

Act for biodiversity.

Restore nature close to home, in **Belgium**.

Biodiversity is under pressure. Our climate is changing faster than ever. It's time to rethink our relationship with the living world. Here. Now. Together.

How? By supporting local projects in Belgium, carried by farmers and forest managers who want to act. For more resilient forests. For healthier food. For the protection of wildlife and plants. And to help our regions adapt to a changing climate.

Small actions, close to home. Big impact, for the long run.

About PlantC

Since 2020, PlantC designs and implements local projects that restore degraded ecosystems and support biodiversity. We bring scientific expertise and resources to economic actors, farmers, forest managers and landowners. To act where we can have real, concrete impact. PlantC is B Corp certified and is committed to achieving sustainable business certification.

Every PlantC project works towards four combined goals:

- Supporting biodiversity
- Sequestering carbon
- Strengthening regional adaptation to climate change
- Developing a nature-based economy where people and nature work together.

ACT FOR TRAVEL

Our partnership with PlantC

Greentripper partners with PlantC to help you act on the impact of your travels by supporting a local environmental initiative. Together with PlantC, we want to support projects across Belgium that strengthen biodiversity and make our regions more resilient in the face of climate challenges.

Thanks to your contribution, we can support local projects like hedgerow planting or forest restoration. PlantC identifies, analyses and oversees the implementation of each project.
