Introduction

Rehabilitation For Wisconsin, Inc. (RFW) maintains a comprehensive database of traffic counts and rest area water meter readings. RFW developed this database in 1996 as part of the record keeping responsibilities for the WisDOT/RFW Rest Area Maintenance contract. The data collected is used for various purposes including comparing traffic volume to site maintenance costs, adjusting work schedules to match site use, analyzing budget requests, and evaluating facility expansion.

"Water Comparison Report" Summary

The "Water Comparison Report" shows the Average Water Usage per month for each rest area site in 2000 - 2003. Overall, water usage for 2003 averaged 75,110 gallons per month. This is slightly lower than 2002, which averaged 77,777 per month. Between 2002 and 2003, several individual sites experienced an increase of 10% or more:

<u>County</u>	<u>Site name</u>	<u>% Change Between 2003 vs. 2002</u>
Walworth	RA 35	52.25%
Grant	TIC 106	40.61%
Waupaca	RA 101	23.96%
Juneau	RA 9	23.52%
Monroe	RA 16	17.28%
La Crosse	RA 31	16.13%
Manitowoc	RA 52	12.43%

Walworth RA 35 water increased due to several reasons including problems with the water pressure at the site, an increase in the traffic at the site by 6%, and to the watering of the new plants and shrubs planted at the site during the summer months. Grant TIC 106, Manitowoc RA 52, and Juneau RA 9 increased their water use in the summer months due to the dry conditions creating a need to water the landscape plantings more frequently. Dry conditions and increased traffic contributed to increased water use at Waupaca RA 101, Monroe RA 16, and La Crosse RA 31.

Several sites experienced a decrease of over 20% in water usage.

<u>County</u>	<u>Site name</u>	<u>% Change Between 2002 vs. 2001</u>
Jefferson	RA 14	-41.43%
Kenosha	RA 26	-30.81%
Dunn	RA 61	-28.72%
Dodge	RA 64	-25.19%

Jefferson RA 14 water use decreased as the site entered its second year of operation causing a decrease in the watering of the new grass, plants and the overall testing of the water system. Kenosha RA 26 water use decreased due to a decrease in traffic at the site caused by highway and SWEF construction. Both Dunn county rest areas experienced a decrease in water use due to highway road construction causing the sites to be closed or traffic being diverted from the sites during the summer months. Well problems in September and October of 2003 contributed to Dodge RA 64 water use decrease of 33%. The problems caused the restrooms to be closed during those months while portable toilets were available to travelers.

"Traffic Comparison Report" Summary

The "Traffic Comparison Report" compares the Annual Average Daily Traffic (AADT) for Calendar Years 2000 - 2003 for sites with permanent traffic counters. The average daily traffic in 2003 was 781 cars per-site per-day or an average of 1,953 people. Overall, the Average Daily Traffic (ADT) in 2003 was slightly higher than in 2002 by 3.40%--that is an average of 26 more cars per-site per-day and an average of 65 more people per-site per-day in 2003 than in 2002.

The sites below experienced over a five percent increase in ADT in 2003 vs. 2002.

<u>County</u>	<u>Site name</u>	<u>ADT % Change Between 2003 vs. 2002</u>
Monroe	RA 16	87.42%
La Crosse	RA 15	83.62%
La Crosse	RA 31	11.90%
St. Croix	TIC 25	9.59%
Walworth	RA 35	6.77%

Traffic data is collected from the Monroe RA 16 and La Crosse RA 15 using temporary counters. In 2002, the counts were done over several weeks between May through August making the overall average reflect the entire summer counts. In 2003, the traffic counts were done only for a two week period at the end of July/beginning of August. Therefore, the overall average in 2003 was higher than in 2002 as August is typically one of the busiest months.

The site below experienced over a ten percent decrease in average daily traffic in 2003 vs. 2002.

<u>County</u>	<u>Site name</u>	<u>% Change Between 2002 vs. 2001</u>
Kenosha	RA 26	-11.60%

Seasonal Site Traffic

The "CY 2003 Seasonal Site Traffic Report" summarizes the Annual Average Daily Traffic (AADT) for the seasonal sites in 2003. The traffic data for the seasonal sites is collected annually on a per-request basis. Most counts are taken over a two-week period during the busy summer/early fall months. The sites with the highest traffic counted during this period include Waushara W-6 with an average of 309 cars per day; Door County W-8 with an average of 252 cars per day; and Bayfield County W-6 with an average of 239 cars per day. The overall average daily traffic at seasonal sites during 2003 was 134 cars per day or 335 people stopping at the seasonal sites on average per day.

The "Overall Seasonal Site Traffic Report" lists the AADT counts taken at all of the seasonal sites between 1999 - 2003.

"Traffic Count/Water Usage Report" Summary

The attached "Traffic Count / Water Usage" report is organized by county then by site. Each site section lists traffic counts and water data (if applicable). Also listed is the facility location and highway annual average daily traffic (AADT) count and year taken. The report includes traffic or water notes if pertinent. Occasional problems with the traffic counter equipment is noted; frequent equipment problems may cause the data to be distorted slightly and may help to explain why the traffic may be somewhat higher or lower than the previous month.

The data categories represent:

Car ADT – Number of cars counted at temporary counted sites

Truck ADT – Number of trucks counted at temporary counted sites

CombADT – Number of cars and trucks counted at continuously counted sites.

Total ADT – Count of both cars and trucks at continuous or temporary counted sites.

Monthly H2O Usage - Total number of gallons of water used during the month.

Notes - Notes indicate when traffic was counted for temporary counted sites; if there were any problems with the equipment and when the traffic counter was down; or any well notes included on the water meter reading sheets.

Data Management

The information is processed using Microsoft ACCESS, database software. Information for each site is entered into one database file then linked to the data file. Reports are produced grouped by county, listing site information and specific traffic and/or water data.

The WisDOT Information Technology and Management Section sends traffic data reports to RFW monthly. The monthly reports include permanently counted sites including year-round sites and continuous mainline highways. WisDOT's Bureau of Highway Operations requests annually that various seasonal sites be counted. These reports are also sent to RFW. The monthly average daily traffic (MADT) figure is entered for permanent counter sites while the average daily traffic (ADT) is entered for cars and trucks at temporary counter sites. WisDOT's traffic count year begins in December and ends November of the following year.

Water usage is recorded daily at all year-round roadside facilities by the site maintenance personnel. The majority of the facilities' water meters register water usage in gallons, while others register the usage in cubic feet. The software program RFW uses includes a calculation to report the water usage in gallons. Monthly water reading reports are sent to RFW for processing and filing. RFW ensures that all reports are received in an accurate and timely manner. Monthly water usage data is included within the report, reported in gallons.

Analytical Data Reports

The traffic data has been useful to the RFW RAM program management staff in analyzing whether work center budgets are funded appropriately and if the traffic pattern warrants a change in work schedules at year round sites. By using this initial data, we have developed a comparison report of traffic counts versus site budgeted figures. This has proved valuable when negotiating service and budget issues with work center and WisDOT personnel.

Those sites with permanent traffic counters will receive tourism literature based on actual visitors. Using this data will allow each site to distribute their limited tourism materials to the traveling public more accurately on a monthly basis. Traffic flow charts are made available to year-round sites distributing tourism literature through the RAM Program.

Water Comparison Report

Calendar Years 2000, 2001, 2002 and 2003 Average Gallons of Water Usage Per Month Comparison
