Satellite

Version 1.12

Satellite

The Satellite streamlines the process of integrating “external healthcare professionals” (HCPs) into the myoncare Careplan Manager. Satellites can be mapped exclusively to users holding the **‘External HCP’** role. Consequently, patient information becomes accessible only to these specific external HCPs when the QR code associated with their Satellite is scanned by patients.

To further enhance the Satellite assignment functionality, HCPs have the ability to directly assign patients to Satellites within the patient details section. It is the responsibility of the assigning myoncare customer (professional healthcare customer of myoncare such as e.g. hospitals, practices, other healthcare institutions) to ensure that their own terms and conditions and privacy policy grant the possibility to have **‘External HCPs’** within their own site. If necessary, the customer must establish any required site contracts between their organization and external healthcare professionals (HCPs).

Selecting **“Add Satellite(s)”** within ‘Edit Patient’ will allow the user to directly assign Satellites to the respective patient.
