signals

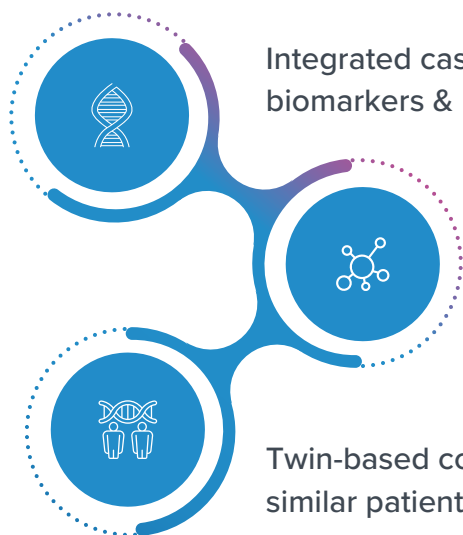

Peer evidence summary, presenting outcome rates with corresponding cohort size and statistical confidence indicators

Risk and limitation annotations, highlighting data sparsity, potential confounding factors, and completeness considerations

Molecular Tumour Board Enablement

A structured, data-integrated workspace designed to support multidisciplinary molecular tumour board discussions through unified, evidence-contextualized case review.

Integrated case view consolidating genomic findings, clinical history, biomarkers & prior treatments in a single standardized format

Evidence contextualization layer linking molecular alterations to guidelines, literature, and real-world cohort signals

Twin-based cohort insights providing outcome context from clinically similar patients without prescriptive inference

Experience the future of evidence-backed oncology.

OncoTwin matches every patient profile to global outcomes, delivering real-time clinical intelligence.

**Transform data
into outcomes.**

Trust & Guardrails: A structured, data-integrated workspace

While OncoTwin is an ideal platform for the oncologists to take decisions based on real world evidence, the same can be extended for Pharma companies with actionable intelligence across prescription behaviour, account strategy, patient engagement, and study execution.

Virtual Control Arm

Biomarker Validation

Clinical Trial Optimization

Evidence Backed Treatment Insights

Revolutionising Care, Personalising Hope Globally

With Precision Oncology, we're not just treating cancer.
We're redefining what's possible in Cancer care.

Together, **We Beat** Cancer
