Year 11

Half Term 1

B5 – Homeostasis:

You will learn about nerves and hormonal control in the human body as well as the way complex organs such as the eye and brain function.

Half Term 2

B6 – Genetics:

You will learn about the human genome and how cells undergo meiosis to produce gametes. You will find out how new organisms are made from the genetics of parents.

Half Term 3

B7 – Ecology:

You will learn how humans have affected the earth's environments and why it is important to manage our impact closely.

Half Term 4

GCSE Revision:

You will run through each of the 10 required practical activities again and apply learning to exam style questions. You should now be preparing for the final GCSE Exams.
