THE DRAFT MACHINE by BERE SPUMANTI is a semi-professional, compact system specially designed for instant cooling and dispensing of wine, Prosecco, Aperol, beer, cocktails, and non-alcoholic beverages in various environments:

- at home,
- in restaurants and bars,
- at weddings and outdoor events,
- at festivals,
- during trade fairs and industry exhibitions,
- at events and in catering.

100% made in Italy, the system combines:

- elegant design,
- thoughtful functionality,
- reliability and ease of use.

ECOLOGY AND LOGISTICS

a modern approach to beverage serving

THE DRAFT MACHINE by BERE SPUMANTI represents a new culture of beverage serving that:

- eliminates the need for glass bottles,
- significantly reduces transportation and disposal costs,
- uses kegs from two of the largest producers in Europe,
- relies on eco-friendly logistics partners,
- reduces CO₂ emissions and packaging waste.

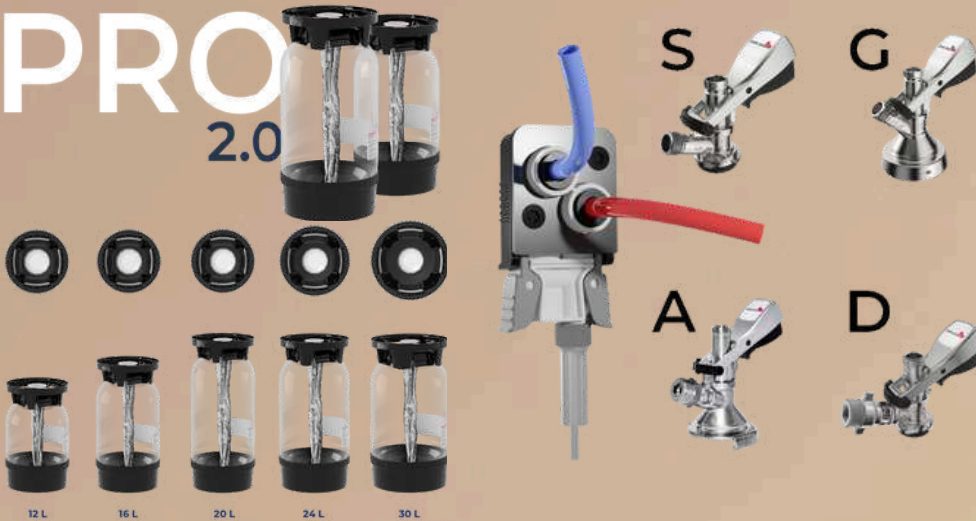

STORAGE AND DURABILITY —

longer freshness, greater reliability

POLYKEG

PRO 2.0

Thanks to the use of Polykeg PRO 2.0 kegs with multilayer internal protection:

- the beverage stays fresh for up to 25 days after opening,
- there is no contact with oxygen, light, or external factors,
- the kegs are compact and easy to handle,
- available in plastic versions of 12 / 16 / 20 / 24 / 30 liters.

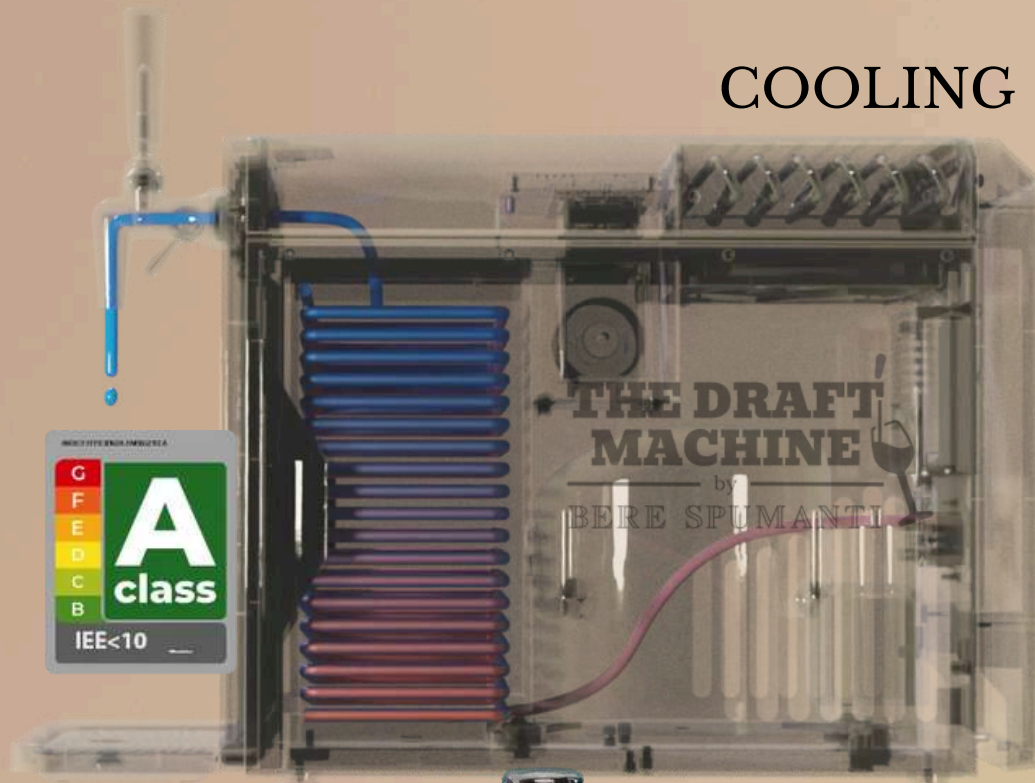

CONNECTION — in just

seconds, with no errors or extra staff needed

New patented PK connector

- Connects in seconds — even without prior experience
- No risk of errors, underpouring, or overflow
- Compatible with K, A, S, and D valves (via adapters)
- Built-in 2-in-1 hose for separate gas and product lines
- All materials are certified for food contact
- Thanks to the known keg volume, you can accurately calculate servings and profit — with zero waste.

