

Sustainable agriculture & land management.

Agroforestry project in Kenya

A project in western Kenya promotes sustainable agriculture and land management practices to increase crop yields, protect the ecosystem, and alleviate poverty. This region faces high population densities and poverty, exacerbated by unsustainable farming and deforestation. **The project's focus is on creating resilient agricultural systems to safeguard the environment and enhance the livelihoods of local farmers.**

Sustainable agriculture

SALM (sustainable agriculture and land management) practices are introduced to the local farmers. These methods of farming result in higher crop yields and don't deplete the soil. By improving land use, agriculture will become more efficient and deforestation can be reduced.

Protecting the ecosystem

The Kenyan ecosystem is at risk. Its forests and grasslands represent huge climatic benefits and are also important for natural resources because they prevent soil erosion, ensure water regulation and of course, protect the biodiversity.

Improving livelihood

The region with its high population densities and relatively small land properties is the poorest in Kenya. the majority of farmers live in poverty and suffer from food insecurity. Sustainable agricultural practices raise crop yield, use the land better and therefore help significantly in reducing poverty.

Carbon credits accredited by VCS .

The VSC program is the most widely used voluntary GHG program. This independent non profit organisation checks the impact of the Project in terms of CO₂-emission reduction. To do so, a lot of data is collected on the spot, such as the amount of hectares protected under this new land management, CO₂ sequestered by the saved trees, number of people positively impacted, etc.

Your contribution makes a difference

This project not only brings environmental benefits but also delivers socio-economic advantages such as employment opportunities, economic growth, and community development. By promoting sustainable practices and social inclusivity, we strive for benefits for both people and the planet, leaving a positive and lasting impact for generations to come.
