REPORT SUMMARY

Introduction

Disability Service Provider Network (DSPN) Roadside Facilities (RF) maintains a comprehensive database of roadside facility traffic counts and water usage as part of their program management services for the Wisconsin Department of Transportation Rest Area Maintenance Program. The data collected is used for various purposes including comparing traffic volume to site maintenance costs, adjusting work schedules to accommodate site use, analyzing budgets, and evaluating facility construction needs.

The water meter readings form was added to FAMIS in June 2020. A monthly work order is sent out to assigned service providers as a reminder to enter water meter readings for the month. Hwy traffic data was added to FAMIS January 2021.

The coronavirus had an impact on water usage at rest areas and highway traffic in CY 2020 as travel was reduced due to the pandemic. CY 2021, water usage and highway traffic volume returned to near pre-pandemic numbers.

This report is organized into the following sections:

Water Comparison Report: 2021/2020/2019/2018
Traffic Comparison Report: 2021/2020/2019/2018
Traffic vs. FY 2021 Budget Report
Traffic Count/Water Usage by County Summary

"Water Comparison Report" Summary

The "Water Comparison Report" shows the average water usage per month for each year-round rest area site for calendar years 2018 to 2021. Overall, water usage for 2021 averaged 66,568 gallons per month per site. This is 27.48% more than 2020, which averaged 52,219 per month per site.

Note: 2020 was the first year of the pandemic and rest area usage was greatly decreased.

"Traffic Comparison Report" Summary

The "Traffic Comparison Report" compares the Average Daily Traffic (ADT) for calendar years 2018 through 2021 for sites with permanent traffic counters (only located at year-round facilities). The average daily traffic in 2021 was 661 cars per-site per-day or an average of 1,652 people per-site per-day. The ADT in 2021 was higher than 2020 by 22.52%.

Note: 2020 was the first year of the pandemic and rest area usage was greatly decreased.

Traffic vs. Budget Cost Comparison Report Summary

This report covers the period of December 2020 through November 2021. Compared are the Average Daily Traffic vehicle totals and concurrent budget expenditures for all ongoing operational activities by crews and services provided by outside vendors. In any given year, expenses will vary at rest area sites due to budget savings on one or more line items or higher expenditures due to unforeseen needs such as well pressure tank replacements, faucet replacements, furnace failures, valve replacements, etc.

The comparison report features two sections: one sorted by traffic volume (ADT) and one sorted by budget/operational costs reflecting the per vehicle cost. Traffic data anomalies are footnoted at the bottom of the report using key symbols for reference.

"Traffic Count/Water Usage by County Report" Summary

The attached "Traffic Count / Water Usage" report is organized by county, then by site. Each site section lists traffic counts and water data (if applicable) and amenities. The report includes traffic or water notes if pertinent. Occasional problems with the traffic counter equipment is noted; frequent equipment problems may cause the data to be distorted and may help to explain why the traffic data may be somewhat higher or lower than the previous month.

The data categories represent:

CombADT – the average daily number of cars and trucks counted at continuously counted sites (Note: no car or truck individual counts were taken in 2018, 2019, 2020 and 2021).

Total ADT – the average daily count of both cars and trucks at all counted sites.

Monthly H2O Usage – the total number of gallons of water used during the month.

Notes - Notes indicate if there were any problems with the equipment and when the traffic counter was down; or any well notes included on the water meter reading sheets.

WisDOT discontinued forwarding data from the Continuous Mainline traffic counters in CY 2012. DSPN RF had received data from only a few selected Continuous Mainline counters in previous years.

Data Management

The Traffic Data in CY 2021 was processed using SQL database software. Information for each site is entered into one database file then linked to the data file. Reports are produced grouped by county, listing site information and specific traffic data.

The WisDOT Information Technology and Management Section forwards traffic data reports to DSPN RF monthly. The monthly reports include permanently counted sites including year-round sites. The monthly average daily traffic (MADT) figure is entered for permanent counter sites. WisDOT's traffic count year begins in December and ends November of the following year.

Water use is recorded daily at all year-round roadside facilities by the site maintenance personnel. The majority of the facilities' water meters register water use in gallons, while others register the use in cubic feet. All report data is converted and entered in gallon quantities. Monthly water reading are entered into FAMIS (WisDOT's asset and facilities management system).

FAMIS is a cloud-based property and asset management system. (*Accruent is the company that owns the FAMIS software. WisDOT Roadside Facilities subscribes to the system.*) Historical data, documents and records are maintained in FAMIS and accessible for program and budgetary planning purposes by WisDOT, DSPN RF and Service Providers.

Analytical Data Reports

The traffic data has been useful to Roadside Facilities program managers in evaluating site maintenance funding needs. The traffic counts provide a general comparison for evaluating budgets as well as specific data on hourly and daily traffic variations used to develop maintenance crew work schedules at the roadside facilities. DSPN RF has developed a comparison chart of traffic counts versus site budgeted figures. This has proved useful when negotiating levels of service and budgets for maintenance service provider contracts.

Water Comparison Report

Calendar Years 2018, 2019, 2020 and 2021 Average Monthly Gallons of Water Usage Comparison

Rest Area Maintenance Program CY 2021 Traffic and FY 2021 Budget Cost Comparison

Report Information: The Operating CCLM (Custodial Care and Landscape Maintenance) services by the maintenance service provider Budget for paired sites (i.e. RA 11 & RA 12) is shown with an equal split for the December 2020-November 2021 Period (CY2021). Paired sites have an operational advantage because they are close in proximity to each other and thus may gain certain efficiencies in personnel and equipment over those serving as a single site. The Operating Budget also includes Special Vendor Service costs for trash, plumbing, electrical, HVAC, septic, well services, etc. and are noted as per the range of these costs below; these costs are dependent on each site's mechanical systems. This report shall be used as a reference tool.
