

Timber Coffee Table

Timber framing or post & beam construction is an established, sustainable method of building structures using large greenwood beams and traditional joinery techniques. The Timber series celebrates this time-honored tradition by highlighting the raw beauty of its foundational materials. Crafted from a blend of reclaimed and newly sourced Pine harvested in Quebec, the Timber Coffee Table brings together twenty individual logs revealing a striking end grain pattern as the table's surface.

CHARRED EASTERN WHITE PINE, OIL & WAX
