Firewall as a Service (FWaaS)

Complete, scalable, and reliable security for your network

What is Firewall as a Service (FWaaS)?

An integrated and modular full stack managed security offering from which businesses can build their own bespoke security posture.

The service is built on four key pillars:

- **Zero Trust Firewall**
- **Next-Generation Firewall**
- **Guest Wi-Fi Firewall**
- **Zero Trust Network Access**

Take the features you want from each to quickly and simply build a bespoke security posture, unique to your operational needs.

With no license costs or hardware lifecycle to manage you can consume FWaaS with a simple monthly payment for efficient, effective peace of mind.

Defence in depth, secure by design, flexibility as standard.

Why choose FWaaS?

- **Tailored for every need:** Choose from a suite of security and firewall services that fit every security model and network topology. Integrates with and complements existing security services such as ZTNA, Endpoint Security and EDR.
- **Flexible deployment options:** Delivered via dedicated hardware, as a hosted solution, a virtual deployment or cloud, all with High Availability and Active/Active options for uninterrupted operations.
- **Open source transparency:** Auditable open source stack with full code visibility. No vendor lock in or high, unpredictable costs.
- **Fully managed:** FWaaS takes the complexity out of network protection with 24/7 monitoring and management by our expert team.
- **Flexible contract and scalability:** No long contracts, licensing or hardware life cycles to deal with. Consume as a service and flex, scale and augment as your business needs change.
- **Reduce firewall spend:** Scale back unnecessary enterprise Next-Gen feature sets where endpoint protection and Zero Trust overlays have taken their place in securing all users everywhere.

Choose from a suite of security and firewall services that fit every security model and network topology

Key features and benefits

- **Low cost:** Enterprise grade, open source stack, with no licensing fees while maintaining feature rich customisable services.
- **Enhanced connectivity:** Build the security where it needs to be in your Ultimate Internet or Network as a Service connections. Fully integrated in your network backbone or on-board existing appliances.
- **Change management:** Full, auditable change management by our network and security teams, including full documentation of the entire network and security service.
- **Scalable:** On-demand flexibility without headaches and hassle.
- **Modular:** Options for encrypted cloud, web filtering, remote access VPN, guest Wi-Fi firewalling, IAM integration and more.
- **Integrable:** Take what you need to compliment your chosen vendor or posture of choice. For example, compliment your preferred ZTNA product with perimeter firewalling at the network edge.
- **Flexible:** Add and remove elements as needed.
- **Predictable:** Simple monthly fee, no relicensing, no end of life, includes patch management and firmware upgrades.

On-demand flexibility without headaches and hassle
