leet@agbyte.com.au

\*Images taken on a phone screen – PC will function similar but with some differences to the screen layout

1. Login screen to <https://bushlinx.au/agbyte/login> click on Public Access

  
**IoTfarm**  
KEEP AN EYE ON THE FARM

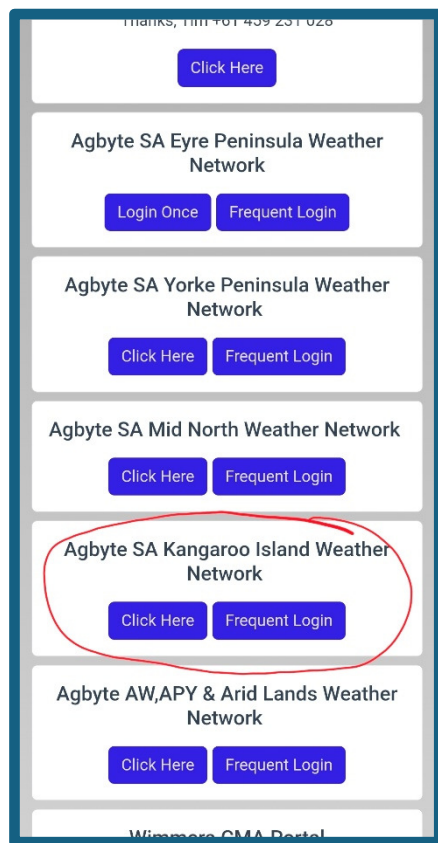

### Login

Sign In to your account

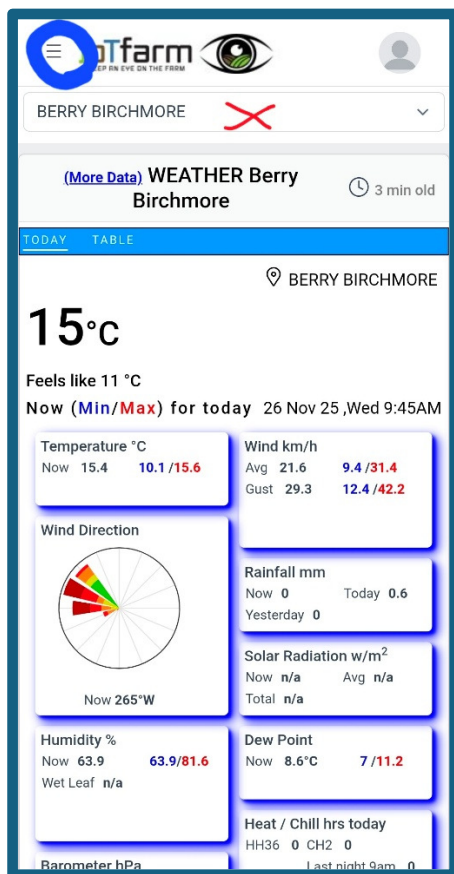

Login

Public Access

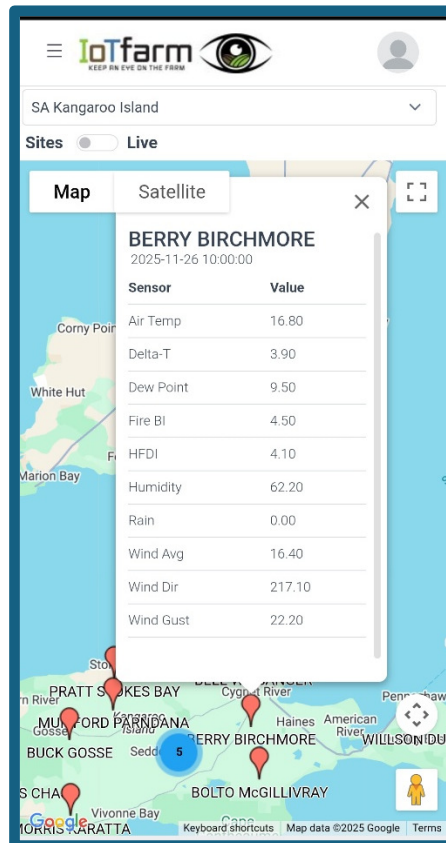

2. Scroll down to find Kangaroo Island Weather Network, select Frequent login and then follow the instructions on the page to save the page to your phone as an app

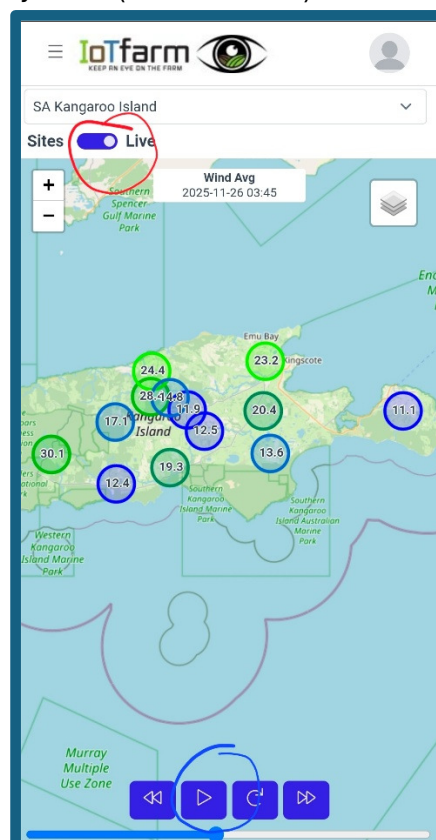

3. Once logged in, you can select the site you want to view from the drop down menu marked with a red X. The main menu is accessed from the 3 bars on the top LHS circled in blue

4. From the main menu, select Maps to take you to the spatial map of all KI sites. You can click on a pin mark to see the current readings from that site.

5. Clicking on the Sites/Live button (circled in red) will give a live view where you can play the past 24hrs of selected sensor data. Click the Play arrow (circled in blue)

6. Clicking on the *Layers* button (3 squares on top RHS) will bring up various sensors to view, scroll up and down to select. Weather radar can also be selected here. Only latest readings will be displayed, sometimes the last timestamp will be missing some sites as they haven't yet updated
