

# NSSE Mobile App Every Civilian Becomes a Sensor

Anomaly Federal’s aerial intelligence mobile application “Enigma” is live in the App Store and Google Play today with over 650,000 downloads. Our mobile app can be replicated, white-labelled and tailored for usage for any type of National Special Security Event (NSSE), big and small based on customer’s needs. The solution turns every person with a smartphone into an edge sensor to detect, identify and geolocate UAS, reporting data one direction to the command center of your choosing.

## Computer Vision For Automated UAS Detection

The CV pipeline harnesses semantic sky segmentation and automated labeling to curate training data, then trains edge-deployable detectors for rapid analysis. The pipeline also focuses on object behavior such as strobing and movement patterns, which feed into object identification and threat scoring.

### Crowdsourced Network Is Alive Today

- 650K**

- 50K**  
Reports Received
- 2,264**  
Incursion Alerts

 Anomaly Federal is a U.S.-incorporated company with regional presence across NYC, DC, Denver, and San Diego — supporting mission partners on ISR and counter-UAS challenges with strong bipartisan backing.

## US critical infrastructures both overseas and in the homeland are facing next-gen aerial threats that encroach on our restricted airspace

Anomaly Federal works with traditional sensing modalities to create a layered defense approach to UAS detection, in both CONUS and OCONUS environments.

“What we need is a layered defence: awareness, different capabilities and an ecosystem that works together so we can defeat threats consistently.” - General Ross: JIATF-401

## Incursions by unified UAS in CONUS airspace

LANGLEY AFB, VA • DECEMBER 2023

Intelligence officials tapped Anomaly Federal's crowdsourced data and alert network to corroborate alarming aerial activity.

CONUS BASES • SPANNING 2025

NORAD commander Gen. Gregory Guillot revealed in February 2025 that there were over 350 unauthorized drone detections at military installations the previous year, affecting roughly 100 different sites.

TOWER 22, JORDAN • JANUARY 2024

On January 28, 2024, a Shahed drone launched by the Islamic Resistance in Iraq — an Iranian-backed militia — struck Tower 22, a U.S. outpost in Rukban, Jordan, killing 3 U.S. soldiers and injuring 47 others.

CONUS AIRSPACE • JANUARY 2025

Ted Stevens Anchorage International Airport reported over 6,000 UAS incursions to the Department of Justice in January 2026, covering incidents throughout 2025.
