We're excited to share a series of powerful updates designed to make your daily workflow smoother, faster, and more intuitive. Many of these enhancements come directly from your feedback — thank you for continuing to help us shape the platform.

📍 Website Forms Now Support Location Pin Mapping

When completing **mobile forms on the website**, you'll now see a **locator pin with an integrated map**, just like on the mobile app. Select any point on the map, and the **address auto-fills directly into the form fields**—saving time, reducing typos, and improving accuracy.

📊 Full-Screen Mode for Analytics & Open Issues

Collapsing the side menu using the **hamburger icon** now gives you **true full-page mode**. This is especially helpful when viewing:

- The new **Observation Analytics** dashboard
- The **Open Issues** page
- New analytics pages being released over the next few months

More space = clearer insights = faster decision-making.

🔍 Instant Search on Every Page

Another small but meaningful improvement:
Whenever you load a new page on the client website, your **cursor automatically starts in the search box**. No extra clicks.
Just type and go.
These little quality-of-life updates add up to a noticeably smoother and streamlined experience.

📒 New File Cabinet Page + Smart File Downloads

You'll also notice a brand-new **File Cabinet page**, which now includes:

- **Downloadable QR codes** for each file
- Over **10 different areas of the website** now use **intelligent file naming**, making downloaded files far easier to identify and organize

⭐ Set Your Own Landing Page

You will be able to personalize your workflow by choosing which page loads first when you sign in.
How to set your custom landing page:

1. Navigate to the page you want as your default.
2. Click the **star icon** in the top-right corner next to your name in the side menu.
3. That's it — from now on, you'll land on that page at login.

Super simple, incredibly useful.

🌀 "Select All" Button Now Pulsates While Loading

On many pages, you'll now see an animated ("pulsing") **Select All** button during loading.
This gives you a clear indicator that:

- The page is still loading
- "Select All" isn't usable yet

Just another small improvement that makes a big difference in clarity.

🙏 Thank You — Keep the Suggestions Coming

Every one of these improvements was shaped by client feedback.
We appreciate your ongoing support and collaboration — and we're excited for what's coming **next month (more analytics and AI)**.
If you have recommendations, ideas, or new feature requests, please keep them coming. You help make the platform stronger for everyone.