COOLING

Instant cooling — regardless of keg temperature

The integrated instant cooling system ensures the perfect serving temperature in any situation:

- 18 meters of aluminum cooling coil
- Efficiency — up to 25 liters per hour
- Can be connected to a keg at room temperature
- From the first to the last glass — perfectly chilled drink
- Energy efficiency class A — economical and environmentally friendly

CONNECTOR: Lightweight. Safe. Universal.

2 in 1

It's never been this easy before.

In every dispensing system — whether for beer, wine, or soft drinks — the connection between the keg and the tap system is crucial.

That's why we developed a special connector that is:

- Hygienic – easy to clean, leaves no beverage residue, made from food-grade materials
- Safe – even a beginner can connect the keg in just a few seconds without any problems
- Lightweight – over 90% made from durable plastics, making it one of the lightest on the market

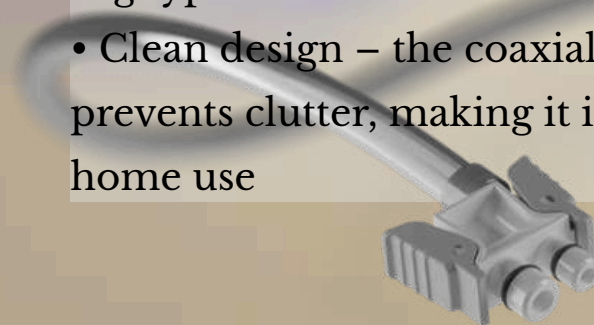

All adapters are available at berespumanti.pl

The innovative 2-in-1 hose is the perfect solution for those who want to dispense gas and beverage separately.

It offers exceptional flexibility, easily withstands high pressure and intensive use.

Certified for food contact, it guarantees maximum safety during pouring.

- Flexible – easy to arrange, discreet, and helps keep the counter tidy
- Adaptive – the set includes two hoses of different lengths, compatible with various keg types
- Clean design – the coaxial construction prevents clutter, making it ideal even for home use

Where it works best:

The THE DRAFT MACHINE by BERE SPUMANTI system performs perfectly across a wide range of business and event formats — wherever style, speed, and serving convenience matter most. It excels in restaurants and bars, where it helps reduce service time and increase profit margins.

In nightclubs, the device ensures instant pouring of cocktails and sparkling wines with a “wow” effect, while at weddings and banquets it serves as a stylish and practical alternative to traditional bottle service.

Festivals and large-scale events benefit from its mobility and high efficiency, while in catering and outdoor events THE DRAFT MACHINE is appreciated for its compact size, independence, and easy setup in any conditions.

The system is also perfect for trade shows and tastings, where aesthetics, consistent quality of serving, and minimal staff involvement are key.

THE DRAFT MACHINE is not just a stylish device — it's a practical tool for optimizing costs and increasing profits. Thanks to the keg dispensing system, the cost per serving can be reduced by up to 50% compared to traditional bottle service.

The serving speed doubles, which is crucial during peak hours and large-scale events. At the same time, all losses caused by underpouring or overpouring are completely eliminated, as the system operates with precision and consistency.

Another advantage is the elimination of glass and packaging waste, reducing disposal costs and enhancing the venue's eco-friendly image.

Keg capacities of 20 or 24 liters make it easy to monitor consumption and accurately forecast sales — an optimal format that Bere Spumanti provides to its clients.

We've thought of everything!

The set includes a complete disinfection kit...

When purchasing the THE DRAFT MACHINE dispensing system, you receive a complete disinfection kit included — allowing you to maintain the device's cleanliness and hygiene right from the start, with no additional costs.

The included powder is sufficient for 20 full sanitation cycles. It is specifically formulated for efficient and quick cleaning of all key components: the connector, the 2-in-1 hose, and the entire dispensing system. The process is extremely simple and requires no special skills — everything is intuitive and user-friendly.

When the disinfectant runs out, you can easily purchase a replacement kit anytime in our accessories section.

FLEXIBLE FORMS OF COOPERATION

THE DRAFT MACHINE by BERE SPUMANTI offers a variety of collaboration models tailored to the needs of venues of all sizes. The device can be purchased outright if you plan to use it permanently, or rented for specific events such as weddings, festivals, or trade fairs.

For companies looking to promote their own brand, a white-label option is available — you can use our technology under your own logo and customized visual design.

We also offer the possibility to receive the device free of charge, provided that kegs are purchased regularly under agreed terms. This makes implementing THE DRAFT MACHINE exceptionally accessible and convenient.

CUSTOMIZATION AND DIGITAL FEATURES

Each device can be customized to match the style and identity of your brand. We offer personalization of the casing, color scheme, and handles so that the system perfectly complements your venue décor or event stand.

An integrated NFC tag provides instant access to an interactive menu, promotions, beverage descriptions, or multimedia materials — a modern feature that attracts guests' attention and increases sales.

A full branding option is also available — logo, colors, finish — everything to make THE DRAFT MACHINE an integral part of your concept.
