REPORT SUMMARY

Introduction

Rehabilitation For Wisconsin, Inc. (RFW) maintains a comprehensive database of roadside facility traffic counts and water usage as part of their program management services for the Wisconsin Department of Transportation Rest Area Maintenance Program. The data collected is used for various purposes including comparing traffic volume to site maintenance costs, adjusting work schedules to accommodate site use, analyzing budgets, and evaluating facility construction needs. This report is organized into the following sections:

- Water Comparison Report: 2006/2005/2004/2003**
- Traffic Comparison Report: 2006/2005/2004/2003**
- Traffic vs 2007 Budget Report**
- 2006 Seasonal Site Traffic Counts: by ADT**
- Overall Seasonal Site Traffic Counts: by County**
- Traffic Count/Water Usage by County Summary**

"Water Comparison Report" Summary

The "Water Comparison Report" shows the average water usage per month for each year-round rest area site from 2003 to 2006. Overall, water usage for 2006 averaged 65,044 gallons per month per site. This is lower than 2005, which averaged 70,735 per month per site. Between 2005 and 2006, the following individual sites experienced an increase in water usage greater than 10%:

<u>County</u>	<u>Site name</u>	<u>% Change Between 2006 vs. 2005</u>
Douglas	WWC 23	12.75%

Potential explanations:

- Douglas WWC 23 – There were some faulty flush valves replaced.

The following sites experienced a decrease greater than 15% in water use.

<u>County</u>	<u>Site name</u>	<u>% Change Between 2006 vs. 2005</u>
Grant	WWC 106	-39.84%
Juneau	RA 9	-42.64%
Juneau	RA 10	-46.12%
Kenosha	WWC 26	-19.39%
Walworth	RA 35	-31.18%

Potential explanations:

- Grant WWC 106 – Traffic decreased by 4.08% reducing water use.
- Juneau RA 9 – There was excessive water usage in CY 2005. CY 2006 had normal usage which showed a decrease.
- Juneau 10 – There was excessive water usage in CY 2005. CY 2006 had normal usage which showed a decrease.
- Kenosha WWC 26 – Traffic decreased by 5.91% reducing water use.
- Walworth RA 35 – Installed new meter. The old one is suspected of being defective.

"Traffic Comparison Report" Summary

The "Traffic Comparison Report" compares the Average Daily Traffic (ADT) for Calendar Years 2003 to 2006 for sites with permanent traffic counters (only located at year-round facilities). The

average daily traffic in 2006 was 720 cars per-site per-day or an average of 1,800 people per-site per-day. Overall, the ADT in 2006 was lower than 2005 by 3.17%--which is an average of 24 less cars per-site per-day and an average of 60 less people per-site per-day.

The sites below experienced a five percent increase in ADT in 2006 vs. 2005.

<u>County</u>	<u>Site name</u>	<u>ADT % Change Between 2006 vs. 2005</u>
Walworth	WWC 24	5.41%

The sites below experienced greater than ten percent decrease in ADT in 2006 vs. 2005.

<u>County</u>	<u>Site name</u>	<u>% Change Between 2006 vs. 2005</u>
Jackson	RA 54	-20.08%
La Crosse	WWC 31	-25.54%

Jackson County Rest Areas 53 and 54 was closed due to road construction from April through June and after Labor Day to the end of October. At Welcome Center #31 in LaCrosse County, the counter was removed while site roadway repair projects were being completed. The traffic counter at the Welcome Center is expected to be put back in 2007.

Seasonal Site Traffic

The "CY 2006 Seasonal Site Traffic Report" summarizes the Average Daily Traffic (ADT) for the counted seasonal sites in 2006. The traffic data for the seasonal sites is collected on a per-request basis. Most counts are taken over a two-week period during the busy summer/early fall months. The sites with the highest traffic counted during this period include Waushara County W-6 with an ADT of 342, St. Croix County W-3 with an ADT of 226, and Ashland County W-2 with an ADT of 192. The overall ADT at the seasonal sites counted during 2006 was an average of 114 cars per day which calculates to 285 people stopping at the seasonal sites on average per day.

The "Overall Seasonal Site Traffic Report" lists the ADT counts taken at all of the seasonal sites between calendar years 2002 and 2006.

