REPORT SUMMARY

Introduction

Rehabilitation For Wisconsin, Inc. (RFW) maintains a comprehensive database of roadside facility traffic counts and water usage as part of their program management services for the Wisconsin Department of Transportation Rest Area Maintenance Program. RFW began providing this service in 1996 as part of the program record keeping responsibilities. The data collected is used for various purposes including comparing traffic volume to site maintenance costs, adjusting work schedules to accommodate site use, analyzing budgets, and evaluating facility construction needs. This report is organized into the following sections:

Water Comparison Report: 2004/2003/2002/2001
Traffic Comparison Report: 2004/2003/2002/2001
2004 Seasonal Site Traffic Counts: by ADT
Overall Seasonal Site Traffic Counts: by County
Traffic Count/Water Usage by County Summary

"Water Comparison Report" Summary

The "Water Comparison Report" shows the average water usage per month for each year-round rest area site from 2001 to 2004. Overall, water usage for 2004 averaged 71,514 gallons per month per site. This is lower than 2003, which averaged 75,110 per month per site. Between 2003 and 2004, the following individual sites experienced an increase in water usage greater than 10%:

<u>County</u>	<u>Site name</u>	<u>% Change Between 2004 vs. 2003</u>
Kenosha	RA 26	28.09%
Dodge	RA 63	24.01%
Dodge	RA 64	23.64%
Marquette	RA 82	14.15%
St. Croix	TIC 25	19.49%
Walworth	RA 24	20.27%
Walworth	RA 35	20.95%

Potential explanations:

Kenosha RA 26 – The water use increased due to a 21.93% increase in traffic in 2004 compared to 2003. Highway construction preceded the rest area which could have contributed to higher facility use.

Dodge RA 63 – There has been an apparent increase of people per vehicle.

Dodge 64 – There were well and plumbing issues.

Marquette RA 82 – There were well and plumbing issues that contributed to increased water use.

St. Croix TIC 25 – There has been an apparent increase of people per vehicle.

Walworth RA 24 – The installation of a new water meter may have impacted water use data.

Walworth RA 35 – There were plumbing issues (water pressure) and numerous area concerts may have caused increased water use.

The following sites experienced a decrease greater than 10% in water use.

<u>County</u>	<u>Site name</u>	<u>% Change Between 2004 vs. 2003</u>
Rock	RA 22	-10.62%
Columbia	RA 12	-10.67%
Douglas	RA 23	-14.72%
Grant	TIC 106	-54.35%
Juneau	RA 9	-48.80%
Waupaca	RA 101	-33.99%
La Crosse	RA 31	-21.48%
Dunn	RA 61	-12.54%
Dunn	RA 62	-20.47%

Potential explanations:

Rock RA 22 – Interstate road construction reduced the amount of people who stopped at the site.

Columbia RA 12 – There were water meter equipment problems.

Douglas RA 23 – The site was temporarily closed due to construction.

Grant TIC 106 – The water use decreased due to reduced landscape watering needs.

Juneau RA 9 – The water use decreased due to reduced landscape watering needs.

Waupaca RA 101 – There were fewer plumbing issues and the site temporarily closed lead to reduced water use.

La Crosse RA 31 - There was a 15.54% decrease of traffic at RA 31 reducing water use.

Dunn County RA 61 & 62 – The decrease in water use due to highway road construction causing the sites to be closed or traffic being diverted from the sites.

"Traffic Comparison Report" Summary

The "Traffic Comparison Report" compares the Average Daily Traffic (ADT) for Calendar Years 2001 to 2004 for sites with permanent traffic counters (only located at year-round facilities). The average daily traffic in 2004 was 774 cars per-site per-day or an average of 1,935 people per-site per-day. Overall, the ADT in 2004 was slightly lower than 2003 by 0.94%--which is an average of 7 less cars per-site per-day and an average of 18 less people per-site per-day.

The sites below experienced greater than a five percent increase in ADT in 2004 vs. 2003.

<u>County</u>	<u>Site name</u>	<u>ADT % Change Between 2004 vs. 2003</u>
Kenosha	RA 26	21.93%
Walworth	RA 24	20.48%
Grant	TIC 106	6.38%

The site below experienced greater than a ten percent decrease in ADT in 2004 vs. 2003.

