Smart Pilot View Kit For significantly enhanced pilot view with original RH pilot door

The Smart Pilot View Kit significantly improves pilot visibility and operational safety!

KEY FACTS The Smart Pilot View Kit provides the maximum possible pilot visibility while retaining the original pilot door. A large lower viewing aperture and transparent fuselage window fairing significantly increases the vertical field of view forward, aft and directly underneath the aircraft. The SPVK comprehensively improves the capability and safety to perform demanding operations such as firefighting, law enforcement, SAR/EMS, powerline survey, sling loading, spraying, confined area operations, aerial survey, seismic, law enforcement and any other tasks performed in close proximity to terrain, obstacles and ground crews or when operating at remote landing sites. The complete kit includes all required parts and fasteners, divided into four main assembly groups: two lower cowling (belly and rear), an aluminium reinforcement frame, a stepping board, and the transponder relocation parts. The customer only needs to provide tools and man-hours for the installation.

H125 / AS350 «ECUREUIL»/«SQUIRREL» IS TO DATE THE MOST SUCCESSFUL SINGLE ENGINE, MULTI-PURPOSE HELICOPTER

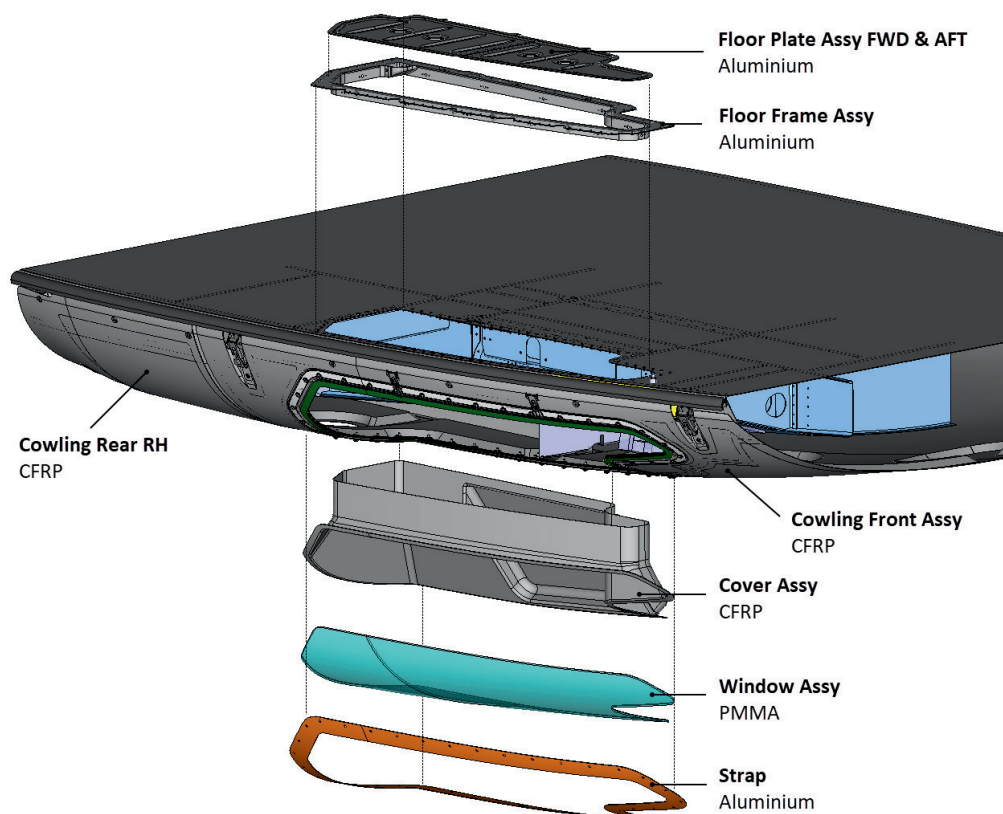

- «Ecoreuil / Squirrel» has the best performance in its class.
- However, the vertical visibility for the pilot is insufficient, which proves to be a critical factor for demanding operations.

THE SMART PILOT VIEW KIT INCREASES THE PILOT'S VERTICAL VIEW

- Technically largest possible view while retaining the original pilot door to all mission sectors.
- Better view allows for safer and more efficient operations.
- More view –higher Pilot comfort and safety.

ADVANTAGES ARE SIGNIFICANT

- Enhanced operational safety.
- Improved efficiency – higher operator and customer satisfaction.
- Less pilot fatigue.

*The Window Assembly, Strap, and Cowling Front Assembly will be delivered as a single unit.

Plug and Play solution Smart retrofit with new cowlings

COSTS ARE COMPELLING

- Invest 1.5% additional to a new H125 and receive several times more safety through higher visibility.
- Investment will retain its value and be paid back when selling the helicopter.
- No disadvantage at any operations.

PROBLEM

Pilot visibility is a key factor during demanding helicopter operations (fire fighting, sling operation, law enforcement, military etc.). The standard field of view in the H125/AS350 is insufficient for such operations.

SOLUTION

The Smart Pilot View Kit provides significantly increased pilot view to the most important mission sectors vertical down by:

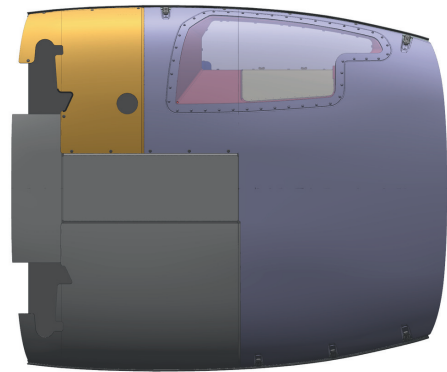

- Enlargement of the cabin floor window to more than twice the size of the existing (Dart/Airbus) floor windows.
- Improving visibility vertical down.

DE-MODIFICATION KIT

The De-Modification Kit is available to revert the rotorcraft to a standard AS350/H125.

TWO NEW COWLINGS

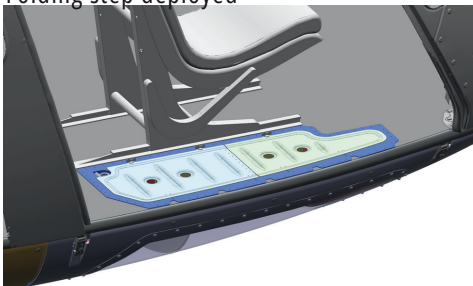

- Both cowlings are part of the SPVK kit and can optionally be supplied in the customer's base color.

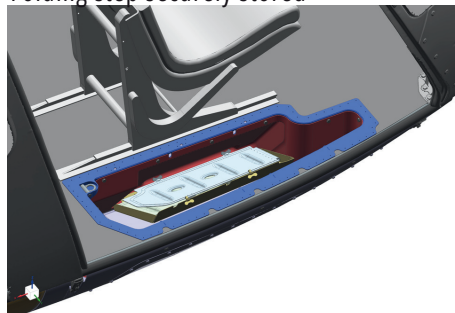

APPROVALS, INSTALLATION & MAINTENANCE

- EASA STC approved since October 2025
- Further validation requested by FAA, TCCA, DGAC Mexico, ANAC Brazil and CAAC China.
- The modification will be delivered with a Form 1, applicable to H125/AS350 versions B2/B3.
- Certification requirements for the installation will be provided with the kit.
- Installation can be performed by any capable Part 145 Organisation or Swiss Rotor Services can offer a mobile team to install the SPVK.
- Installation effort will require approximately 24 man-hours – depending on MOD status and configuration of helicopter.
- No out of phase maintenance for SPVK is required.
