

EUROPEAN-ENGINEERED DECKING,
SELECTED FOR CANADIAN WEATHER.

CANADA'S EXCLUSIVE SOURCE FOR
TARIMATEC COMPOSITE DECKING

A curated collection of Tarimatec decking
systems and finishes for residential, hospitality,
and commercial projects across Canada.

WHY ZINO

A CURATED COLLECTION, NOT A CATALOGUE.

Not every Tarimatec product belongs in the Canadian market. Zinodeck has selected the collections and profiles that best match how Canadians build, specify, and live outdoors: the clean architectural tones of Chromatic, the natural warmth of Wood, the expressive textures of Ethnic, and the structural confidence of solid-profile decking.

We pair European engineering with Canadian project support, helping homeowners, designers, and builders choose the right finish, the right profile, and the right installation path for the job.

EUROPEAN ENGINEERING.
CANADIAN EXPERTISE.

long service life

WHY COMPOSITE

DESIGNED FOR OUTDOOR LIVING, NOT ANNUAL UPKEEP.

The visual warmth of timber without the yearly cycle of sanding, sealing, and staining.

TRADITIONAL WOOD

- Needs regular sealing or staining
- Vulnerable to moisture, rot, and surface wear
- More demanding to keep looking consistent over time
- Higher upkeep across changing seasons
- Less predictable in wet, exposed conditions

ZINODECK COMPOSITE

- Low maintenance and easy to clean
- Resistant to moisture, UV rays, and weather conditions
- Long-lasting colour and finish stability
- Cleaner, more consistent appearance over time
- Original accessories and professional installation support available

The upgrade is not only durability. It is getting a better-looking outdoor space without inheriting a maintenance routine.

MATERIAL SCIENCE

ECOFIBER STONE COMPOSITE, BUILT FOR LONG SERVICE LIFE.

At the core of every Zino decking board is Tarimatec's proprietary Ecofiber Stone Composite: an advanced formulation that combines limestone, PVC, and recovered rice husk into a material engineered for durability, finish quality, and long-term outdoor use.

Unlike wood-based composites, the plant fibre in the formulation is rice husk rather than wood or wood waste. That matters in real-world performance, helping the material resist water absorption and rot while supporting a more stable, lower-maintenance surface.

50% RECOVERED RICE HUSK

A plant-based fibre that gives value to agricultural by-product instead of timber fibre.

40% RECYCLED MATERIALS

Reintegrated factory scrap, reclaimed sanding waste, and recovered material are fed back into production.

56.8% RENEWABLE ENERGY

Manufacturing uses a high share of renewable energy.

100% RECYCLABLE BOARDS

Boards, accessories, and components are designed for recyclability.

25 YEARS WARRANTY

Long service life is central to the product story.

VERIFIED DOCUMENTATION

EPD, Environmental Product Sheet, ISO 9001, and ISO 14001 support specification-grade credibility.

Technical manual, environmental documentation, and project guidance are available through Zinodeck.

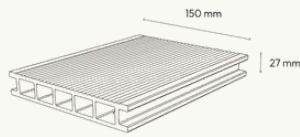

DECKING

CHOOSE THE PROFILE THAT FITS THE JOB.

One design language. Two structural answers. Both profiles share the same Ecofiber Stone Composite formulation and finish quality. The difference is structural weight and load capacity.

CHROMATIC

FIVE CLEAR TONES. TWO SURFACE EXPRESSIONS.

Chromatic is the most disciplined collection in the Canadian range: five flat, contemporary tones chosen for projects that want visual order, contrast, and architectural calm.

Use Nature for a softer brushed expression or Tecno for a more linear, grooved surface.

WOOD

THE WARMTH OF WOOD, IN A MATERIAL MADE TO STAY THAT WAY.

Wood captures the grain, depth, and variation people want from natural timber while replacing the maintenance burden that usually comes with it. Fourteen tones give residential, hospitality, and commercial projects a warmer visual language without sacrificing practicality.

ETHNIC

MORE TEXTURE. MORE CHARACTER.

Ethnic adds tactility and personality through a subtle grooved-and-brushed surface. It is the most expressive collection in the Canadian assortment: ideal for projects that want visual movement, depth, and a finish that feels intentionally designed rather than merely installed.

APPLICATIONS

READY FOR BACKYARDS, ROOFTOPS, TERRACES, AND PUBLIC-FACING PROJECTS.

RESIDENTIAL

For patios, pool decks, rooftop terraces, and backyard living spaces that need warmth, finish quality, and lower maintenance over time.

COMMERCIAL

For retail frontages, office terraces, walkways, and public-facing projects where traffic, presentation, and durability all matter.

HOSPITALITY

For hotels, spas, restaurants, and resort environments where the finish has to feel refined while performing under constant use.
