

Lamitex® EK50

Lamitex® EK50 is a Kevlar®aramid fabric with a high temperature phenolic bond. It possesses excellent moisture and chemical resistance while maintaining dependable dimensional stability in continuous high temperature environments. EK50 is custom formulated for use as rotor vane material in compressors and vacuum pumps for industrial processing and liquefied gas transfer. It is also an exceptional material for high temperature bearings, wear strips and other high temperature and high load bearing applications.