"Traffic Count/Water Usage Report" Summary

The attached "Traffic Count / Water Usage" report is organized by county, then by site. Each site section lists traffic counts and water data (if applicable) and amenities. The report includes traffic or water notes if pertinent. Occasional problems with the traffic counter equipment is noted; frequent equipment problems may cause the data to be distorted slightly and may help to explain why the traffic may be somewhat higher or lower than the previous month.

The data categories represent:

- Car ADT** – the average daily number of cars counted at temporary count sites
- Truck ADT** – the average daily number of trucks counted at temporary count sites
- CombADT** – the average daily number of cars and trucks counted at continuously counted sites
- Total ADT** – the average daily count of both cars and trucks at all counted sites
- Monthly H2O Usage** – the total number of gallons of water used during the month
- Notes** - Notes indicate when traffic was counted for temporary count sites; if there were any problems with the equipment and when the traffic counter was down; or any well notes included on the water meter reading sheets.

Traffic vs. Budget Cost Comparison

The traffic and budget cost comparison report is a reference tool that has proved to be useful to WisDOT and RFW. The report lists the current year's AADT and the current operating budget for custodial care and landscape maintenance services by the maintenance service provider for each site. The budgeted costs are based on the State's fiscal year of July 1 – June 30. The Rest Area Maintenance Program has eleven (11) pairs of rest areas and ten (10) single rest areas. The paired sites have an operational advantage because they are close in proximity to each other and thus may gain certain efficiencies in personnel and equipment. Also included in the operating budgets are "Special Vendor Services" for professional vendors to perform trash pickup, HVAC, electrical, plumbing or septic services, etc. The needs for Special Vendor Services vary greatly from site to site.

The comparison report is separated into two sections: sorted by traffic volume and sorted by budget. The report also provides a cost per vehicle rate based on the custodial care and landscape maintenance services budget.

Data Management

The information is processed using Microsoft ACCESS, database software. Information for each site is entered into one database file then linked to the data file. Reports are produced grouped by county, listing site information and specific traffic and/or water data.

The WisDOT Information Technology and Management Section sends traffic data reports to RFW monthly. The monthly reports include permanently counted sites including year-round sites and continuous mainline highways. WisDOT's Bureau of Highway Operations requests annually that various seasonal sites be counted. These counts are also sent to RFW. The monthly average daily traffic (MADT) figure is entered for permanent counter sites while the annual average daily traffic (AADT) is entered for cars and trucks at temporary counter sites. WisDOT's traffic count year begins in December and ends November of the following year.

Water use is recorded daily at all year-round roadside facilities by the site maintenance personnel. The majority of the facilities' water meters register water use in gallons, while others register the use in cubic feet. All report data is converted and presented in gallon quantities. Monthly water reading reports are sent to RFW for processing and filing. RFW ensures that all reports are received in an accurate and timely manner.

Analytical Data Reports

The traffic data has been useful to the RAM program managers in evaluating site maintenance funding needs. The traffic counts provide a general comparison for evaluating budgets as well as specific data on hourly, daily, and seasonal traffic variations used to develop maintenance crew work schedules at the roadside facilities. RFW has developed a comparison chart of traffic counts versus site budgeted figures. This has proved useful when negotiating levels of service and budgets for maintenance service provider contracts.

In addition, traffic counts are used to direct tourism literature to year-round sites. Sites receive tourism literature based on actual visitors. Using this data allows each site to distribute their limited tourism materials to the traveling public more accurately. Traffic flow charts are made available to rest area maintenance crews.

Rest Area Maintenance Program 2006 Traffic and FY 2007 Budget Cost Comparison

Report Information: The Operating CCLM (Custodial Care and Landscape Maintenance services by the maintenance service provider) Budget for paired sites (i.e. RA 11 & RA 12) is shown with an equal split. Paired sites have an operational advantage because they are close in proximity to each other and thus may gain certain efficiencies in personnel and equipment over those serving as a single site (generally all WWC sites). The Operating Budget also includes Special Vendor Service costs for trash, plumbing, electrical, HVAC, septic, well services, etc. and are noted as per the range of these costs below; these costs are dependent on each site's mechanical systems. This report shall be used as a reference tool.
