

# Battleground Live

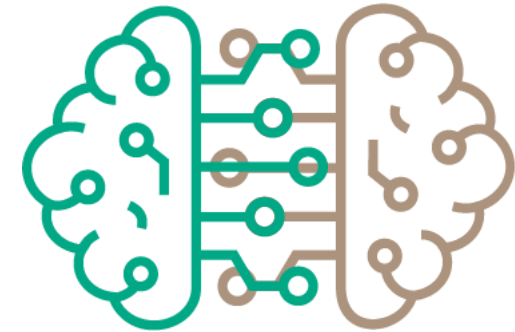

Risk and Resilience Modular Software

- 01 Fast implementation, Fully configurable.
- 02 Easy to use with AI assistance and mobile app
- 03 Designed to integrate into existing tech stack
- 04 Single click BCP Plans & Activation
- 05 Easy to use mass messaging

**Modular and Scalable Risk & Resilience System with 80+ active clients globally**

**24/7 Support by Risk & Resilience Experts**

#### Awards

**WINNER**

Continuity and Resilience Provider  
(Product/Service) 2025 & 2026

#### Certifications

Role Based Access

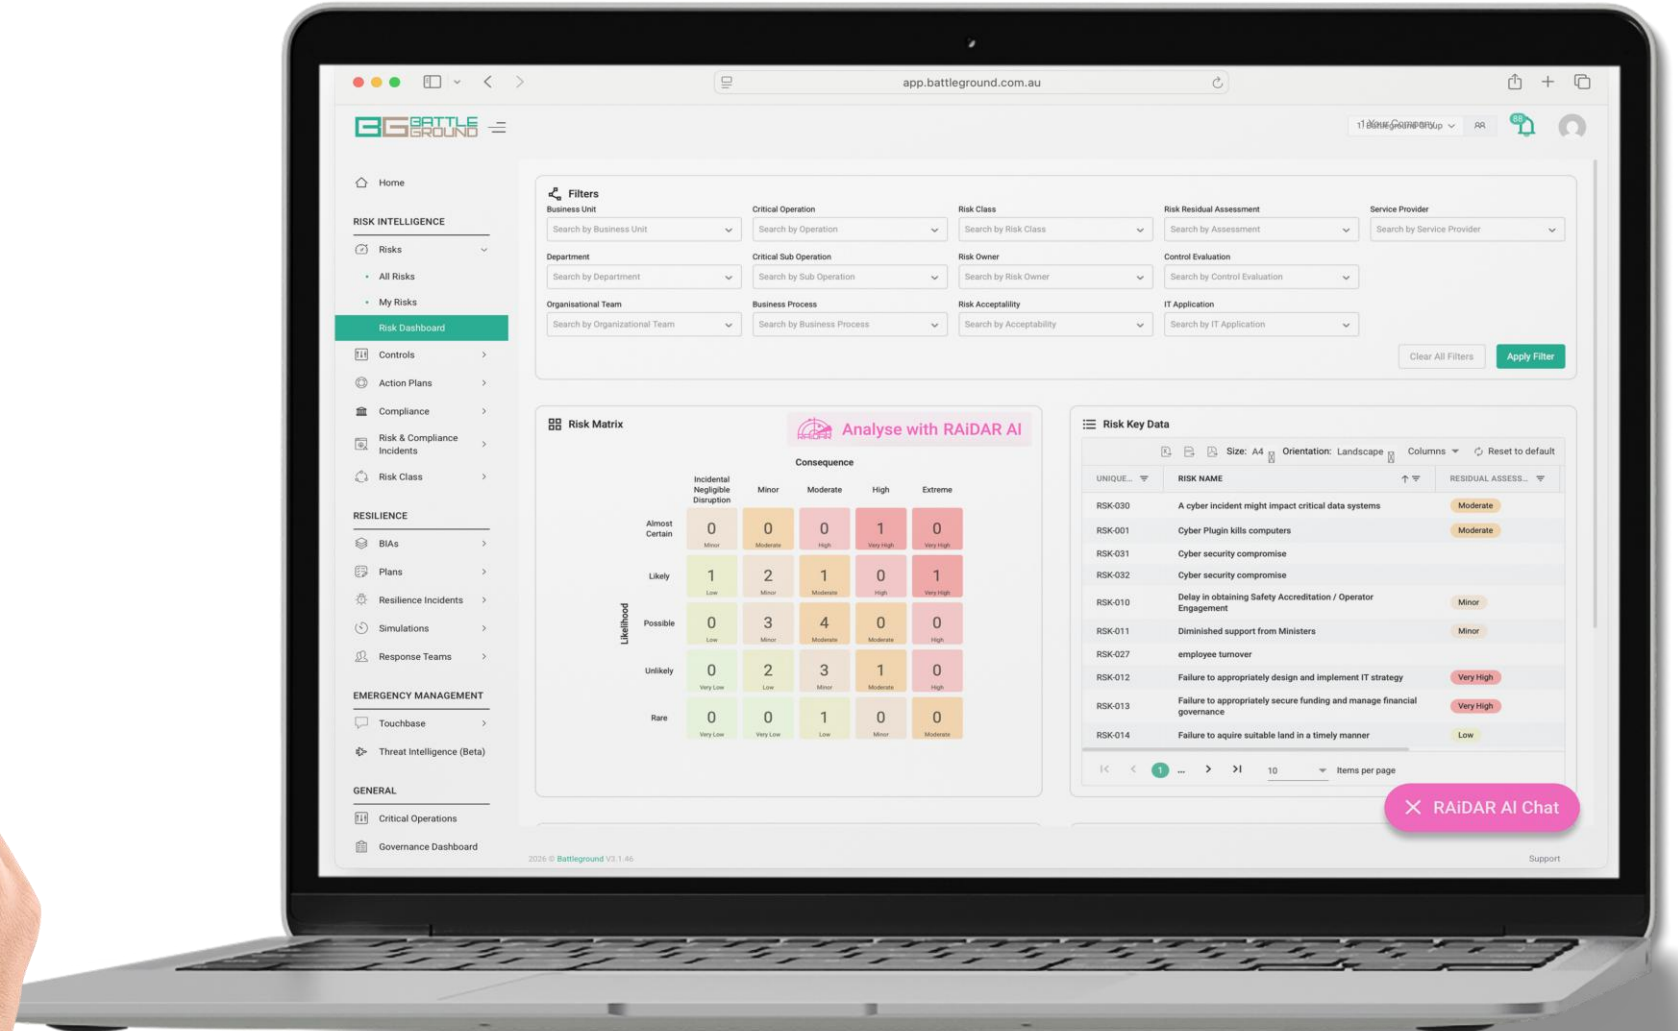

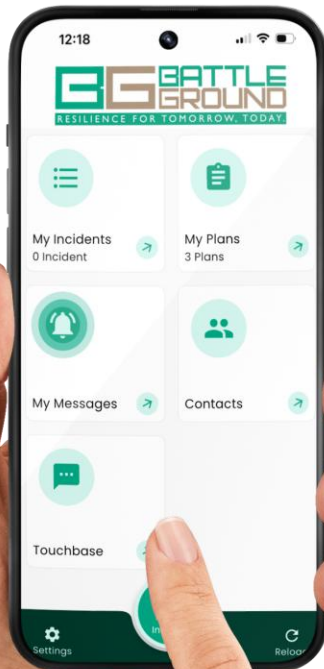

Clean layout and modular design

Intuitive, wizard-based design

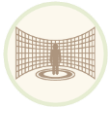

# Ease of use and engagement

# The Battleground Command Centre

The Master Dashboard replaces a dozen disconnected tools with one screen for dependency mapping, scenario testing, board reporting and regulator tracking, all reading from the same live registers.

## Dependency & Process Mapping

A dependency & process map with risks and controls laid directly onto it, so gaps are visible at a glance.

## Board Reporting

A full board pack, computed live and exported in one click, plus other reports you can print or build further with AI.

## Regulation and Assurance

Easily develop self assessments and other regulator requirements, and see exactly what is missing

