Who is Ferrum Health

Ferrum Health connects AI insights across service lines, turning fragmented deployments into enterprise clinical intelligence. Our vendor-neutral suite validates and monitors clinical AI models within a health system's owned, secure environment. Organizations use Ferrum to deploy models faster, validate performance objectively, and maintain complete visibility across their AI portfolio. Backed by \$31 million in funding, including a Series A led by Foundry, serving more than 350 care sites globally.

Product Description

Ferrum AI Governance Suite

The AI Governance Suite connects once to existing infrastructure, governs the entire clinical AI portfolio, and measures performance on a patient population without vendor bias.

Deployment Fabric

Integrate once with EMR, PACS, and worklists, then route every clinical AI model through a single secure path. Add new models and service lines without new integrations.

Model Hub

Curate and unify clinical AI from every source, FDA cleared, CE marked, open source, and homegrown, in a single governed catalog. Approve, route, and monitor each model across service lines.

Observability Lens

A continuous view of how models perform in the real world, by linking predictions, ground truth, and outcomes. A view for every model in the portfolio, providing independent validation, bias and drift monitoring.

Some Numbers

10wk Deployment

typical time from decision to first production go-live.

40M

lives governed across leading health systems.

75%

lower local compute cost vs. typical vendor cloud

2019

Patent filed for automated ground truth and clinical evidence generation

2 Founders

Co-Founded by Ken Ko (CTO) and Pelu Tran (CEO)
