## REPORT SUMMARY

### *Introduction*

Disability Service Provider Network (DSPN) Roadside Facilities (RF) maintains a comprehensive database of roadside facility traffic counts and water usage as part of their program management services for the Wisconsin Department of Transportation Roadside Facilities Maintenance Program. The data collected is used for various purposes including comparing traffic volume to site maintenance costs, adjusting work schedules to accommodate site use, analyzing budgets, and evaluating facility construction needs.

The water meter readings form was added to FAMIS in June 2020. A monthly work order is sent out to assigned service providers as a reminder to enter water meter readings for the month.

The coronavirus had an impact on water usage and highway traffic as travel was reduced due to the pandemic. Rest areas experienced a decrease in water usage and traffic volume due to COVID-19 pandemic.

This report is organized into the following sections:

**Water Comparison Report: 2020/2019/2018/2017**  
**Traffic Comparison Report: 2020/2019/2018/2017**  
**Traffic vs. FY 2020 Budget Report**  
**Traffic Count/Water Usage by County Summary**

### *"Water Comparison Report" Summary*

The "Water Comparison Report" shows the average water usage per month for each year-round rest area site from 2017 to 2020. Overall, water usage for 2020 averaged 52,219 gallons per month per site. This is 13.70% less than 2019, which averaged 60,509 per month per site.

#### No Water Meter Readings for the following sites in CY 2020:

- ❖ Rest Area 15 Bangor in LaCrosse County was closed permanently October 2019.
- ❖ Wayside 4 Lake Shore in Manitowoc County was transferred to city.

### *"Traffic Comparison Report" Summary*

The "Traffic Comparison Report" compares the Average Daily Traffic (ADT) for Calendar Years 2017 through 2020 for sites with permanent traffic counters (only located at year-round facilities). The average daily traffic in 2020 was 540 cars per-site per-day or an average of 1,350 people per-site per-day. The ADT in 2020 was lower than 2019 by 18.93%.

#### The following rest areas were closed due to Interstate construction:

- ❖ Rest Area 22 Beloit in Rock County was closed August through October due to construction.
- ❖ Rest Area 17 Janesville in Rock County was closed for February through May due to Highway construction. No data was collected in December 2019 due to traffic counter issues.

### ***"Traffic vs. Budget Cost Comparison Report" Summary***

This report covers the period of December 2019 through November 2020. Compared are the Average Daily Traffic vehicle totals and concurrent budget expenditures for all ongoing operational activities by crews and services provided by outside vendors. In any given year, expenses will vary at rest area sites due to budget savings on one or more line items or higher expenditures due to unforeseen needs such as well pressure tank replacements, faucet replacements, furnace failures, valve replacements, etc.

The comparison report features two sections: one sorted by traffic volume (ADT) and one sorted by budget/operational costs reflecting the per vehicle cost. Traffic data anomalies are footnoted at the bottom of the report using key symbols for reference.

### ***"Traffic Count/Water Usage by County Report" Summary***

The attached "Traffic Count / Water Usage" report is organized by county, then by site. Each site section lists traffic counts and water data (if applicable) and amenities. The report includes traffic or water notes if pertinent. Occasional problems with the traffic counter equipment is noted; frequent equipment problems may cause the data to be distorted and may help to explain why the traffic may be somewhat higher or lower than the previous month.

The data categories represent:

**CombADT** – the average daily number of cars and trucks counted at continuously counted sites (Note: no car or truck individual counts were taken in 2017, 2018, 2019 and 2020).

**Total ADT** – the average daily count of both cars and trucks at all counted sites.

**Monthly H2O Usage** – the total number of gallons of water used during the month.

**Notes** - Notes indicate if there were any problems with the equipment and when the traffic counter was down; or any well notes included on the water meter reading sheets.

WisDOT discontinued forwarding data from the Continuous Mainline traffic counters in CY 2012. DSPN RF had received data from only a few selected Continuous Mainline counters in previous years.

### ***Data Management***

The Traffic Data is processed using SQL database software. Information for each site is entered into one database file then linked to the data file. Reports are produced grouped by county, listing site information and specific traffic data.

The WisDOT Information Technology and Management Section forwards traffic data reports to DSPN RF monthly. The monthly reports include permanently counted sites including year-round sites. The monthly average daily traffic (MADT) figure is entered for permanent counter sites. WisDOT's traffic count year begins in December and ends November of the following year.

Water use is recorded daily at all year-round roadside facilities by the site maintenance personnel. The majority of the facilities' water meters register water use in gallons, while others register the use in cubic feet. All report data is converted and entered in gallon quantities. Monthly water reading are entered in FAMIS.

FAMIS is a cloud-based property and asset management system. (*Accruent is the company that owns the FAMIS software. WisDOT Roadside Facilities subscribes to the system.*) Historical

data, documents and records are maintained in FAMIS and accessible for program and budgetary planning purposes by WisDOT, DSPN RF and Service Providers.

### ***Analytical Data Reports***

The traffic data has been useful to Roadside Facilities program managers in evaluating site maintenance funding needs. The traffic counts provide a general comparison for evaluating budgets as well as specific data on hourly and daily traffic variations used to develop maintenance crew work schedules at the roadside facilities. DSPN RF has developed a comparison chart of traffic counts versus site budgeted figures. This has proved useful when negotiating levels of service and budgets for maintenance service provider contracts.

## Rest Area Maintenance Program CY 2020 Traffic and FY 2020 Budget Cost Comparison

Report Information: The Operating CCLM (Custodial Care and Landscape Maintenance) services by the maintenance service provider Budget for paired sites (i.e. RA 11 & RA 12) is shown with an equal split for the December 2019-November 2020 Period (CY2020). Paired sites have an operational advantage because they are close in proximity to each other and thus may gain certain efficiencies in personnel and equipment over those serving as a single site. The Operating Budget also includes Special Vendor Service costs for trash, plumbing, electrical, HVAC, septic, well services, etc. and are noted as per the range of these costs below; these costs are dependent on each site's mechanical systems. This report shall be used as a reference tool.
