

Recycled Ironbark Wharf Decking

Recycled hardwood decking offers a level of character and distinction that new timber simply can't replicate. Milled from historic wharf decking, every board carries decades of weathering, imprinting it with deep grain patterns, tonal variation, and a patina that luxury builds increasingly seek out. This is not a commodity board — it's a material with provenance. The result is decking with presence rich in heritage, robust in performance, and defined by the unmistakable depth and authenticity of aged hardwood.

- Every board is 100% reclaimed from century-old structural hardwood
- The natural aging, bolt markings, and weathered grain create a uniquely rustic aesthetic that cannot be achieved with new decking
- A naturally weathered, character-rich finish.
- Ages beautifully into a silver-grey patina with no oils or coatings required.
- Perfect for projects wanting a refined timeless look.
- The rough-sawn character face enhances texture and visual depth.

DURABILITY

- Ironbark is one of the most durable hardwoods
- Highly resistant to decay, insects, salt & moisture
- Ideal for harsh outdoor environments, high traffic areas, and coastal zones.

LOW MAINTENANCE

- No staining or oiling needed
- Minimal upkeep beyond normal cleaning
- Stable due to decades of prior seasoning

SUSTAINABLE

- Reduces landfill waste & new harvesting
- Retains the carbon stored in the timber

APPLICATIONS

Suitable for builds needing a premium, sustainable material with standout character:

- Residential decking & outdoor living spaces
- Commercial and hospitality boardwalks & terraces
- Coastal or marine-adjacent projects
- Eco-focused architectural projects
- Luxury builds wanting a truly distinctive, non-commodity decking material
