

Privacy Was Never Designed for AI. Singulr Makes It Enforceable.

Enforce data protection at the prompt, the model, the agent, and the workflow. Not just at the policy.

The AI Privacy Reality in 2026

3-5x

Shadow AI is 3-5x more prevalent than most organizations report, much of it touching PII, PHI, or regulated data.

87%

Of AI services embed default-on features that process user data without explicit governance review.

0

Number of legacy DLP tools designed to enforce policy on prompts, embeddings, agent calls, or cross-system AI workflows.

How Singulr Operationalizes Privacy for AI

1. **Continuous AI discovery** across third-party tools, in-house apps, embedded SaaS features, MCP servers, and personal accounts, with every sensitive data flow mapped to user, department, and purpose.
2. **Account-level enforcement** that distinguishes personal from enterprise accounts and blocks unsanctioned data movement in real time.
3. **Transformation-aware governance** that treats embeddings, summarizations, inferences, and agentic execution outputs as governance events, not just data movement.
4. **Vendor and subprocessor intelligence** through **Singulr Pulse™**, including training practices, data retention terms, and model fine-tuning posture for thousands of AI services.
5. **Independent, tamper-evident proof** that controls operated as intended, generated continuously across every AI interaction, not assembled after the fact.
6. **Regulatory frameworks Singulr supports:** GDPR | HIPAA | EU AI Act | NIST AI RMF | SOC 2 | ISO 27001 | ISO 42001 | State privacy laws (CCPA/CPRA and equivalents)

About Singulr AI:

Founded in Palo Alto, California, Singulr is the Enterprise AI and Agentic Control Plane™ for the modern enterprise. The platform enforces data protection at the prompt, the model, the agent, and the workflow, not just at the policy, treating every AI interaction, transformation, and agentic output as a governance event.

Enterprise Privacy, Compliance, and Risk teams can now demonstrate enforceable, audit-ready control across GDPR, HIPAA, the EU AI Act, and NIST AI RMF, all powered by Singulr Pulse™, the industry's leading AI risk intelligence system.

Questions Privacy Leaders Can't Answer With Today's Tools

1. Where is PII, PHI, or regulated data flowing into AI services we never approved?
2. Are employees using personal accounts to process customer data through AI tools?
3. When an AI agent transforms sensitive data into an inference, who owns the resulting risk?
4. Are we training someone else's foundation model with our customers' data?
5. Can we prove to a regulator that our privacy controls were actually enforced, not just documented?
6. Can we demonstrate compliance across GDPR, HIPAA, and the EU AI Act with a single source of truth?

We Put You In Control Of AI™
