

# AQUACULTURE SOLUTIONS

## Why

Sustainable aquaculture plays a vital role in meeting the growing demand for seafood, supporting food security, and reducing pressure on wild fish stocks

## What We Offer

### 1. Project Management

- Supporting new aquaculture ventures and expansions through site selection, construction oversight, and operational planning.
- Assisting with compliance, environmental impact assessments, and implementation of industry best practices.
- Delivering professional advice on farming practices, farm management, and sustainable production strategies.

### 2. Feasibility Studies

- Delivering high quality, comprehensive assessments that evaluate the economic viability and practical implementation of aquaculture projects, helping clients make informed investment decisions.

### 3. Water Quality Management

- Offer water quality testing & monitoring services.
- Provide advice on optimizing water parameters for optimal growth and health of aquatic species

### 4. Training and Workshops

- Conducting capacity building programs for researchers, students, and farmers focused on aquaculture techniques, biosecurity measures, and sustainable practices.

### 5. Research and Development

- Engage in research projects to develop new aquaculture technologies
- Collaborate with universities and research institutions to advance knowledge in aquaculture.
