

# Transforming Bedside Entertainment with Seamless Healthcare Delivery

Amino has successfully integrated with Epic to deliver a bedside TV solution designed for modern healthcare environments. Combining Epic’s MyChart Bedside TV platform with Amino’s enterprise-grade media players, the solution enables reliable, secure and scalable delivery of TV, infotainment and patient services, enhancing the in-room experience while supporting clinical workflows.

## Key Benefits of Our Collaboration

Amino, when integrated with Epic, delivers a rich patient experience including on-demand content, hospital information and interactive services. Amino’s devices ensure consistent, high-quality video playback with secure, long-life operation.

With remote monitoring, device management and zero-touch deployment via Amino Orchestrate, healthcare providers can deploy, manage and scale bedside services across single wards or entire hospital networks - securely and efficiently.

Our integrated solution combines Epic’s MyChart Bedside TV platform with Amino’s H200 series media players, purpose-built for healthcare environments.

## Key Benefits of Our Collaboration

### Designed for Healthcare

Purpose-built for hospitals and care environments, with built-in support for secure system integration, remote monitoring, zero-touch deployment and dependable long-life performance to enhance patient engagement, communication and bedside experience.

### Reliable, Clinical-Grade Performance

Amino's media players are engineered for 24/7 operation, delivering consistent, high-quality video and long-term reliability.

### Enhanced Patient Experience

Deliver on-demand content, hospital information and interactive services that improve comfort and patient experience, all on a single screen.

### Flexible Integration

Open APIs and a partner-friendly architecture enable integration with hospital systems, patient services and future applications. Amino easily provides access to multiple applications from one single media player.

### Secure and Compliant

Amino delivers enterprise-grade security with quarterly security patches and controlled device management, helping healthcare organisations meet critical IT and compliance requirements.

### Simple, Scalable, Cost-Effective Deployment

From single wards to multi-site healthcare groups, Orchestrate enables centralized control and updates, at scale – perfect for remote maintenance and operational cost saving.

## The Challenge

Healthcare environments are evolving rapidly. Patients expect more engaging, personalized experiences, while providers require secure, scalable and easy-to-manage technology.

Many legacy bedside systems struggle to keep pace – lacking flexibility, security updates and long-term support.

## The Solution

Amino provides a future-ready alternative: a fully integrated solution designed to evolve with healthcare needs, delivering continuous performance, security and innovation.

# Meeting the Demands of Modern Healthcare

## Here's how...

### Need to improve patient experience?

Deliver engaging, easy-to-use bedside infotainment that supports comfort and communication.

### Concerned about security and compliance?

Amino devices provide secure firmware and long lifecycles, with centralized control via Orchestrate.

### Replacing outdated systems?

Move beyond legacy bedside solutions with a flexible, modern platform designed for long-term use.

### Looking to scale across sites?

Deploy and manage devices across wards, hospitals and regions with zero-touch provisioning and remote updates.

The **Amino H200** can be found in Toolbox on Epic Showroom at:
