

Key Stage 3

Science

Overview

Overview to go here?

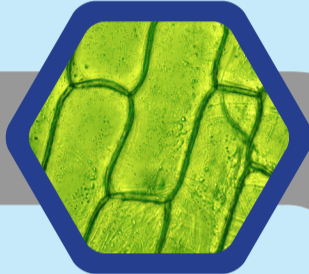

Year
9

Half Term 1

Biology 1

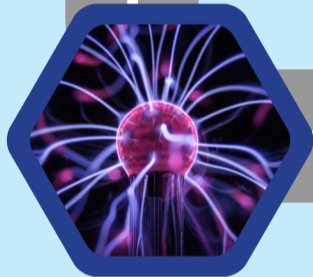

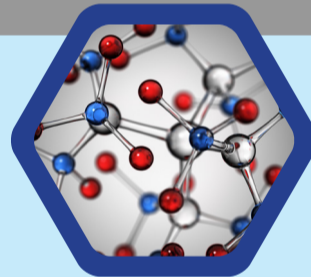

You will learn about the human body and the organs within it. You will also learn how plants are different to animals and what organs they have to survive.

Half Term 2

Chemistry 1

You will learn the basics of chemicals and how they interact with each other. You will gain knowledge on how these chemicals are different and how they were discovered.

Half Term 3

Physics 1

You will learn about energy and the way it moves through the universe, you will also find out about space and planets then link these ideas together.

Half Term 4

Biology 2

You will learn about ecosystems and the delicate balance that exists in nature, the way that people have lived in this ecosystem and how they have affected it.

Half Term 5

Chemistry 2

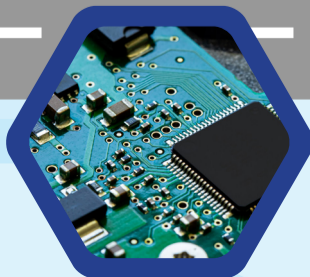

You will learn about the earth and how it formed as well as the way rocks have been changed over time and the activity of volcanoes and other natural disasters.

Half Term 6

Physics 2

You will learn about electricity and circuits, forces and the way they interact to make objects move, change speed or change shape.