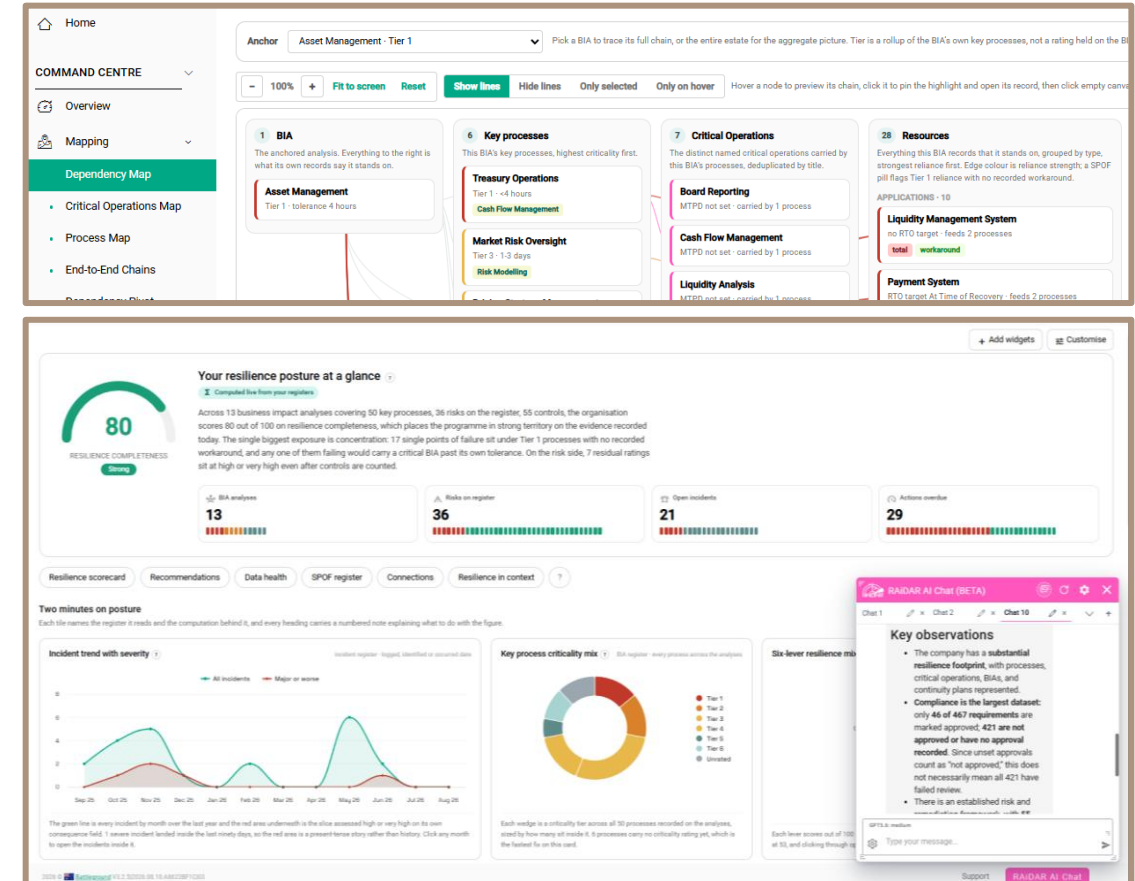

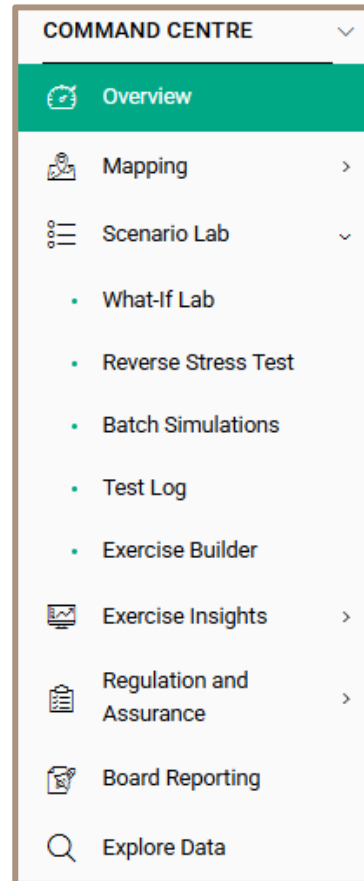

## Scenario Lab & What if analysis

Pick an item and the engine walks through exactly what will be affected, the AI computes all the impacts and worst-case scenario

## AI Built in and MCP Capability

Connect Battleground to your existing company AI so that you can understand and use the data in the same way you use Chat GPT or Claude.

# Multiple layers of AI built in (All fully encrypted and optional)

 **Embedded Across Every Field in the system, so that you can develop responses with a single click**

**MCP Connectivity: Your Existing AI Tools on Your Live Data with the ability to make reusable artifacts and board reports easily**

**Battleground Help: When a team member has a question, simply ask BG to get a quick response on how to do something in the system.**

## Ask anything to understand your data

Get an answer drawn straight from your own resilience data in seconds, with human review kept in the loop for audit defensibility.

## One sentence in, a board report out

Generate an exportable board report written to whatever you want from a single instruction, ready to present without manual formatting.

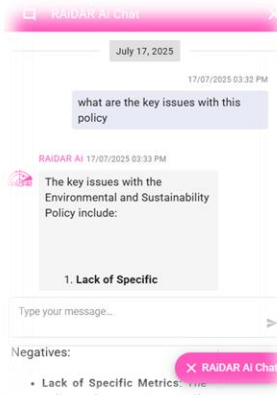

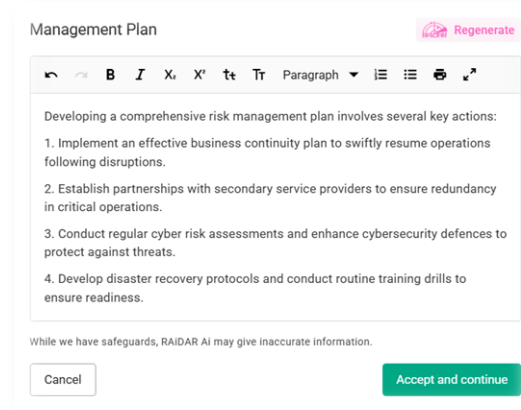

## Live dashboards and a digital twin

Build full dashboards from one instruction, saved once and always live, over a digital twin of your processes, people, applications and dependencies.

## Constantly evolving

Battlegrounds AI is constantly evolving, and you play a large part in that, by requesting and coming up with items which our tech team builds.