<u>County</u>	<u>Site name</u>	<u>% Change Between 2004 vs. 2003</u>
La Crosse	RA 31	-15.54%

Seasonal Site Traffic

The "CY 2004 Seasonal Site Traffic Report" summarizes the Average Daily Traffic (ADT) for the counted seasonal sites in 2004. The traffic data for the seasonal sites is collected on a per-request basis. Fewer seasonal site traffic counts were completed in 2004 than in previous years due to fewer counts being scheduled and some counts not being completed for a variety of reasons such as equipment problems, site flooding conditions, and scheduling issues.

Historically, counts are taken over a two-week period, including two weekends, during the busy summer/early fall months. However, the 2004 seasonal site counts were collected over an approximately three to eight day period which may not have included one weekend. The sites with the highest traffic counted during this period include Lincoln W-4 with an ADT of 391 and Vilas County W-23 with an ADT of 256. The overall ADT at the seasonal sites counted during 2004 was 140 which calculates to 350 people stopping at the seasonal sites on average per day.

The "Overall Seasonal Site Traffic Report" lists the ADT counts taken at all of the seasonal sites between calendar years 2000 and 2004.

"Traffic Count/Water Usage Report" Summary

The attached "Traffic Count / Water Usage" report is organized by county, then by site. Each site section lists traffic counts and water data (if applicable). Also listed is the facility location and highway annual average daily traffic (AADT) count and year taken. The report includes traffic or water notes if pertinent. Occasional problems with the traffic counter equipment is noted; frequent equipment problems may cause the data to be distorted slightly and may help to explain why the traffic may be somewhat higher or lower than the previous month.

The data categories represent:

Car ADT – the average daily number of cars counted at temporary count sites

Truck ADT – the average daily number of trucks counted at temporary count sites

CombADT – the average daily number of cars and trucks counted at continuously counted sites

Total ADT – the average daily count of both cars and trucks at continuous or temporary count sites

Monthly H2O Usage – the total number of gallons of water used during the month

Notes - Notes indicate when traffic was counted for temporary count sites; if there were any problems with the equipment and when the traffic counter was down; or any well notes included on the water meter reading sheets.

Data Management

The information is processed using Microsoft ACCESS, database software. Information for each site is entered into one database file then linked to the data file. Reports are produced grouped by county, listing site information and specific traffic and/or water data.

The WisDOT Information Technology and Management Section sends traffic data reports to RFW monthly. The monthly reports include permanently counted sites including year-round sites and continuous mainline highways. WisDOT's Bureau of Highway Operations requests annually that various seasonal sites be counted. These counts are also sent to RFW. The monthly average daily traffic (MADT) figure is entered for permanent counter sites while the annual average daily traffic (AADT) is entered for cars and trucks at temporary counter sites. WisDOT's traffic count year begins in December and ends November of the following year.

Water use is recorded daily at all year-round roadside facilities by the site maintenance personnel. The majority of the facilities' water meters register water use in gallons, while others register the use in cubic feet. The software program RFW uses includes a calculation to report the cubic feet in gallons. Monthly water reading reports are sent to RFW for processing and filing. RFW ensures that all reports are received in an accurate and timely manner. Monthly water use data is reported in gallons.

Analytical Data Reports

The traffic data has been useful to the RAM program managers in evaluating site maintenance funding needs. The traffic counts provide a general comparison for evaluating budgets as well as specific data on hourly, daily, and seasonal traffic variations used to develop maintenance crew work schedules at the roadside facilities. We have developed a comparison chart of traffic counts versus site budgeted figures. This has proved useful when negotiating levels of service and budgets for maintenance service provider contracts.

An additional use of the traffic counts is to direct tourism literature to year-round sites. Sites will receive tourism literature based on actual visitors. Using this data allows each site to distribute their limited tourism materials to the traveling public more accurately. Traffic flow charts are made available to maintenance crews at year-round sites through the RAM Program.

Water Comparison Report

Calendar Years 2001, 2002, 2003 and 2004 Average Gallons of Water Usage Per Month Comparison
